Screening For Hearing Loss And Otitis Media In Children:

Screening for Hearing Loss and Otitis Media in Children Jackson Roush, 2001 A growing number of states now require hearing and middle ear screening of all newborns and young children This book provides a concise yet comprehensive guide to these types of screenings It is a practical guide for audiologists speech language pathologists nurses and support personnel seeking a practical summary of procedures and standards *Screening Programmes for the Detection of Otitis Media with Effusion and Conductive Hearing Loss in Pre-school and New Entrant School Children* Lynley Cook, New Zealand Health Technology Assessment, NZHTA, The Clearing House for Health Outcomes and Health Technology Assessment, Department of Public Health and General Practice, Christchurch School of Medicine, 1998 Otitis media with effusion OME is common in preschool and new entrant school children particularly in Maori and Pacific Island children OME is frequently associated with conductive hearing loss New Zealand has various health promotion strategies in place for OME including a national screening programme of 3 and 5 year old children There has been concern both internationally and within New Zealand over the effectiveness of these screening programmes Using a systematic methodology this review examined the evidence for screening programmes for OME and conductive hearing loss using Wilson and Jungner's screening criteria Suitable screening tests are available for OME tympanometry and conductive hearing loss audiometry However hearing testing of children under 4 years of age is more difficult Screening programmes for OME and conductive hearing loss may vary greatly in the way they are constructed and consequently vary in their sensitivity specificity and predictive value This makes it difficult to compare different screening programmes Only a few studies have examined screening programmes for OME and conductive hearing loss and these were generally deficient in their design They did not demonstrate screening programmes to be an effective strategy for OME and conductive hearing loss Unfortunately it is therefore not possible to conclude from the literature reviewed in this report whether or not screening programmes for OME and conductive hearing loss in preschool and school entrant children are an effective health strategy It must be noted that it cannot be concluded that current screening programmes for OME and conductive hearing loss in New Zealand are ineffective *Otitis Media in Infants and Children* Charles D. Bluestone, Jerome O.
