Scientific Knowledge and Philosophic Thought Harold Himsworth, 2019-12-01 Originally published in 1986 Are there two kinds of problems the scientific and the philosophic each requiring different methods for solution Or are there rather two different ways of approaching a problem each yielding a different answer according to the method used Biomedical researcher Sir Harold Himsworth urges scientists not to shy away from using scientific methods to grapple with problems traditionally accepted as belonging to the province of philosophy The difference between science and philosophy lies not in the problems to which they are directed Himsworth argues but rather in the methods they use for solving them To the scientist a proposition is something to be investigated to the philosopher something to be accepted as a basis for thought Since the development of the scientific method substantial progress has been made toward mastering problems in the natural environment If we are ever to attain a degree of control over problems that derive from human activities Himsworth claims that we only succeed by approaching them in a comparably objective way

Cognitive Semantics and Scientific Knowledge András Kertész, 2004-04-29 The book focuses on the question of how and to what extent cognitive semantic approaches can contribute to the new field of the cognitive science of science The argumentation is based on a series of instructive case studies which are intended to test the prospects and limits of the metascientific application of both holistic and modular cognitive semantics The case studies show that while cognitive semantic research is able to solve problems which have traditionally been the domain of the philosophy of science it also encounters serious limits The prospects and the limits thus revealed suggest new research topics which in future can be tackled by cognitive semantic approaches to the cognitive science of science

Philosophers of Knowledge and Thought Hector Davidson, This book consists of the following titles Ludwig Wittgenstein Ludwig Wittgenstein one of the most influential philosophers of the 20th century profoundly shaped modern thought particularly in the realms of language logic and the philosophy of mind His philosophy spans two distinct periods marked by an evolution in his views on the relationship between language meaning and reality Wittgenstein's work challenges the way we think about and use language positing that philosophical problems often arise from misunderstandings of language and its limitations Martha Nussbaum Martha Nussbaum is one of the most influential philosophers of our time particularly known for her contributions to feminist theory political philosophy and ethics A professor at the University of Chicago her work spans a wide array of topics including justice human capabilities human rights and the role of emotions in moral decision making Nussbaum's ideas have significantly impacted both academic philosophy and practical policy with her innovative theories offering valuable insights into the intersection of ethics politics and human development Bertrand Russell Bertrand Russell born on May 18 1872 in Trellech Monmouthshire Wales was a British philosopher logician mathematician and social critic Coming from a prominent aristocratic family with his grandfather Lord John Russell having served as a British Prime Minister Russell had an influential upbringing He attended Cambridge

Faith and Science in Russian Religious Thought Teresa Obolevitch, 2019-05-09 Faith and Science in Russian Religious Thought provides a comprehensive analysis of the relationship between science and faith in Russian religious thought Teresa Obolevitch offers a synthetic approach on the development of the problem throughout the whole history of Russian thought starting from the medieval period and arriving in contemporary times She considers the relationship between science and religion in the eighteenth century the so called academic philosophy of the 19th and 20th century the thought of Peter Chaadaev the Slavophiles and in the most influential literature figures such as Fedor Dostoevsky and Lev Tolstoy The volume also analyses two channels of the formation of philosophy in the context of the relationship between theology and science in Russia The first is connected with the attempt to rationalize the truths of faith and is exemplified by Vladimir Soloviev and Nikolai Lossky the second with the apophatic tradition is presented by Pavel Florensky and Semen Frank The book then describes the relation to scientific knowledge in the thought of Lev Shestov Nikolai Berdyaev Sergius Bulgakov and Alexei Losev as well as the original project of Russian Cosmism on the examples of Nikolai Fedorov Konstantin Tsiolkovsky and Vladimir Vernadsky Obolevitch presents the current state of the discussion on this topic by paying attention to the Neoplatonic synthesis of Georges Florovsky and his followers and offers the brief comparative analysis of the relationship between science and religion from the Western and Russian perspectives

The Problem of Relativism in the Sociology of (Scientific) Knowledge Richard Schantz, Markus Seidel, 2013-05-02 This volume comprises original articles by leading authors from philosophy as well as sociology in the debate around relativism in the sociology of scientific knowledge Its aim has been to bring together several threads from the relevant disciplines and to cover the discussion from historical and systematic points of view Among the contributors are Maria Baghramian Barry Barnes Martin Endre Hubert Knoblauch Richard Schantz and Harvey Siegel

