Although the issues raised by the rise of security have been the subject of considerable academic interest to date much of the debate surrounding the impact of security on human rights has taken place within particular disciplinary confines. In contrast this collection of essays from leading academics and practitioners in the fields of criminal justice public law international law international relations and legal philosophy offers a genuinely multidisciplinary perspective on the relationship between security and human rights. In addition to exploring how the demands of security might be reconciled with the desire to protect established rights *Security and Human Rights* offers a fresh perspective on the broader legal and political challenges that lie ahead as states attempt to control crime prevent terrorism and protect their citizens.

Investor Protection Hanneke Wegman, 2015-11-24 The expansion of the fund industry has been one of the most notable trends in the financial markets of recent years. Not only has the demand for funds among EU investors grown but both the number and types of investment funds also continue to increase. Since investment funds available in the EU can be established both inside and outside the EU they may be subject to different investor protection regulations depending on where the fund is located. Accordingly different levels of investor protection may exist between investors investing in EU funds and investors investing in non EU funds including US funds. This book investigates whether there is a level playing field between EU investors investing in EU funds and EU investors investing in US funds and if not if there is a legal basis in current EU law for the EU regulator to adopt additional investor protection rules applying to investment funds. The analysis considers the basic characteristics of investment funds how they function in practice and how they are regulated relating to investor protection issues. Factors examined in depth include the following features of funds most relevant to the protection of retail investors: operational structure investment strategies fee structure and legal structure of funds internal control systems transparency and disclosure rules conduct of business rules and depositary monitoring rules. The author examines relevant EU directives and rules and the particular remit of each as well as US law applying to investment funds that are active in the EU. Case law and relevant literature in the field is also drawn on. As an assessment of the current degree of protection applying to funds that are available to EU retail investors as well as an up to date overview of regulatory requirements and procedures concerning the protection of EU investors in investment funds this book is unsurpassed. Especially valuable is the closing discussion about whether the EU regulatory system provides for a level playing field of protection for EU retail investors and if not which additional rules can be adopted by the EU regulator in this area. Lawyers

and other professionals in all areas of law and policy concerned with investment and finance will find this book of great value

Responses to Cyber Terrorism . Centre of Excellence - Defence Against Terrorism, Ankara, Turkey,2008-02-28 The one issue touched on repeatedly by the contributors of this publication is the difficulty of arriving at a definition of cyber terrorism A NATO Office of Security document cautiously defines it as a cyber attack using or exploiting computer or communication networks to cause sufficient destruction or disruption to generate fear or to intimidate a society into an ideological goal But the cyber world is surely remote from what is recognized as terrorism the bloody attacks and ethnic conflicts or more precisely the politically motivated intention to cause death or serious bodily harm to civilians or non combatants with the purpose of intimidating a population or compelling a government UN report Freedom from Fear 2005 It is hard to think of an instance when computer code has physically harmed anyone Yet a number of contributors show that exactly such events potentially on a huge scale can be expected For example attacks on critical infrastructure in particular on SCADA Supervisory Control and Data Acquisition systems which control physical processes in places like chemical factories dams and power stations A part of the publication examines cyber terrorism in the proper sense of the term and how to respond in terms of technology awareness and legal political measures However there is also the related question of responding to the terrorist presence on the Internet so called terrorist contents Here the Internet is not a weapon but an important tool for terrorists communications coordination training recruiting and information gathering on the targets of planned attacks
