Recent Climatic Change A Regional Approach:

Exploring Climate Change through Science and in Society Mike Hulme, 2013-09-11 Mike Hulme has been studying climate change for over thirty years and is today one of the most distinctive and recognisable voices speaking internationally about climate change in the academy in public and in the media. The argument that he has made powerfully over the last few years is that climate change has to be understood as much as an idea situated in different cultural contexts as it is as a physical phenomenon to be studied through universal scientific practices. Climate change at its core embraces both science and society both knowledge and culture. Hulme's numerous academic and popular writings have explored what this perspective means for the different ways climate change is studied, narrated, argued over and acted upon. *Exploring Climate Change through Science and in Society* gathers together for the first time a collection of his most popular, prominent and controversial articles, essays, speeches, interviews and reviews dating back to the late 1980s. The 50 or so short items are grouped together in seven themes: Science, Researching, Culture, Policy, Communicating, Controversy, Futures, and within each theme are arranged chronologically to reveal changing ideas, evidence and perspectives about climate change. Each themed section is preceded with a brief introduction drawing out the main issues examined. Three substantive unpublished new essays have been specially written for the book, including one reflecting on the legacy of Climategate. Taken as a collection, these writings reveal the changes in scientific and public understandings of climate change since the late 1980s as refracted through the mind and expression of one leading academic and public commentator. The collection shows the many different ways in which it is necessary to approach the idea of climate change to interpret and make sense of the divergent and discordant voices proclaiming it in the public sphere.

Geographers Elizabeth Baigent, André Reyes Novaes, 2018-11-15 *Geographers: Biobibliographical Studies* Volume 37 explores the concept of distinction in geography. Through the lives of six geographers working in Brazil, North America, Europe and the Russian Union, it investigates what distinction consists of, how we identify and celebrate it, and how it relates to quotidian practices in the discipline. The volume highlights the continuing importance of biography and the International Geographical Union in recording and assessing distinction. It also considers the relevance of personal networks for the circulation and translation of distinguished geographical knowledge and how this knowledge can underpin applied projects and critical appraisal of geographical scholarship both at a national and sub-national level. Gendered notions of distinction are also addressed, particularly through June Sheppard, who found limited recognition for her work as a result of gendered expectations within the discipline and society at large. By reflecting on how we locate distinguished geographers and tell their histories, *Geographers: Biobibliographical Studies* Volume 37 makes an important contribution to fostering less canonical work in historical geography.

scourges of war and poverty have expanded in reach and impact while paradoxically losing the political support of some of their wealthiest and most powerful members. Their problems mimic those of their members in struggling to adapt to new problems and maintain trust in norms and public bodies. This volume argues, however, that a properly mandated, managed, and modernized global architecture offers unparalleled potential to midwife solutions to intractable issues from violent conflict and climate change to poverty and pandemic disease that transcend borders and the capacities of individual actors. It offers just security as a new framework for sharing innovative solutions and strategies for effective and essential global governance.
