Sectoral Growth And Change:

Sectoral Growth in Chile, 1962-82 Juan Eduardo Coeymans, Yair Mundlak, 1993 The model Productivity Labor Capital Product prices Simulations of changes in relative prices Simulations of growth Structural Change and Industrial Development in the BRICS Wim Naudé, Adam Szirmai, Nobuya Haraguchi, 2015-06-18 This book provides a unique and timely analysis of the role of structural change in the economic development of Brazil Russia India China and South Africa BRICS with a consideration for the role of industry and in particular manufacturing The emergence of BRICS reflects an ongoing change in the international economic order BRICS now account for very substantial part of global GDP global manufactured value added and global manufactured exports The book examines their economic experiences and structural change in BRICS over the past three decades identifying both differences and commonalities and deriving lessons for other industrializing countries Section I contains comparative studies focusing on the commonalities and differences of the experiences of BRICS Section II includes six country studies providing a more detailed analysis of the long run experiences of each of the countries Section III consists of a set of seven thematic studies focusing on specific topics such as global value chains the role of transnational corporations in the food chain the role of foreign versus domestic investment the role of domestic versus foreign demand in economic growth the diffusion of environmental energy technology and the similarities and the differences in industrial policies pursued in the five countries The book contains a summary chapter that provides an integrated perspective of the various contributions from the point of view of poverty reduction and development It asks whether the patterns of structural change and industrial development that BRICS experienced had an impact on poverty outcomes and if so what where the channels and the consequences Patterns of change in Malawi's economy under sector-focused investment strategies: Results of scenarios run through 2030 using an economy-wide model for Malawi Benson, Todd, Hartley, Faaiga, 2020-01-23 Malawi's economic future is dependent upon a transformation of the economy that will involve increased economic productivity overall and considerable movement of labor and capital out of agriculture and into manufacturing and services A dynamic Computable General Equilibrium model of the economy of Malawi was used to better understand the development gains that would be realized by 2030 through significantly increasing separately the productivity of each of the three sectors of the Malawian economy agriculture industry and services The scenarios run in the model involved increasing by 20 percent from current levels the annual growth rate in total factor productivity for each of the three sectors The results show important trade offs in the choice of which sector should receive emphasis in any economic development strategy A services led strategy would result in higher economic growth overall and broadly rising incomes contributing the most to a structural transformation of the Malawi economy However the principal beneficiaries of increased investment to improve productivity in the services sector will be better off households In contrast an agriculture focused strategy would better meet the needs of the poor and their access to food but would result in continued lagging growth for

Malawi's economy and many poorer households continuing to be unable to obtain sufficient income to exit their poverty and realize much better lives for themselves and their children. The industrial sector currently is much smaller than either the agriculture or services sectors particularly in terms of employment so significant increases in productivity growth in industry results in smaller benefits overall than comparable increases in agriculture or services.

Structural Change and Exchange Rate Dynamics Paul J.J. Welfens, Anna Wziatek-Kubiak, 2005-12-06. Structural change, economic growth and adequate exchange rate adjustment are key challenges in the context of EU eastern enlargement as are consistent macroeconomic policies. The authors focus on sectoral adjustment across industries in catching up countries and explain changes in the composition of output. This includes new aspects of the Chenery model. They describe and analyze the spatial pattern of specialization and adjustment in many countries. Theoretical and empirical analysis of foreign direct investment, innovation and structural change shed new light on economic dynamics in Old Europe and New Europe. As regards exchange rate dynamics, both traditional aspects such as the Balassa-Samuelson effect and new approaches to understanding exchange rate developments are presented. Links between exchange rate changes and innovation are particularly emphasized.

Understanding Growth and Poverty Raj Nallari, Breda Griffith, 2011. Provides an understanding of economic policies for poverty reduction in developing countries. The policy areas include the various roles of government in ensuring the effective operation of a market economy, conducting fiscal policy and influencing the money supply, exchange rates and the financial sector.

Growth, Inequality, and Poverty in Rural China Shenggen Fan, Linxiu Zhang, Xiaobo Zhang, 2002-01-01. Growth, inequality and poverty. Public capital investment. Conceptual framework and model. Data estimation and results.

Financial Liberalization, Structural Change, and Real Exchange Rate Appreciations Carlos Urrutia, Felipe Meza, 2010-03-01. We account for the appreciation of the real exchange rate in Mexico between 1988 and 2002 using a two sector dynamic general equilibrium model of a small open economy with two driving forces: i) differential productivity growth across sectors and ii) a decline in the cost of borrowing in foreign markets. These two mechanisms account for 60 percent of the decline in the relative price of tradable goods and explain a large fraction of the reallocation of labor across sectors. We do not find a significant role for migration, remittances, foreign reserves accumulation, government spending, terms of trade or import tariffs.

Topical Issues in International Development and Economics Désiré Avom, Gilles Dufrénot, 2023-11-16. This book offers various insights on current hot topics in development economics. The authors address the questions of gender effects, leapfrogging, the factors determining the production frontiers of countries and the respective roles of financial, monetary and fiscal policies in fostering the development of countries. They also question one of the strategies utilized by policy makers in poor countries: development through trade and financial globalization. They ask whether education has really been a factor in development and look at the role of those who return to the country after studying abroad. This book is the result of a collaboration between researchers from Asia, Africa and Europe. It will be useful to economists and non-economists.

Mansoor Murshed, Pedro Goulart, Leandro Serino, 2011-06-16 Two prominent features of the current global economy are the world wide recession brought about by the recent financial crisis and the emergence of major economic powers from within the developing world such as Brazil China and India The former represents the failure of global regulatory policies and macroeconomic imbalances between surplus and deficit countries the latter is symptomatic of a partial shift in economic power towards developing nations who are often collectively labelled the global South The macroeconomic imbalances are unsustainable in the longer run as they mean greater absorption relative to income in deficit nations they require corrective action and international policy coordination Reducing imbalances also requires large developing countries to raise their domestic consumption and also imports from the rest of the world and international financial institutions to operate as a lender of last resort Furthermore the engines of global growth especially for developing countries may no longer lie solely in the traditional developed country markets in the USA Europe and Japan known collectively as the global North Rather South South trade is growing rapidly and that could be an engine of growth for the global economy including both developed and developing countries The various chapters in this edited volume address issues surrounding global imbalances and the prospects for growth in developing countries propelled by South South interaction This book should be of interest to students and researchers focussing on political economics international economics globalization global imbalance and the world wide recession after 2008 **Industrial Structure, Capital Markets and the Origins of British Economic Decline** William
