

11.6.5 Straightening Walls

At this point, corner posts are plumb and top plates are doubled. Now, the wall needs to be straightened and braced between the corners. Obtain three blocks of the same thickness. Tack one at each end of the wall. Tightly stretch a line between the two blocks. Using the third block as a gauge, align the wall and brace it at intervals. Be careful that the gauge comes up to, but does not touch, the line. If it touches the line, the line is no longer straight!

This procedure is a two-person job as described. It is difficult for one person to hold the wall while securing the brace. Some carpenters use a manufactured brace that can be adjusted to align the wall. Others fashion spring braces on the job.

11.7 Tri-Level and Split-Level Framing

Tri-level and split-level housing presents special challenges in wall framing. Generally, a platform type of

construction is used. However, the floor joists for upper levels may be carried on ribbons let into the studs. The plans prescribe the type of construction. They should also include calculations of distances between floor levels. When working with split-level designs, a good carpenter prepares accurate story poles that show full-size layouts of these vertical distances for all levels of the building.

11.8 Special Framing

Framing carpenters are sometimes asked to build structures with special features. It helps if these features are carefully engineered and detailed by an architect. In such cases, construction details are included in the plans. When they are not, a carpenter must develop the plan.

Most bay windows are prefabricated by the window manufacturer. However, a carpenter may be asked to build a bay window. When asked to do so, the carpenter must visualize the details of construction, lay out and construct the floor frame to carry the project, and build the wall and roof frame. See Figure 11-31.

National Forest Products Assn.

Figure 11-31. Traditional framing for a bay window. To illustrate how joists are extended over the sill, the subfloor is not shown here. Joists at either side of the extension should be doubled.
