Multivariable System Identification For Process Control:

Multivariable System Identification For Process Control Y. Zhu, 2001-10-08 Systems and control theory has experienced significant development in the past few decades New techniques have emerged which hold enormous potential for industrial applications and which have therefore also attracted much interest from academic researchers However the impact of these developments on the process industries has been limited The purpose of Multivariable System Identification for Process Control is to bridge the gap between theory and application and to provide industrial solutions based on sound scientific theory to process identification problems The book is organized in a reader friendly way starting with the simplest methods and then gradually introducing more complex techniques Thus the reader is offered clear physical insight without recourse to large amounts of mathematics Each method is covered in a single chapter or section and experimental design is explained before any identification algorithms are discussed The many simulation examples and industrial case studies demonstrate the power and efficiency of process identification helping to make the theory more applicable Matlab™ M files designed to help the reader to learn identification in a computing environment are included

Process Modelling for Control Benoît Codrons, 2005-08-30 Many process control books focus on control design techniques taking the construction of a process model for granted Process Modelling for Control concentrates on the modelling steps underlying a successful design answering questions like How should I carry out the identification of my process in order to obtain a good model How can I assess the quality of a model with a view to using it in control design How can I ensure that a controller will stabilise a real process and achieve a pre specified level of performance before implementation What is the most efficient method of order reduction to facilitate the implementation of high order controllers Different tools namely system identification model controller validation and order reduction are studied in a framework with a common basis closed loop identification with a controller that is close to optimal will deliver models with bias and variance errors ideally tuned for control design As a result rules are derived applying to all the methods that provide the practitioner with a clear way forward despite the apparently unconnected nature of the modelling tools Detailed worked examples representative of various industrial applications are given control of a mechanically flexible structure a chemical process and a nuclear power plant Process Modelling for Control uses mathematics of an intermediate level convenient to researchers with an interest in real applications and to practising control engineers interested in control theory It will enable working control engineers to improve their methods and will provide academics and graduate students with an all round view of recent results in modelling for control Advances in Industrial Control aims to report and encourage the transfer of technology in control engineering The rapid development of control technology has an impact on all areas of the control discipline The series offers an opportunity for researchers to present an extended exposition of new work in all aspects of industrial control

Computer Aided Systems Theory - EUROCAST 2009 Roberto Moreno Díaz,Franz Pichler,Alexis Quesada Arencibia,2009-09-30 The concept of CAST as Computer Aided Systems Theory was introduced by F Pichler in the late 1980s to refer to computer theoretical and practical developments as tools for solving problems in system science It was thought of as the third component the other two being CAD and CAM required to complete the path from computer and systems sciences to practical developments in science and engineering Franz Pichler of the University of Linz organized the first CAST workshop in April 1988 which demonstrated the acceptance of the concepts by the scientific and technical community Next the University of Las Palmas de Gran Canaria joined the University of Linz to organize the first international meeting on CAST Las Palmas February 1989 under the name EUROCAST 89 This proved to be a very successful gathering of systems theorists computer scientists and engineers from most European countries North America and Japan It was agreed that EUROCAST international conferences would be organized every two years alternating between Las Palmas de Gran Canaria and a continental European location From 2001 the conference has been held exclusively in Las Palmas Thus successive EUROCAST meetings took place in Krems 1991 Las Palmas 1993 In bruck 1995 Las Palmas 1997 Vienna 1999 Las Palmas 2001 Las Palmas 2003 Las Palmas 2005 and Las Palmas 2007 in addition to an extra European CAST c ference in Ottawa in 1994

PID Controller Tuning Using the Magnitude Optimum Criterion Konstantinos G.

Papadopoulos,2014-11-01 An instructive reference that will help control researchers and engineers interested in a variety of industrial processes to take advantage of a powerful tuning method for the ever popular PID control paradigm This monograph presents explicit PID tuning rules for linear control loops regardless of process complexity It shows the reader how such loops achieve zero steady position velocity and acceleration errors and are thus able to track fast reference signals The theoretical development takes place in the frequency domain by introducing a general transfer function known process model and by exploiting the principle of the magnitude optimum criterion It is paralleled by the presentation of real industrial control loops used in electric motor drives The application of the proposed tuning rules to a large class of processes shows that irrespective of the complexity of the controlled process the shape of the step and frequency response of the control loop exhibits a specific performance This specific performance along with the PID explicit solution formulates the basis for developing an automatic tuning method for the PID controller parameters which is a problem often met in many industry applications temperature pH and humidity control ratio control in product blending and boiler drum level control for example The process of the model is considered unknown and controller parameters are tuned automatically such that the aforementioned performance is achieved The potential both for the explicit tuning rules and the automatic tuning method is demonstrated using several examples for benchmark process models recurring frequently in many industry applications
