Structural Bioinformatics Jenny Gu, Philip E. Bourne, 2011-09-20 Structural Bioinformatics was the first major effort to show the application of the principles and basic knowledge of the larger field of bioinformatics to questions focusing on macromolecular structure such as the prediction of protein structure and how proteins carry out cellular functions and how the application of bioinformatics to these life science issues can improve healthcare by accelerating drug discovery and development Designed primarily as a reference the first edition nevertheless saw widespread use as a textbook in graduate and undergraduate university courses dealing with the theories and associated algorithms resources and tools used in the analysis prediction and theoretical underpinnings of DNA RNA and proteins This new edition contains not only thorough updates of the advances in structural bioinformatics since publication of the first

edition but also features eleven new chapters dealing with frontier areas of high scientific impact including sampling and search techniques use of mass spectrometry genome functional annotation and much more Offering detailed coverage for practitioners while remaining accessible to the novice Structural Bioinformatics Second Edition is a valuable resource and an excellent textbook for a range of readers in the bioinformatics and advanced biology fields Praise for the previous edition This book is a gold mine of fundamental and practical information in an area not previously well represented in book form Biochemistry and Molecular Education destined to become a classic reference work for workers at all levels in structural bioinformatics recommended with great enthusiasm for educators researchers and graduate students BAMBED a useful and timely summary of a rapidly expanding field Nature Structural Biology a terrific job in this timely creation of a compilation of articles that appropriately addresses this issue Briefings in Bioinformatics Research in Computational Molecular Biology Satoru Miyano,Jill Mesirov,Simon Kasif,Sorin Istrail,Pavel Pevzner,Michael Waterman,2005-04-28 This volume contains the papers presented at the 9th Annual International Conference on Research in Computational Molecular Biology RECOMB 2005 which was held in Cambridge Massachusetts on May 14 18 2005 The RECOMB conference series was started in 1997 by Sorin Istrail Pavel Pevzner and Michael Waterman The list of previous meetings is shown below in the section Previous RECOMB Meetings RECOMB 2005 was hosted by the Broad Institute of MIT and Harvard and Boston University's Center for Advanced genomic Technology and was excellently organized by the Organizing Committee Co chairs Jill Mesirov and Simon Kasif This year 217 papers were submitted of which the Program Committee selected 39 for presentation at the meeting and inclusion in this proceedings Each submission was refereed by at least three members of the Program Committee After the completion of the referees reports an extensive Web based discussion took place for making decisions From RECOMB 2005 the Steering Committee decided to publish the proceedings as a volume of Lecture Notes in Bioinformatics LNBI for which the founders of RECOMB are also the editors The prominent volume number LNBI 3500 was assigned to this proceedings The RECOMB conference series is closely associated with the Journal of Computational Biology which traditionally publishes special issues devoted to presenting full versions of selected conference papers The RECOMB Program Committee consisted of 42 members as listed on a separate page I would like to thank the RECOMB 2005 Program Committee members for their dedication and hard work Bioinformatics Christine Orengo,David Jones,Janet Thornton,2003-12-16 Bioinformatics the use of computers to address biological questions has become an essential tool in biological research It is one of the critical keys needed to unlock the information encoded in the flood of data generated by genome protein structure transcriptome and proteome research Bioinformatics Genes Proteins Computers covers both the more traditional approaches to bioinformatics including gene and protein sequence analysis and structure prediction and more recent technologies such as data mining of transcriptomic and proteomic data to provide insights on cellular mechanisms and the causes of disease Evolutionary Genetics Charles W. Fox,Jason B. Wolf,2006-04-27 Charles Fox and Jason Wolf have brought together

leading researchers to produce a cutting edge primer introducing readers to the major concepts in modern evolutionary genetics This book spans the continuum of scale from studies of DNA sequence evolution through proteins and development to multivariate phenotypic evolution and the continuum of time from ancient events that lead to current species diversity to the rapid evolution seen over relatively short time scales in experimental evolution studies Chapters are accessible to an audience lacking extensive background in evolutionary genetics but also current and in depth enough to be of value to established researchers in evolution biology

Statistical Mechanics, Protein Structure, and Protein Substrate Interactions Sebastian Doniach, 2013-11-22 A number of factors have come together in the last couple of decades to define the emerging interdisciplinary field of structural molecular biology First there has been the considerable growth in our ability to obtain atomic resolution structural data for biological molecules in general and proteins in particular This is a result of advances in technique both in x ray crystallography driven by the development of electronic detectors and of synchrotron radiation x ray sources and by the development of NMR techniques which allow for inference of a three dimensional structure of a protein in solution Second there has been the enormous development of techniques in DNA engineering which makes it possible to isolate and clone specific molecules of interest in sufficient quantities to enable structural measurements In addition the ability to mutate a given amino acid sequence at will has led to a new branch of biochemistry in which quantitative measurements can be made assessing the influence of a given amino acid on the function of a biological molecule A third factor resulting from the exponential increase in computing power available to researchers has been the emergence of a growing body of people who can take the structural data and use it to build atomic scale models of biomolecules in order to try and simulate their motions in an aqueous environment thus helping to provide answers to one of the most basic questions of molecular biology the relation of structure to function
