## Quasars And Gravitational Lenses:

**Gravitational Lensing of Quasars** Alexander Eigenbrod, 2011-12-14 The universe in all its richness diversity and complexity is populated by a myriad of intriguing celestial objects Among the most exotic of them are gravitationally lensed quasars A quasar is an extremely bright nucleus of a galaxy and when such an object is gravitationally lensed multiple images of the quasar are produced this phenomenon of cosmic mirage can provide invaluable insights on burning questions such as the nature of dark matter and dark energy After presenting the basics of modern cosmology *Gravitational Lensing of Quasars* describes active galactic nuclei the theory of gravitational lensing and presents a particular numerical technique to improve the resolution of astronomical data The book then enters the heart of the subject with the description of important applications of gravitational lensing of quasars such as the measurement of the famous Hubble constant the determination of the dark matter distribution in galaxies and the observation of the mysterious inner parts of quasars with much higher resolutions than those accessible with the largest telescopes This book gives an overview of the current status of research in the field of gravitationally lensed quasars It also gives some insights about the way this research is conducted in practice and presents real data and results obtained with several high technology instruments of the Very Large Telescope of the European Southern Observatory

**Quasars and Gravitational Lenses**, 1983 *Quasars and Gravitational Lenses* Université de Liège. Institut d'astrophysique, 1983 [Gravitational Lensing](#) Yannick Mellier, Bernard Fort, Geneviève Soucaïl, 1990 This is an exhaustive review of our theoretical and observational knowledge of gravitational lensing 10 years after the discovery of the first lensed quasar Q0957 561 Gravitational optics optical infrared and radio observations of quasar lens candidates microlensing arcs in clusters of galaxies and radio rings are presented In particular the continuing survey of quasar lens candidates the new measurement of the time delay in 0957 561 the suspended microlensing effect through the galaxy 2237 030 as well as the discovery of new arcs and the measurement of new redshifts for two of them are presented Numerous papers on the modelling of arcs and rings show how it should be possible to probe dark matter with these unexpected gravitational telescopes Finally tables summarize all the lens candidates we know today

**Gravitational Lenses** P. Schneider, J. Ehlers, E.E. Falco, 2013-06-29 Light observed from distant objects is found to be deflected by the gravitational field of massive objects near the line of sight an effect predicted by Einstein in his first paper setting forth the general theory of relativity and confirmed by Eddington soon afterwards If the source of the light is sufficiently distant and bright and if the intervening object is massive enough and near enough to the line of sight the gravitational field acts like a lens focusing the light and producing one or more bright images of the source This book by renowned researchers in the field begins by discussing the basic physics behind gravitational lenses the optics of curved space time It then derives the appropriate equations for predicting the properties of these lenses In addition it presents up to date observational evidence for gravitational lenses and describes the particular properties of the observed cases The authors also discuss applications of

the results to problems in cosmology      **Astronomy and Astrophysics Abstracts** S. Böhme, W. Fricke, H. Hefele, I. Heinrich, W. Hofmann, D. Krahn, V. R. Matas, L. D. Schmadel, G. Zech, 2013-12-14 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of the literature concerning all aspects of astronomy astrophysics and their border fields It is devoted to the recording summarizing and indexing of the relevant publications throughout the world Astronomy and Astrophysics Abstracts is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union Volume 34 records literature published in 1983 and received before February 17 1984 Some older documents which we received late and which are not surveyed in earlier volumes are included too We acknowledge with thanks contributions of our colleagues all over the world We also express our gratitude to all organizations observatories and publishers which provide us with complimentary copies of their publications Starting with Volume 33 all the recording correction and data processing work was done by means of computers The recording was done by our technical staff members Ms Helga Ballmann Ms Mona El Choura and Ms Monika Kohl Mr Martin Schlotelburg and Mr Ulrich Oberall supported our task by careful proofreading It is a pleasure to thank them all for their encouragement Heidelberg March 1984 The Editors Contents Introduction Concordance Relation ICSU AB AAA 3 Abbreviations 10 Periodicals Proceedings Books Activities 001 Periodicals 15 002 Bibliographical Publications Documentation Catalogues Atlases 50 003 Books 58 004 History of Astronomy 67 005 Biography 71 006 Personal Notes 73 007 Obituaries      *Quasars and Active Galactic Nuclei* Ajit K. Kembhavi, Jayant V. Narlikar, 1999-03-11 The latest observations and theoretical models are combined in this clear pedagogic textbook for advanced undergraduates and graduate students      **Atlas of Astronomical Discoveries** Govert Schilling, 2011-04-11 Offers a unique combination of informative text magnificent illustrations and stylish design Examines the 100 most important discoveries since the invention of the telescope Features spectacular photographs taken with the largest telescopes on Earth and in space that portray distant corners of the universe Author Govert Schilling is a renowned astronomy journalist and science communicator In his Atlas of Astronomical Discoveries astronomy journalist Govert Schilling tells the story of 400 years of telescopic astronomy He looks at the 100 most important discoveries since the invention of the telescope Doing what Schilling does best he takes the reader on an adventure through both space and time Photographs and amazing pictures line the pages of this book offering the reader an escape from this world and an invitation to a world far beyond what the unaided human eye can detect      **Gravitational Lensing: An Astrophysical Tool** Frederic Courbin, Dante Minniti, 2008-01-11 Gravitational lensing is by now sufficiently well understood that it can be used as a tool of investigation in other astrophysical areas Applications include the determination of the Hubble constant probing the dark matter context of galaxies and the mapping of the universe to the identification of otherwise invisible large scale structures Each chapter of the book covers in a self contained manner a subfield of gravitational lensing with the double aim of describing in a simple way the basics of the theory and of reviewing the most recent developments as well as applications

foreseen in the near future The book will thus be particularly useful as a high level textbook for nonspecialist researchers and advanced students wishing to become familiar with the field all the way up to the forefront of research

