A Scientist in the City James Trefil, 1993-12-01 In his previous books *A Scientist At The Seashore* and *Meditations At Sunset* James Trefil used commonplace settings in the natural world as a point of departure for probing the mysteries of nature In *A Scientist In The City* Trefil takes the opposite tack looking at the quintessential man made environment of the city as a way of examining the forces that define our world What does the heating system of a building or the construction of a bridge tell us about the development of a city What does the amplified environmental stress of city life on plants and animals suggest about the wild How have scientific advances in building materials and an understanding of the structure of the atom helped to shape the cities of today From an explanation of the evolution and influence of plate glass to reinforced steel to an analysis of the future of the skyscraper *A Scientist In The City* offers a fascinating study of the promise and the consequences of technology in our everyday urban lives In addition Trefil goes on to explore how the new technologies being developed today will help to determine the changing forms that cities will take in the future *A Scientist In The City* is the kind of book that will open our eyes to the man made world around us and show us some of the scientific reasons for why we live the way we do

Science in the City Bryan A. Brown, 2021-02-17 2021 Outstanding Book Award American Association of Colleges for Teacher Education AACTE *Science in the City* examines how language and culture matter for effective science teaching Author Bryan A Brown argues that given the realities of our multilingual and multicultural society teachers must truly understand how issues of culture intersect with the fundamental principles of learning This book links an exploration of contemporary research on urban science teaching to a more generative instructional approach in which students develop mastery by discussing science in culturally meaningful ways The book starts with a trenchant analysis of the black tax a double standard at work in science language and classrooms that forces

students of color to appropriate and express their science knowledge solely in ways that accord with the dominant culture and knowledge regime Because we are in an interactive multimedia world the author also posits the necessity of applying what is known about best practices in science teaching to best practices in technology The book then turns to instruction illustrating how science education can flourish if it is connected to students backgrounds identities language and culture In this empowered and inclusive form of science classroom the role of narrative is key educators use stories and anecdotes to induct students into the realm of scientific thinking introduce big ideas in easy familiar terms and prioritize explanation over mastery of symbolic systems The result is a classroom that showcases how the use of more familiar culturally relevant modes of communication can pave the way for improved science learning *Growing a Japanese Science City* James W.
