Statistics in the Law of Evidence Nicholas Lennings, 2024-11-14 This book evaluates the role played by statistical evidence in litigation Despite the increasing prevalence of statistical evidence in modern litigation how such evidence should be admitted and used by courts is often inconsistent and widely criticised Accepting that statistical evidence can lead to more accurate decisions the book proposes criteria that could allow courts to decide that statistical evidence is good for fact finding The many and varied scholarly debates regarding statistical evidence have by and large avoided judicial attention Unlike previous works this book contextualises those debates in the language and practice of evidence law focusing principally on Australia as well as the UK and the USA It does so by identifying that the controversy around statistical evidence follows the three tiered statistical syllogism underlying statistical inference first whether statistical evidence is capable of establishing an association between phenomena in a state of nature second inferring that phenomena to an individual from the general association and third whether statistical evidence can be sufficient for proof of contested facts Objections are said to arise at each level of this syllogism and by mapping these objections onto evidence law the book

argues that a pathway for the judicial evaluation of statistical evidence can be constructed **Cumulative List of**
