Pinedo, J. Verweij, H.D. Suit, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes that aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics which is revised frequently to keep the coverage up to date and which is easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion first by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc and second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and

predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

*Sudden Cardiac Death and Congestive Heart Failure: Diagnosis and Treatment* J. Morganroth, E. Neil Moore, 2012-12-06  
In March of 1980 we organized the first symposium on how to evaluate new antiarrhythmic agents in which the participants included members of the Cardio Renal Division of the Food and Drug Administration academic investigators from the United States and Abroad and directors and implementors of pharmacological research representing the pharmaceutical industry By bringing together all three elements it was hoped that better communication and understanding would ensue to more rapidly bring new cardiac agents to the American public This goal was important since a rather limited number of antiarrhythmic agents were and are currently available to treat patients with such disorders in the United States These agents are needed not only for the treatment of patients with sustained ventricular tachyarrhythmias which produce life threatening hemodynamic consequences but also and in fact more potentially important as a prophylactic measure in the high risk patient subject to sudden cardiac death This book represents the proceedings of the third of these Symposiums whose purpose was to evaluate the clinical research methodology and models used in the evaluation of new antiarrhythmic agents for not only acute therapeutic intervention but also for the prophylaxis of sudden cardiac death In addition new devices have evolved over the past few years that can detect and treat life threatening cardiac arrhythmias and the evaluation of efficacy and safety of these devices is detailed