Bacon and the Limits of Scientific Knowledge Dennis Desroches, 2006-09-15 While Francis Bacon continues to be considered the father of modern experimental science his writings are no longer given close attention by most historians and philosophers of science let alone by scientists themselves In this new book Dennis Desroches speaks up loudly for Bacon showing how we have yet to surpass the fundamental theoretical insights that he offered towards producing scientific knowledge The book first examines the critics who have led many generations of scholars in fields as diverse as literary criticism science studies feminism philosophy and history to think of Bacon as an outmoded landmark in the history of ideas rather than a crucial thinker for our own day Bacon s own work is seen to contain the best responses to these various forms of attack Desroches then focuses on Bacon s *Novum Organum* The Advancement of Learning and *De Augmentis* in order to discern the theoretical rather than simply the empirical or utilitarian nature of his programme for the renovation of the natural sciences The final part of the book draws startling links between Bacon and one of the twentieth century s most important historians philosophers of science Thomas Kuhn discerning in Kuhn s work a reprise of many of Bacon s fundamental ideas despite Kuhn s clear attempt to reject Bacon as a significant contributor to the way we think about scientific practice today Desroches concludes then that Bacon was not simply the father of modern science he is still in the process of fathering it

Metaphysics and the Disunity of Scientific Knowledge Steve Clarke, 2018-10-26 First published in 1998 this volume s primary concern is to demonstrate how a metaphysics can be developed which enables us to make do in an uncertain world and to develop a pragmatic alternative to postmodernism Opposing unificationist view of science Clarke suggests needs to be understood in the context of the perceived threat of metaphysical disorder He explores this through issues including epistemology fundamentalism pluralism and idealisation and identifies a potential solution similar to the work of Otto Neurath

Pragmatic Idealism , 2023-05-15 The System of Pragmatic Idealism is of special importance for Nicholas Rescher s philosophical work because here he has presented the systematic approach at once Dedicated to his 70th birthday a group of European and U S american philosophers discuss the main topics of Rescher s philosophical system The contributions which are presented here for the first time and Nicholas Rescher s responses cover the most important topics of philosophy and give a deep and detailed insight into the strenght of Rescher s pragmatic idealism This volume is of interest for philosophers studying Rescher s philosophy and for all those who are interested in systematic philosophy and the vividnes of pragmatism and idealism in present philosophy

Literature s Contributions to Scientific Knowledge Dario Maestripieri, 2019-02-08 The most important intellectual development in the academy in the 21st century has been the forging of new relationships between the sciences and the humanities and the realization that interdisciplinary scholarship holds the promise of the unification of all knowledge This

groundbreaking book shows how this can be fulfilled Through a wide ranging analysis of arguments concerning the complementarity of arts and sciences advanced by Schelling and Goethe and those about the cognitive value of literature articulated by contemporary philosophers the book shows that literary fiction can contribute to the scientific understanding of human nature With a careful and original examination of autobiographical material and literary texts it demonstrates that European novelists such as Leopold von Sacher Masoch Italo Svevo and Elias Canetti conducted ambitious and innovative literary explorations of the human mind and human behavior using Darwinian theory as their scientific framework and in doing so they anticipated the theoretical developments and empirical findings of cognitive social and evolutionary psychology by almost 100 years The work of these novelists was largely misunderstood by literary scholars but this book s re discovery and illustration of what these writers attempted to accomplish and how they did it show one important path leading to the future unification of all knowledge about the human condition *A Philosophical Critique of Thought* Zhengyu

Sun,2020-11-02 This book is mainly concerned with elaborating an account of the unique theoretical essence and activities of philosophy What manner of civilization should modern humans forge On what developmental path should a nation embark What lifestyle should each individual choose These are the most fundamental issues of our time Profoundly implicit in the choices outlined above is a deeper question What are the criteria of choice An examination of these criteria is a reflection on the premises constituting thought or a critique of the premises underlying thought Using a critique of the premises underlying thought as the basic idea and hermeneutic principle in philosophy will open a wider theoretical space for contemporary philosophy so as to avoid the predicament of being pseudo scientific or pseudo artistic It will also present contemporary philosophy with a realistic path of development for the task of reflecting on the criteria of choice This book seeks to formulate concrete philosophical arguments for a critique of the basic beliefs logic modes concepts and philosophical ideas which constitute thought with the aim of demonstrating the vigorous self critique and inexhaustible theoretical space found in philosophical development This book provides a new principle of interpretation for understanding philosophy and in turn uses this principle to develop a critique of the premises underlying thought thereby furthering the contemporary development of philosophy This book encompasses a critique of the premises underlying thought which mainly includes the basic beliefs logic modes concepts and philosophical ideas constituting thought Such a critique should comprise five aspects First the basic beliefs constituting thought propose a critique of the identity of thought and being second the basic logic constituting thought refers to a critique of the formal intensional and practical logic of thought third the basic modes constituting thought denote a critique of the basic modes by which humans comprehend the world including commonsense religion art and science fourth the basic concepts constituting thought entail a critique centering on being the world history truth value and other basic concepts and finally the philosophical ideas constituting thought indicate a critique of philosophy itself A critique aligned on these five aspects will provide a general philosophical overview of the premise

