The Alcoholic Family in Recovery Stephanie Brown, Virginia Lewis, 2012-01-19. Family relationships change dramatically when one or more members stops drinking. Far from offering a quick fix to family problems, in fact, the first years of sobriety are often marked by continuing tension that fuels marital stress, acting out, kids, and difficulties at work. This book explores the process of recovery from addiction as it affects the entire family, presenting an innovative model for understanding and treating families navigating this difficult period. The authors draw upon extensive clinical and research experience to demonstrate how families can be helped to regroup after abstinence, weather periods of emotional upheaval, and find their way to establishing a more stable yet flexible family system.

Alcohol and Interpersonal Violence Susan Ehrlich Martin, 1993. *Impact of Substance Abuse on Children and Families* Christine Fewell Huff, 2012-12-06. Help children overcome the increasing dangers they face because of their parents' addictions. *Impact of Substance Abuse on Children and Families* addresses the growing concern over children at risk of developing physical and mental health problems because of their parents' addictions to alcohol and other drugs (AOD), including a chapter on the troubling increase of methamphetamine abuse by parents. The book's contributors examine current research findings from the United States, Australia, Ireland, and Israel to provide much needed insight into the effects of addiction on family dynamics, parental attachment styles, and family characteristics. The book also looks at the impact of addiction on school-aged children and on mothers in residential treatment with their children, survey assessment instruments, and treatment outcomes, and the value of Student Assistance Services for older children. Almost 25 percent of children in the United States live in a household where a parent or other adult is a heavy or binge drinker. More than 10 percent live in a family where illicit drugs are used. Children of alcoholics are nearly 10 times more likely to develop an alcohol use disorder than other children and often develop behavior problems such as depression, anxiety, attention deficit hyperactivity disorder, conduct disorder, and oppositional defiant disorder. Children of illicit drug abusers are more likely than other children to demonstrate immature, impulsive, or irresponsible behavior, to have lower IQ scores, and poorer school attendance. *Impact of Substance Abuse on Children and Families* focuses on these critical and often ignored aspects of addiction, providing the latest evidence-based qualitative and quantitative research findings as well as a summary of available literature. *Impact of Substance Abuse on Children and*
