Recent Developments In Graves Ophthalmopathy:

Recent Developments in Graves' Ophthalmopathy Mark F. Prummel, 2012-12-06 Recent Developments in Graves Ophthalmopathy offers an overview of the pathogenesis assessment and management of patients with thyroid associated eye disease Each chapter is written by an expert and truly represents the current state of the art on the particular topic This book can therefore almost be considered a textbook on this enigmatic disorder Recent Developments in Graves Ophthalmopathy is designed for all those interested in this disease including basic scientists clinical endocrinologists ophthalmologists radiotherapists and orbital surgeons The book gives a comprehensive overview of all aspects of Graves ophthalmopathy Subjects covered include the pathology of Graves eye disease and the controversial views on its autoimmune pathogenesis assessment of the eye changes using reliable measurements medical management of Graves eye disease with an overview of the many treatment options available to the clinician including orbital radiotherapy and other immunosuppressive treatments management of the thyroid disease and finally the techniques for performing various surgical procedures which are explained and illustrated

Thyroid Eye Disease Rebecca S. Bahn, 2012-12-06 Patients afflicted with thyroid eye disease or Graves ophthalmopathy GO may experience not only pain and visual loss but also disfigurement Full understanding of pathogenesis has been elusive and treatment modalities are imperfect As with other conditions more effective intervention will follow only after a better understanding of pathogenesis is reached The goal of this volume is to give an overview by leaders in the field of the present state of the art both in pathogenesis and clinical aspects of GO Much attention has been directed towards determining which cells within the orbit are targets of the autoimmune process and how these and other cells might participate in the local inflammatory process It is now generally agreed that orbital fibroblasts preadipocyte fibroblasts and adipocytes are the targeted and activated cells in GO and that full length TSH receptor TSHr is expressed in these cells Further there is growing consensus that this receptor is up regulated in the orbit in GO residing primarily in newly differentiated adipocytes However it is also evident given a sufficiently sensitive assay that TSHr is detectable in fibroblasts and adipocytes from the normal orbit and other anatomic sites as well It will be important to determine whether the observed increase in orbital TSHr expression itself initiates the orbital autoimmune process Also to be decided is whether orbital lymphocytes from GO patients specifically recognize this receptor and what factor or factors unique to Graves disease might stimulate TSHr expression in orbital cells

Recent Advances in Understanding The Genetics of Immunological Disorders Che Kang Lim, Jinqiao Sun, Hassan Abolhassani, 2024-12-13 Immunological disorders are diseases or conditions due to the dysfunction of the immune system They include primary immunodeficiency syndromes autoimmune diseases asthma allergy and autoinflammatory syndromes These disorders disrupt our body's ability to defend against pathogens In addition it may lead to exaggerated chronic inflammatory responses and tissue damage Immunological disorders are clinically and genetically heterogeneous The phenotypic spectrum of the diseases is broad in some of the

disorders On the other hand the clinical phenotype derived from distinct genotypes can overlap and the same phenotype can be cross shared in different disorders Therefore accurate diagnosis and effective management are challenging Over the last decade advances in genomics and sequencing platforms have accelerated the understanding of how candidate genes contribute to the development of immunological disorders Significant progress has been made in discovering disease causing genes for rare monogenic immunological disorders especially in immunodeficiency syndrome These findings shed insights into disease mechanisms and facilitated the identification of new biomarkers that can help in diagnosis prognosis and development of novel clinical therapeutic approaches

Graves' Orbitopathy Wilmar M. Wiersinga, George Kahaly, 2007 In recent years close interdisciplinary cooperation of numerous international experts both clinicians and basic scientists within the European Group of Graves orbitopathy EUGOGO has yielded much valuable progress and new information which this publication brings together Subjects covered include the pathology of Graves orbitopathy GO and the controversial views on its pathogenesis assessment of changes using reliable measuring techniques medical management of GO including established and alternative treatment options technical explanations and illustrations of various surgical procedures and finally the molecular immunologic and clinical aspects of this complex disorder Stressing the current management of thyroid eye disease this book offers medical practitioners a thorough overview of associated changes in the eyes of patients with GO Therefore this publication is an essential resource for ophthalmologists internists endocrinologists pediatricians immunologists specialists in nuclear medicine neuroradiologists and radiotherapists specialists in laboratory medicine and pathology otorhinolaryngologists orbital and neurosurgeons as well as oral and maxillofacial surgeons
