Dibbern, 2013-03-09 As the information systems IS outsourcing trend has gained momentum it is prudent to stop and reflect on several critical questions What are the actual intentions of organizations for evaluating and then choosing outsourcing What problems are these organizations attempting to solve with outsourcing Do vendors satisfactorily provide solutions to these problems What are the advantages and disadvantages of outsourcing If an organization decides to outsource are there strategies which can be employed to assure an effective outsourcing arrangement What happens if outsourcing does not work for a particular company can it return to a non outsourced state and at what cost How do new sourcing trends like application service providing challenge the traditional IS outsourcing life cycle Questions such as these motivated the conceptual development of this book **The Rationale Behind Strategic Alliances in Application Service Provision** D.

E. Sofiane Tebboune, 2008 Risk Assessment and Management in Pervasive Computing: Operational, Legal, Ethical, and Financial Perspectives Godara, Varuna, 2008-10-31 Provides extensive information about pervasive computing and its implications from various perspectives so that current and future pervasive service providers can make responsible decisions about where when and how to use this technology *Business Strategies for Information Technology Management* Kalle Kangas, 2003-01-01 This business guide presents theoretical and empirical research on the business value of information technology IT and introduces strategic opportunities for using IT management to increase organizational performance Implementation management is addressed with attention to customer relationship outsourcing decision support systems and information systems strategic planning Domestic international and multinational business contexts are covered **Towards Sustainable Society on Ubiquitous Networks** Makoto Oya, Ryuya Uda, Chizuko Yasunobu, 2008-08-15 The massive growth of the Internet has made an enormous amount of information available to us However it is becoming very difficult for users to

acquire an applicable one. Therefore, some techniques such as information filtering have been introduced to address this issue. Recommender systems filter information that is useful to a user from a large amount of information. Many e-commerce sites use recommender systems to filter specific information that users want out of an overload of information.² For example, Amazon.com is a good example of the success of recommender systems.¹ Over the past several years, a considerable amount of research has been conducted on recommendation systems. In general, the usefulness of the recommendation is measured based on its accuracy.³ Although a high recommendation accuracy can indicate a user's favorite items, there is a fault in that only similar items will be recommended. Several studies have reported that users might not be satisfied with a recommendation even though it exhibits high recommendation accuracy.⁴ For this reason, we consider that a recommendation having only accuracy is satisfactory. The serendipity of a recommendation is an important element when considering a user's long-term profits. A recommendation that brings serendipity to users would solve the problem of user weariness and would lead to exploitation of users' tastes. The viewpoint of the diversity of the recommendation as well as its accuracy should be required for future recommender systems.

Learn how to use Application Service Providers to enhance the future of your business. *Application Service Providers in Business* is a comprehensive analysis of the present ASP model and its place in business today. Business success in today's information-intensive marketplace depends on a company's ability to acquire and fully use the latest advancements in business-critical applications. By having these applications delivered as services over the Internet, businesses can lessen the demands on company IT staff and increase the ability to get complex software into use immediately. Within this context, a new outsourcing business model called ASP (Application Service Provider) has emerged that is transforming how businesses access and leverage software applications. The book explains the specific contingent ASP models, including business enterprise functional focused and vertical market ASPs and ASP aggregators. It demonstrates how different ASP models have fulfilled diverse market customer expectations and explores future scenarios for current ASP business models. Case studies, tables, and figures illustrate important concepts and make complex information easy to access and understand. Based on a thorough analysis of the ASP market environment, the book provides detailed Best Practices Guidelines that managers of ASPs can use to improve the chances of success of their respective ASPs. It outlines contingency factors such as application offerings, customer selection, operations, and strategic fit. The book also not only assists business managers in deciding on whether to use an ASP but it presents ways to use ASPs to effectively support their business process. The ability to provide the workforce with access to data whenever and wherever is crucial for positively impacting a company's profitability, and ASPs provide the software to make it possible.
