Multiobjective Decision Support For Environmental Management:

Multiobjective Decision Support for Environmental Management R. Janssen, 2012-12-06 Multiple criteria decision making is a major and rapidly growing field of research. Methods resulting from this field of research are used in this book to develop a Multiobjective Decision Support Systems (MODSS) for environmental management. The primary focus of the book is therefore on the issues and practicalities that arise when these methods are applied to support decisions on environmental problems. Most methods included in this book are derived from the literature on multicriteria decision making, decision analysis, and operations research. Concepts developed in management science are used to describe environmental decision processes and to define the functions of decision support. The author's work on MODSS has resulted in the development of a decision support package called DEFINITE DECisions on a FINITE set of alternatives. A demonstration version of this programme is included with the book. This Demo Disk can be run on a MS DOS compatible personal computer version 2.0 or higher, having a 3.5 inch 720 Kb disk drive and 640 Kb available RAM. *Multiobjective Decision Support for Environmental Management* Ron Janssen, 1992

Value Functions for Environmental Management E. Beinart, 2013-04-18 Environmental decisions must satisfy a multitude of objectives, and the matching of a plan, policy, or project to such objectives is a matter of both facts and value judgements. *Value Functions for Environmental Management* provides a systematic approach to the structuring and measurement of value judgements, showing how they drive the decision process and how to make them transparent and effective in support of complex decisions. The value functions that the book describes provide a scheme for the exploration of human values and a tool for transforming them into an analytical model. A clear statement can then be made of the degree to which a decision has achieved its objectives and how conflicting objectives may be addressed. This does not mean that there is no role for human judgement in the process. Complexity, often coupled with large information gaps, necessitates expert judgement, but the values adopted by the experts are themselves capable of being structured and measured according to the value function methodology presented here, even if the judgements themselves are qualitative and tentative. Value models for expert panels are also presented. The use of the methodology in practice is illustrated by examples. The book contains an extensive subject index.
