Dynamics of Marketing in African Nations Sonny Nwankwo, Joseph F.

Aiyeku, 2002-05-30 Consider Africa not with pre established mindsets unexamined assumptions and bland generalizations but for what Africa actually is a setting in which marketers can gather new ideas and test old ones and perhaps emerge with a more varied certain sense of what the marketing enterprise itself is all about Nwankwo Aiyeku and their contributing authors all specialists with a remarkably wide range of experience and viewpoints uncover the unexpected factors that they are certain will determine the success of selling just about any product or service to established or developing African nations Original eclectic and agenda setting their book provides a startling insight into the dynamics of marketing in this fascinating region of the world as it continues to initiate the new macroeconomic and political reforms that are transforming the African continent into an important player on the international business scene Nwankwo and Aiyeku see their book as a welcome attempt to identify and explore the institutional processes in which not only the study but also the practice of marketing is embedded They work with three main themes the processual issues including theory development and the reconceptualization of conventional paradigms the nature of the interrelationships that shape the dynamics of marketing overall and the context specific dimensions of marketing generally its marketing operations As the volume editors state By and large African nations present new contexts and new strategic challenges As they become focused certain general approaches as to how various characteristics influence marketing behaviors have to be established This book through addressing these contextual issues provides a better focus for creating a relevant set of marketing activities in African situations

From Fires to Oceans: Dynamics of Fire-Derived Organic Matter in Terrestrial and Aquatic Ecosystems Samuel Abiven, Cristina Santín, 2019-05-09 Fire derived organic matter also known as pyrogenic carbon PyC is ubiquitous on Earth It can be found in soils sediments water and air In this wide range of environments fire derived organic matter represents a key component of the organic matter pool and in many cases the largest identifiable group of organic compounds PyC is also one of the most persistent organic matter fractions in the ecosystems and its study is therefore particularly relevant for the global carbon cycle From its production during vegetation fires to its transfer into soils sediments and waters PyC goes through different transformations both abiotic and biotic Contrary to early assumptions PyC is not inert and interacts strongly with the environment evidence of microbial decomposition oxidation patterns and interactions with minerals have been described in different matrices PyC travels across these different environments and it is modified chemically and physically but remains persistent This Research Topic explores important questions in our understanding of fire derived organic matter from the characterization and quantification of PyC components to the transformation and mobilization processes taking place on

terrestrial and aquatic ecosystems The studies compiled here provide novel and often unexpected results They all answer some of the questions posed and more importantly provide scope for many more

New Models for Ecosystem Dynamics and Restoration Richard J. Hobbs, Katharine N. Suding, Peter Society for Ecological Restoration International, 2013-03-19 As scientific understanding about ecological processes has grown the idea that ecosystem dynamics are complex nonlinear and often unpredictable has gained prominence Of particular importance is the idea that rather than following an inevitable progression toward an ultimate endpoint some ecosystems may occur in a number of states depending on past and present ecological conditions The emerging idea of restoration thresholds also enables scientists to recognize when ecological systems are likely to recover on their own and when active restoration efforts are needed Conceptual models based on alternative stable states and restoration thresholds can help inform restoration efforts New Models for Ecosystem Dynamics and Restoration brings together leading experts from around the world to explore how conceptual models of ecosystem dynamics can be applied to the recovery of degraded systems and how recent advances in our understanding of ecosystem and landscape dynamics can be translated into conceptual and practical frameworks for restoration In the first part of the book background chapters present and discuss the basic concepts and models and explore the implications of new scientific research on restoration practice The second part considers the dynamics and restoration of different ecosystems ranging from arid lands to grasslands woodlands and savannahs to forests and wetlands to production landscapes A summary chapter by the editors discusses the implications of theory and practice of the ideas described in preceding chapters New Models for Ecosystem Dynamics and Restoration aims to widen the scope and increase the application of threshold models by critiquing their application in a wide range of ecosystem types It will also help scientists and restorationists correctly diagnose ecosystem damage identify restoration thresholds and develop corrective methodologies that can overcome such thresholds
