Modern Perspectives In Inorganic Crystal Chemistry:

Modern Perspectives in Inorganic Crystal Chemistry Erwin Parthe, 2014-01-15 **Modern Perspectives in Inorganic Crystal Chemistry** Erwin Parthé, 1992 This book contains the contributions of 13 well known specialists in the field of solid state chemistry who had been invited as lecturers at a 1992 NATO Advanced Study Institute in Erice Sicily The chapters of a more general character concern the use of the space group subgroup relationships for the recognition of structure families the crystal chemical formulae which is a way of denoting simple crystal chemical information in a condensed form the concepts of atom coordination atom volume and charge transfer and the physicist's view of the bond strength in the solid which is measured by the crystal orbital overlap population It is demonstrated for the case of ionic compounds that the bond valence method is superior to the old sum of radii method for the prediction of interatomic distances **Inorganic**

Structural Chemistry Ulrich Müller, 2007-09-27 The essential introduction to the understanding of the structure of inorganic solids and materials This revised and updated 2nd Edition looks at new developments and research results within Structural Inorganic Chemistry in a number of ways special attention is paid to crystalline solids elucidation and description of the spatial order of atoms within a chemical compound Structural principles of inorganic molecules and solids are described through traditional concepts modern bond theoretical theories as well as taking symmetry as a leading principle

Chemistry II, 2013-07-23 Comprehensive Inorganic Chemistry II Nine Volume Set reviews and examines topics of relevance to today's inorganic chemists. Covering more interdisciplinary and high impact areas, Comprehensive Inorganic Chemistry II includes biological inorganic chemistry, solid state chemistry, materials chemistry, and nanoscience. The work is designed to follow on with a different viewpoint and format from our 1973 work, Comprehensive Inorganic Chemistry, edited by Bailar, Emelius, Nyholm, and Trotman-Dickenson, which has received over 2 000 citations. The new work will also complement other recent Elsevier works in this area, Comprehensive Coordination Chemistry and Comprehensive Organometallic Chemistry, to form a trio of works covering the whole of modern inorganic chemistry. Chapters are designed to provide a valuable long standing scientific resource for both advanced students new to an area and researchers who need further background or answers to a particular problem on the elements, their compounds, or applications. Chapters are written by teams of leading experts under the guidance of the Volume Editors and the Editors in Chief. The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field. The chapters will not provide basic data on the elements, which is available from many sources and the original work, but instead concentrate on applications of the elements and their compounds. Provides a comprehensive review which serves to put many advances in perspective and allows the reader to make connections to related fields such as biological inorganic chemistry, materials chemistry, solid state chemistry, and nanoscience. Inorganic chemistry is rapidly developing, which brings about the need for a reference resource such as this that summarises recent developments and simultaneously provide background information. Forms the new definitive source for researchers interested in elements and their applications, completely replacing the highly cited first edition which published in 1973. TYPIX — Standardized Data and Crystal Chemical Characterization of Inorganic Structure Types Erwin Parthé, Louise Gelato, Bernard Chabot, Marinella Penzo, Karin Cenzual, Roman Gladyshevskii, 2013-11-11 TYPIX is a critical compilation of crystallographic data prepared by E Parth at the University of Geneva. It contains over 3200 compounds representative of the structure types found among inorganic compounds. This work contains condensed crystal chemical information about individual structure types as well as an extensive chapter on the crystal chemistry of particular structure families. The aim of the compilation is to clarify and classify published data for intermetallic and other inorganic structures. Types found exclusively with halides or oxides are only included for a few special cases. It provides a tool for additional crystal chemical studies and the development of new materials. **Modular Aspects of Minerals** Stefano Merlino, 1997-01-01 **Advances in Inorganic Chemistry**, 1997-01-16 Advances in Inorganic Chemistry presents timely and informative summaries of the current progress in a variety of subject areas within inorganic chemistry, ranging from bioinorganic to solid state. This acclaimed series features reviews written by experts in the area and is an indispensable reference to advanced researchers. Each volume of Advances in Inorganic Chemistry contains an index and each chapter is fully referenced. Study of New Ternary Rare-Earth

