

Levels of Scientific Evidence,

with Dr. Kat

Scientific evidence can be confusing! It's easy to mistake weak evidence for strong evidence. Sometimes people share unreliable things on social media with good intentions, but sometimes they're exploiting the public's lack of understanding of different levels of evidence. We all encounter claims online, but **all evidence is not created equal**. So, how can you tell the quality? This infographic can help you find your way.

META-ANALYSIS

Statistical method that combines the results of multiple scientific studies

Example: Connection between intelligence test scores and education

SYSTEMATIC REVIEW

The gold standard for testing health claims. The reviewer does not include experiments but summarizes them. Researchers randomly assign participants to groups to make fair comparisons and test treatments & ways that evidence fits

Example: Does COVID-19 require masks

INTERPRETIVE REVIEW

Synthesis of all data summarized in a meta-analysis. Offers interpretation and context

Example: Evidence synthesis, scores on biomarkers for COVID-19

COHORT STUDY

Often a large, long-term study that looks at what causes diseases in different groups (cohorts). It is not randomized

Example: Framingham Heart Study

CASE-CONTROL STUDY

A study that compares a group of individuals with a specific condition to a group of people without that condition to find out what may have caused it

Example: A study used to determine a link between smoking and lung cancer

Don't forget: Correlation does NOT equal causation

CROSS-SECTIONAL STUDY

A study on one person (or) one group (series) of people with similar shared characteristics. Because these studies don't make comparisons, they aren't as strong as the evidence in higher levels of the pyramid

Example: Cancer diagnoses reported with no comparisons

WELL-DESIGNED STUDY

A study that measures the health of a particular group of people at a particular point in time

Example: National Health and Nutrition Examination Survey

OPINION PIECE

An educated opinion presented without data. More prone to bias

complex gas gas and gas liquid interfaces The main difficulty in performing an experimental study on RM instability especially in a shock tube circumstance lies in creating an idealized initial interface because the RM instability is extremely sensitive to the initial condition This book introduces new experimental methods to generate shape controllable two dimensional gaseous interfaces thickness controllable gas layers and water droplets embedded with a vapour bubble in the shock tube experiments It covers the latest experiments and theories on the shock driven hydrodynamic instabilities of multi mode multi layer and multi phase interfaces It explores the effects of the mode competition interface coupling and phase transition on interface evolution respectively This book establishes a universal nonlinear theory to predict the RM instability of a shocked multi mode interface based on spectrum analysis This book quantifies the effects of interface coupling and reverberating waves on the hydrodynamic instabilities of a shocked multi layer interface This book provides the experimental studies of the interaction of a shock wave and a multi phase droplet and proposes a modified Rayleigh Plesset equation to predict the vapour bubble collapse inside a droplet
