importance of availability of credit and the consequent need to reform collateral laws in order to improve access to finance. The ability to give security effectively influences not only the cost of credit but also in some cases whether credit will be available at all. This requires rules that are transparent and readily accessible to non lawyers as well as rules that recognise the needs of small and medium sized enterprises. This book critically engages with the challenges posed by inefficient secured credit laws. It offers a comparative analysis of the reasons and the needs for a secured transactions law reform as well as discussion of the steps taken in many common law civil law and mixed law jurisdictions. The book written under the auspices of the Secured Transactions Law Reform Project informs the debate about reform and advances novel arguments written by world renowned experts that will build upon the existing literature and as such will be of interest to academics legal practitioners and the judiciary involved in secured transactions law around the world. The text considers reform initiatives that have taken place up to the end of April 2016. It has not been possible to incorporate events since then into the discussion. However notable developments include the banks decree passed by the Italian Government on 29th June 2016 and the adoption of the Model Law on Secured Transactions by UNCITRAL on 1st July 2016. In this book we will study about digital payment methods, mobile commerce platforms, cybersecurity in transactions and the growing trends in cashless economies. Towards Reforming the Legal Framework for Secured Transactions in Nigeria Chima Williams IHEME, 2016-08-16 This book offers a valuable guide to one of the most challenging areas of commercial law now frequently referred to as secured transactions with a focus on Nigerian, Canadian and United States perspectives. A debtor's ability to provide collateral influences not only the cost of the money borrowed but also in many cases whether secured lenders are willing to offer credit at all. The book proposes that increasing access to and indeed lowering the cost of credit could tremendously boost economic development while at the same time arguing that this would best be achieved if the legal

framework for secured transactions in Nigeria and of course any other country with similar experiences were designed to allow the use of personal property and fixtures to secure credit Similarly the creation priority perfection and enforcement of security interests in personal property should be simplified and supported by a framework that ensures that neither the interests of secured lenders nor debtors are hampered so as to guarantee the continuous availability of affordable credit as well as debtors willingness to borrow and do business The book further argues that in addition to the obvious preference for real property over personal property by secured lenders due to the unreformed secured transactions legal framework in Nigeria its compartmentalized nature has also resulted in unpredictability in commerce and the concomitant effects of poor access to credit Through the comparative research conducted in this book utilizing the UCC Article 9 and Ontario PPSA as benchmarks the author provides reformers with a repository of tested secured transactions law solutions which law reformers in the Commonwealth countries in Africa and beyond as well as the business community will find valuable in dealing with issues that stem from secured transactions
