Second Edition

The diagram illustrates a queueing system. On the left, four horizontal lines represent input paths, each ending in a semi-circular buffer. These paths converge into a central circular node. From this node, a single horizontal line extends to the right, passing through a rectangular section divided into three vertical segments, which represents a service area. After the service area, the line splits into four paths, each ending in a semi-circular buffer on the right. The entire diagram is rendered in a light yellow-green color against a dark blue background.
