Paranjpe, 2013-04-17 As the world enters the new millennium mankind faces a series of new problems many of them created by man himself These include overpopulation air and water pollution global warming accumulation of greenhouse gases

damage to the ozone layer and loss of biodiversity Perhaps these problems were around even earlier in an incipient stage but they have now assumed global proportions and are uppermost in the minds of all A natural consequence is enhanced interest in sciences connected with these problems Ecology is a field that is immensely useful in understanding many of them In the seventies nature conservation became a concern of wide sections of society well beyond the small group of expert ecologists Species extinction and depletion of biological resources were seen as major threats to human welfare It was therefore natural for scientists from different disciplines to seek reasons behind these developments We were no exceptions and when opportunity to interact with ecologists as statistical consultants came we found ourselves reading more and more of ecology and evolutionary biology Several years ago we proposed starting of an elective one semester course on statistical ecology for graduate students of statistics of Pune University

Correspondences Tim Ingold, 2020-09-22 We inhabit a world of more than humans For life to flourish we must listen to the calls this world makes on us and respond with care sensitivity and judgement That is what it means to correspond to join our lives with those of the beings matters and elements with whom and with which we dwell upon the earth In this book anthropologist Tim Ingold corresponds with landscapes and forests oceans and skies monuments and artworks To each he brings the same spontaneity of thought and observation the same intimacy and lightness of touch but also the same affection longing and care that in the days when we used to write letters by hand we would bring to our correspondences with one another The result is a profound yet accessible inquiry into ways of attending to the world around us into the relation between art and life and into the craft of writing itself At a time of environmental crisis when words so often seem to fail us Ingold points to how the practice of correspondence can help restore our kinship with a stricken earth

Lehtovuori, 2016-12-05 When designing planning and building urban spaces many contradictory and conflicting actors practices and agendas coexist This book propounds that at present this process is conducted in an artificial reality Concept City characterized by a simplified and outdated conception of space It provides a constructive critique of the concepts underlying the practices of planning and architecture and in order to facilitate more dynamic inclusive and subtle practices it formulates a new theory about space in general and public urban space in particular The central notions in this theory are temporality experiment and conflict which are grounded on empirical observations in Helsinki Manchester and Berlin While the book contextualizes Lefebvre's ideas on urban planning and architecture it is in no way limited to Lefebvrian discourse but allows insights to new theoretical work including that of Finnish and Swedish authors In doing so it suggests and develops exciting new approaches and tools leading to experiential urbanism