Intermetallic Germanides with Polar Covalent Bonding Riccardo Freccero, 2020-11-16 The thesis focuses on the syntheses structural characterizations and chemical bonding analyses for several ternary R M Ge R rare earth metal M another metal intermetallics The challenges in understanding the main interactions governing the chemistry of these compounds which lead to our inability to predict their formation structure and properties are what provided the motivation for this study In particular the R_2MGe_6 M Li Mg Al Cu Zn Pd Ag R_4MGe_{10} x M Li Mg $R_2Pd_3Ge_5$ $Lu_5Pd_4Ge_8$ $Lu_3Pd_4Ge_4$ and Yb_2PdGe_3 phases were synthesized and structurally characterized Much effort was put into the stabilization of metastable phases employing the innovative metal flux method and into the accurate structure solution of twinned crystals Cutting edge position space chemical bonding techniques were combined with new methodologies conceived to correctly describe the Ge M Ge La and also La M polar covalent interactions for the La_2MGe_6 M Li Mg Al Cu Zn Pd Ag series The present results constitute a step forward in our comprehension of ternary germanide chemistry as well as providing a good playground for further investigations

Crystallography of Modular Materials Giovanni Ferraris, Emil Makovicky, Stefano Merlino, 2004-03-25 This is the first book to provide a comprehensive treatment of theories and applications in the rapidly expanding field of the crystallography of modular materials Molecules are the natural modules from which molecular crystalline structures are built Most inorganic structures however are infinite arrays of atoms and some kinds of surrogate modules e g coordination polyhedra are usually used to describe them In recent years the attention has been focused on complex modules as the basis for a systematic description of polytypes and homologous polysomatic series modular structures This representation is applied to the modelling of unknown structures and understanding nanoscale defects and intergrowths in materials The Order Disorder OD theory is fundamental to developing a systematic theory of polytypism dealing with those structures based on both ordered and disordered stacking of one or more layers Twinning at both unit cell and micro scale together with disorder causes many problems demons for computer based methods of crystal structure determination This book develops the theory of twinning with the inclusion of worked examples converting the demons into useful indicators for unravelling crystal structure In spite of the increasing use of the concepts of modular crystallography for characterising understanding and tailoring technological crystalline materials this is the first book to offer a unified treatment of the results which are spread across many different journals and original papers published over the last twenty years

Physical Metallurgy R.W. Cahn, P. Haasen, 1996-02-09 This is the fourth edition of a work which first appeared in 1965 The first edition had approximately one thousand pages in a single volume This latest volume has almost three thousand pages in 3 volumes which is a fair measure of the pace at which the discipline of physical metallurgy has grown in the intervening 30 years Almost all the topics previously treated are still in evidence in this version which is approximately 50% bigger than the previous edition All the chapters have been either totally rewritten by new authors or thoroughly revised and expanded either by the third edition authors alone or jointly with new co authors Three chapters on new topics have been added

dealing with dry corrosion oxidation and protection of metal surfaces the dislocation theory of the mechanical behavior of intermetallic compounds and most novel a chapter on polymer science for metallurgists which analyses the conceptual mismatch between metallurgists and polymer scientists way of looking at materials Special care has been taken throughout all chapters to incorporate the latest experimental research results and theoretical insights Several thousand citations to the research and review literature are included in this edition There is a very detailed subject index as well as a comprehensive author index The original version of this book has long been regarded as the standard text in physical metallurgy and this thoroughly rewritten and updated version will retain this status

Advances in Organic Corrosion Inhibitors and Protective Coatings

Ioannis Kartsonakis, 2021-09-01 The interaction of metal with its environment that results in its chemical alteration is called metallic corrosion According to the literature corrosion is classified to two types uniform and localized corrosion Intervention in either in the alloy environment or in the alloy structure can provide the corrosion protection of metallic materials Furthermore the interference in the metal alloy environment can be conducted with the utilization of cathodic or anodic protection via the corresponding inhibitors Therefore the most common categorization is cathodic anodic and mixed type inhibitors taking into account which half reaction they suppress during corrosion phenomena The majority of the organic inhibitors are of mixed type and perform through chemisorption In order to update the field of the corrosion