**Quasar Astronomy** Daniel W. Weedman, 1988-04-14 A current account of quasar astronomy that not only summarizes existing results from various techniques but refers to the potentialities of new instruments All aspects of quasar spectroscopy are discussed and techniques for analyzing quasar data are summarized

*Gravitational Lensing* Yannick Mellier, Bernard Fort, Genevieve Soucail, 2014-03-12 This is an exhaustive review of our theoretical and observational knowledge of gravitational lensing 10 years after the discovery of the first lensed quasar Q0957 561 Gravitational optics optical infrared and radio observations of quasar lens candidates microlensing arcs in clusters of galaxies and radio rings are presented In particular the continuing survey of quasar lens candidates the new measurement of the time delay in 0957 561 the suspended microlensing effect through the galaxy 2237 030 as well as the discovery of new arcs and the measurement of new redshifts for two of them are presented Numerous papers on the modelling of arcs and rings show how it should be possible to probe dark matter with these unexpected gravitational telescopes Finally tables summarize all the lens candidates we know today

**An Introduction to General Relativity and Cosmology** Jerzy Plebanski, Andrzej Krasinski, 2024-05-31 Experts Plebanski and Krasinski provide a thorough introduction to the tools of general relativity and relativistic cosmology Assuming familiarity with advanced calculus classical mechanics electrodynamics and special relativity the text begins with a short course on differential geometry taking a unique top down approach Starting with general manifolds on which only tensors are defined the covariant derivative and affine connection are introduced before moving on to geodesics and curvature Only then is the metric tensor and the pseudo Riemannian geometry introduced specialising the general results to this case The main text describes relativity as a physical theory with applications to astrophysics and cosmology It takes the reader beyond traditional courses on relativity through in depth descriptions of inhomogeneous cosmological models and the Kerr metric Emphasis is given to complete and clear derivations of the results enabling readers to access research articles published in relativity journals

*Astronomy in India: A Historical Perspective* Thanu Padmanabhan, 2014-08-20 India has a strong and ancient tradition of astronomy which seamlessly merges with the current activities in Astronomy and Astrophysics in the country While the younger generation of astronomers and students are reasonably familiar with the current facilities and the astronomical research they might not have an equally good knowledge of the rich history of Indian astronomy This particular volume brought out as a part of the Platinum Jubilee Celebrations of Indian National Science Academy concentrates on selected aspects of historical development of Indian astronomy in the form of six invited chapters Two of the chapters by Balachandra Rao and M S Sriram cover ancient astronomy and the development of calculus in the ancient Kerala text Yuktibhasa The other four chapters by B V Sreekantan Siraj Hasan Govind Swarup and Jayant Narlikar deal with the contemporary history of Indian astronomy covering space astronomy optical astronomy radio astronomy and developments in

relativistic astrophysics These chapters written by experts in the field provide an in depth study of the subject and make this volume quite unique *Astronomy* Michael Zeilik, 2002-01-14 The ninth edition of this successful textbook describes the full range of the astronomical universe and how astronomers think about the cosmos *The Century of Space Science* J.A. Bleeker, Johannes Geiss, M. Huber, 2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end *The Century of Space Science* a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar Lüst and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection **Quasars, AGNs, and Related Research Across 2000** Lodewijk Woltjer, G. Setti, J.-P. Swings, 2001-07-17 The proceedings of the international conference held in honor of Lodewijk Woltjer focus on the physics origin and space distribution of AGNs and quasars and their relationship to the environment a very wide subject which has attracted much of Lodewijk Wolter's research interest A number of lectures were also dedicated to reviewing the recent observational advances and those that may be attained by the introduction of new and powerful astronomical instrumentation both from the ground and from space in recognition of the central role played by L. Woltjer in the promotion of the ESO VLT and of his involvement in shaping ESA's space programme *Horizon 2000* **Literature 1988, Part 1** U. Esser, H. Hefele, Inge Heinrich, W. Hofmann, D. Krahn, V. R. Matas, Dr. Lutz D. Schmadel, G. Zech, 2013-11-11 From the reviews *Astronomy and Astrophysics Abstracts* has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world *Space Science Reviews* 1 Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes

The Observatory Magazine 2      **Hubble Space Telescope** Space Telescope Science Institute (U.S.),1991      **Gravity from the Ground Up** Bernard Schutz,2003-12-04 This book invites the reader to understand our Universe not just marvel at it From the clock like motions of the planets to the catastrophic collapse of a star into a black hole gravity controls the Universe Gravity is central to modern physics helping to answer the deepest questions about the nature of time the origin of the Universe and the unification of the forces of nature Linking key experiments and observations through careful physical reasoning the author builds the reader s insight step by step from simple but profound facts about gravity on Earth to the frontiers of research Topics covered include the nature of stars and galaxies the mysteries of dark matter and dark energy black holes gravitational waves inflation and the Big Bang Suitable for general readers and for undergraduate courses the treatment uses only high school level mathematics supplemented by optional computer programs to explain the laws of physics governing gravity      Discovering the Universe William J. Kaufmann,Neil F. Comins,2008-12-26 Discovering the Universe From the Stars to the Planets engages students with an inquiry based exploration of the universe and the scientific process Developed with a big picture approach the text first explains how the stars the galaxies and the entire universe formed and then discusses planets and other components of our solar system Students follow this natural conceptual progression within a proven learning method designed to address misconceptions and build a deep understanding of science and the world around us