critique of thought *The Technique of Thought* Ian James, 2019-02-26 Interrogating the work of four contemporary French philosophers to rethink philosophy's relationship to science and science's relationship to reality *The Technique of Thought* explores the relationship between philosophy and science as articulated in the work of four contemporary French thinkers Jean Luc Nancy Fran ois Laruelle Catherine Malabou and Bernard Stiegler Situating their writings within both contemporary scientific debates and the philosophy of science Ian James elaborates a philosophical naturalism that is notably distinct from the Anglo American tradition The naturalism James proposes also diverges decisively from the ways in which continental philosophy has previously engaged with the sciences He explores the technical procedures and discursive methods used by each of the four thinkers as distinct techniques of thought that approach scientific understanding and knowledge experimentally Moving beyond debates about the constructed nature of scientific knowledge *The Technique of Thought* argues for a strong variably configured and entirely novel scientific realism By bringing together post phenomenological perspectives concerning individual or collective consciousness and first person qualitative experience with science's focus on objective and third person quantitative knowledge James tracks the emergence of a new image of the sciences and of scientific practice Stripped of aspirations toward total mastery of the universe or a grand theory of everything this renewed scientific worldview along with the simultaneous reconfiguration of philosophy's relationship to science opens up new ways of interrogating immanent reality *Evolution by the Numbers* James Wynn, 2012-01-05 In *Evolution by the Numbers* The Origins of Mathematical Argument in Biology James Wynn examines the confluence of science mathematics and rhetoric in the development of theories of evolution and heredity in the nineteenth century *Evolution by the Numbers* shows how mathematical warrants become accepted sources for argument in the biological sciences and explores the importance of rhetorical strategies in persuading biologists to accept mathematical arguments *What is Scientific Knowledge?* Kevin McCain, Kostas Kampourakis, 2019-06-11 *What Is Scientific Knowledge* is a much needed collection of introductory level chapters on the epistemology of science Renowned historians philosophers science educators and cognitive scientists have authored 19 original contributions specifically for this volume The chapters accessible for students in both philosophy and the sciences serve as helpful introductions to the primary debates surrounding scientific knowledge First year undergraduates can readily understand the variety of discussions in the volume and yet advanced students and scholars will encounter chapters rich enough to engage their many interests The variety and coverage in this volume make it the perfect choice for the primary text in courses on scientific knowledge It can also be used as a supplemental book in classes in epistemology philosophy of science and other related areas Key features an accessible and comprehensive introduction to the epistemology of science for a wide variety of students both undergraduate and graduate level and researchers written by an international team of senior researchers and the most promising junior scholars addresses several questions that students and lay people interested in science may already have including questions about how scientific knowledge is gained its

nature and the challenges it faces **The Nature of Scientific Knowledge** Kevin McCain, 2016-06-25 This book offers a comprehensive and accessible introduction to the epistemology of science. It not only introduces readers to the general epistemological discussion of the nature of knowledge but also provides key insights into the particular nuances of scientific knowledge. No prior knowledge of philosophy or science is assumed by *The Nature of Scientific Knowledge*. Nevertheless, the reader is taken on a journey through several core concepts of epistemology and philosophy of science that not only explores the characteristics of the scientific knowledge of individuals but also the way that the development of scientific knowledge is a particularly social endeavor. The topics covered in this book are of keen interest to students of epistemology and philosophy of science as well as science educators interested in the nature of scientific knowledge. In fact, as a result of its clear and engaging approach to understanding scientific knowledge, *The Nature of Scientific Knowledge* is a book that anyone interested in scientific knowledge, knowledge in general, and any of a myriad of related concepts would be well advised to study closely.

Laruelle Anthony P. Smith, 2016-09-07 François Laruelle's non philosophy or non standard philosophy represents a bold attempt to rethink how philosophy is practiced in relation to other domains of knowledge. There is a growing interest in Laruelle's work in the English speaking world, but his work is often misunderstood as a wholesale critique of philosophy. In this book, Anthony Paul Smith dispels this misunderstanding and shows how Laruelle's critique of philosophy is guided by the positive aim of understanding philosophy's structure so that it can be creatively recast with other discourses and domains of human knowledge, from politics and ethics to science and religion. This book provides a synthetic introduction to the whole of Laruelle's work. It begins by discussing the major concepts and methods that have framed non philosophy for thirty years. Smith then goes on to show how those concepts and methods enter into traditional philosophical domains and disempower the authoritarian framework that philosophy imposes upon them. Instead of offering a philosophy of politics or a philosophy of science, Laruelle aims at fostering a democracy of thought where philosophy is thought together and equal to the object of its inquiry. This book will be essential reading for students and scholars interested in contemporary French philosophy and anyone who wants to discover more about one of its foremost practitioners.
