mathematical programming operations research stochastic optimization and graphs and combinatorics     Profiles in Operations Research Arjang A. Assad, Saul I. Gass, 2011-06-28 Profiles in Operations Research Pioneers and Innovators recounts the development of the field of Operations Research OR the science of decision making The book traces the development of OR from its military origins to a mature discipline that is recognized worldwide for its contributions to managerial planning and complex global operations Over the past six decades OR analyses have impacted our daily lives when making an airline or hotel reservation waiting in line at a bank getting the correctly blended fuel at the gas station and ensuring that the book you are holding arrived at its destination on time OR originated in the late 1930s when British scientists from various disciplines joined Royal Air Force officers to determine the most effective way to employ new radar technology for intercepting enemy aircraft During World War II similar applied research groups were formed to study test and evaluate military operations on both sides of the Atlantic Their work resulted in great improvements OR helped the Allies win the war The scientific field that emerged from these studies was called operational research in the U K and operations research in the U S Today OR provides a broad and powerful science to aid decision making Profiles describes the lives and contributions of 43 OR pioneers and innovators and relates how these individuals with varying backgrounds and diverse interests were drawn to the nascent field of OR The profiles also describe how OR techniques and applications expanded considerably beyond the military context to find new domains in business and industry In addition to their scientific contributions these profiles capture the life stories of the individuals interwoven with personal tales vivid vignettes family backgrounds and views of the mission and future of OR Collectively the profiles recount the fascinating story of the growth and development of a field enriched by the convergence of different disciplines The Editors Arjang A Assad is Dean of the School of Management University at Buffalo State University of New York Saul I Gass is Professor Emeritus Department of Decision Operations Information Technologies Smith School of Business University of Maryland College Park From the Reviews Profiles In Operations Research Pioneers and Innovators Book Review by Nigel Cummings U K OR Society s e journal Inside OR Sept 2011 I can thoroughly recommend this book I found it both enlightening and undeniably gripping so much so in fact you may find it difficult to put it down once you have commenced reading it Arjang A Assad and Saul I Gass have created a masterwork which will serve to immortalise the pioneers of O R for many years to come For a list of all known typos plus further discussion on the book please visit <http://profilesinoperationsresearch.com>     *Integer Programming and Combinatorial Optimization* Friedrich Eisenbrand, Bruce Shepherd, 2010-06-09 The idea of a refereed conference for the mathematical programming community was proposed by Ravi Kannan and William Pulleyblank to the Mathematical Programming Society MPS in the late 1980s Thus IPCO was born and MPS has sponsored the conference as one of its main events since IPCO I at the University of Waterloo in 1990 The conference has become the main forum for recent results in Integer Programming and Combinatorial Optimization in the non Symposium years This volume compiles the papers

presented at IPCO XIV held June 9-11 2010 at EPFL in Lausanne The scope of papers considered for IPCO XIV is likely broader than at IPCO I This is sometimes due to the wealth of new questions and directions brought from related areas It can also be due to the successful application of math programming techniques to models not traditionally considered In any case the interest in IPCO is greater than ever and this is reflected in both the number 135 and quality of the submissions The Programme Committee with 13 members was also IPCO's largest We thank the members of the committee as well as their sub-reviewers for their exceptional and time consuming work and especially during the online committee meeting held over January The process resulted in the selection of 34 excellent research papers which were presented in non parallel sessions over three days in Lausanne Unavoidably this has meant that many excellent submissions were not able to be included

**Combinatorial Optimization** William J. Cook, László Lovász, Jens Vygen, 2008-11-07 The editors and authors dedicate this book to Bernhard Korte on the occasion of his seventieth birthday We the editors are happy about the overwhelming feedback to our initiative to honor him with this book and with a workshop in Bonn on November 3-7 2008 Although this would be a reason to look back we would rather like to look forward and see what are the interesting research directions today This book is written by leading experts in combinatorial optimization All papers were carefully reviewed and eventually twenty three of the invited papers were accepted for this book The breadth of topics is typical for the field combinatorial optimization builds bridges between areas like combinatorics and graph theory submodular functions and matroids networks and connectivity approximation algorithms and mathematical programming computational geometry and polyhedral combinatorics All these topics are related and they are all addressed in this book Combinatorial optimization is also known for its numerous applications To limit the scope however this book is not primarily about applications although some are mentioned at various places Most papers in this volume are surveys that provide an excellent overview of an active research area but this book also contains many new results Highlighting many of the currently most interesting research directions in combinatorial optimization we hope that this book constitutes a good basis for future research in these areas
