## **Security And Persistence Workshops In Computing:**

**Security and Persistence** John Rosenberg, J. Leslie Keedy, 2012-12-06 During a short visit to Bremen in December 1989 John Rosenberg had several discussions with me about computer architecture Although we had previously worked together for more than a decade in Australia we had not seen each other for over a year following my move to Bremen in 1988 Meanwhile John was spending a year on study leave at the University of St Andrews in Scotland with Professor Ron Morrison and his persistent programming research group From our conversations it was quite clear that John was having a most fruitful time in St Andrews and was gaining valuable new insights into the world of persistent programming He was very keen to explore the significance of these insights for the MONADS Project which we had been jointly directing since the early 1980s MONADS was not about persistent programming In fact it had quite different origins in the areas of software engineering and information protection In an earlier stage of the project our ideas on these themes had led us into the world of computer architecture and even hardware design in our attempts to provide an efficient base machine for our software ideas The most important practical result of this phase of the project had been the development of the MONADS PC a mini computer which would be better compared with say a V tv **Fully Integrated Data Environments** Malcolm P.

Atkinson, Ray Welland, 2012-12-06 Research into Fully Integrated Data Environments FIDE has the goal of substantially improving the quality of application systems while reducing the cost of building and maintaining them Application systems invariably involve the long term storage of data over months or years Much unnecessary complexity obstructs the construction of these systems when conventional databases file systems operating systems communication systems and programming languages are used This complexity limits the sophistication of the systems that can be built generates operational and usability problems and deleteriously impacts both reliability and performance This book reports on the work of researchers in the Esprit FIDE projects to design and develop a new integrated environment to support the construction and operation of such persistent application systems It reports on the principles they employed to design it the prototypes they built to test it and their experience using it **Persistent Object Systems** Antonio Albano, Ron Morrison, 2012-12-06

Cryptographic Security Architecture Peter Gutmann, 2007-05-08 A cryptographic security architecture is the collection of hardware and software that protects and controls the use of encryption keys and similar cryptovariables It is the foundation for enforcing computer security policies and controls and preempting system misuse This book provides a comprehensive design for a portable flexible high security cryptographic architecture with particular emphasis on incorporating rigorous security models and practices Cryptographic Security Architecture unveils an alternative means of building a trustworthy system based on concepts from established software engineering principles and cognitive psychology Its novel security kernel design implements a reference monitor that controls access to security relevant objects and attributes based on a configurable security policy Topics and features Builds a concise architectural design that can be easily extended in the

future Develops an application specific security kernel that enforces a fully customizable rule based security policy Presents a new verification technique that allows verification from the high level specification down to the running code Describes effective security assurance in random number generation and the pitfalls associated therewith Examines the generation and protection of cryptovariables as well as application of the architectural design to cryptographic hardware The work provides an in depth presentation of a flexible platform independent cryptographic security architecture suited to software hardware and hybrid implementations Security design practitioners professionals researchers and advanced students will find the work an essential resource

**Computer Security** John S. Potts, 2002 We live in a wired society with computers containing and passing around vital information on both personal and public matters Keeping this data safe is of paramount concern to all Yet not a day seems able to pass without some new threat to our computers Unfortunately the march of technology has given us the benefits of computers and electronic tools while also opening us to unforeseen dangers Identity theft electronic spying and the like are now standard worries In the effort to defend both personal privacy and crucial databases computer security has become a key industry A vast array of companies devoted to defending computers from hackers and viruses have cropped up Research and academic institutions devote a considerable amount of time and effort to the study of information systems and computer security Anyone with access to a computer needs to be aware of the developing trends and growth of computer security To that end this book presents a comprehensive and carefully selected bibliography of the literature most relevant to understanding computer security Following the bibliography section continued access is provided via author title and subject indexes With such a format this book serves as an important guide and reference tool in the defence of our computerised culture

**Computer Security** Matthew A. Bishop, Matt Bishop, 2003 The importance of computer security has increased dramatically during the past few years Bishop provides a monumental reference for the theory and practice of computer security Comprehensive in scope this book covers applied and practical elements theory and the reasons for the design of applications and security techniques

*Computer Security. ESORICS 2024 International Workshops* Joaquin Garcia-Alfaro, Ken Barker, Guillermo Navarro-Arribas, Cristina Pérez-Solà, Sergi Delgado-Segura, Sokratis Katsikas, Frédéric Cuppens, Costas Lambrinoudakis, Nora Cuppens-Boulahia, Marek Pawlicki, Michał Choraś, 2025-04-01 This two volume set LNCS 15263 and LNCS 15264 constitutes the refereed proceedings of eleven International Workshops which were held in conjunction with the 29th European Symposium on Research in Computer Security ESORICS 2024 held in Bydgoszcz Poland during September 16 20 2024 The papers included in these proceedings stem from the following workshops 19th International Workshop on Data Privacy Management DPM 2024 which accepted 7 full papers and 6 short papers out of 24 submissions 8th International Workshop on Cryptocurrencies and Blockchain Technology CBT 2024 which accepted 9 full papers out of 17 submissions 10th Workshop on the Security of Industrial Control Systems and of Cyber Physical Systems CyberICPS 2024 which accepted 9 full papers out of 17 submissions International Workshop on Security and Artificial

*Women into Computing* Gillian Lovegrove, Barbara Segal, 2013-06-29 This book contains the majority of the papers presented at the 1990 Women into Computing Conference together with selected papers from the 1989 and 1988 Conferences In 1988 the main theme running through the Conference was that of dismay at the low number of women taking computing courses or following computing careers The 1989 Conference was concerned solely with workshops for schoolgirls and the 1990 Conference concentrated on strategies rather than an assessment of the situation As editors we set as our task to make a selection of papers presenting the overall picture in 1990 We found that many of the issues discussed in 1988 are still a cause for concern in 1990 but that strategies to improve the situation are many and varied Section I contains speeches from the invited speakers and needs little introduction Section II contains papers covering so me attitudes and issues of concern ranging from the specific Gill Russell on child care and Laurie Keller on hacker mentality through to broader aspects of gender inequality the papers of Flis Henwood Margaret Bruce and Alison Adam and Lyn Bryant Susan Jones takes a look at the reasons why we should want to see more women in computing whilst Gillian Lovegrove and Wendy Hall present a more general paper on school and higher education

**6th Refinement Workshop** David Till, 2012-12-06 The Sixth Refinement Workshop took place at City University in London from 5th to 7th January 1994 The present volume includes all of the papers which were submitted and accepted for presentation together with two papers by invited speakers The workshops in the series have generally occurred at one year intervals but in this last case a two year period had elapsed These workshops have established themselves as an important event in the calendar for all those who are interested in progress in the underlying theory of refinement and in the take up by industry of the methods supported by that theory One of the proposed themes of the sixth workshop was the reporting of successful adoption in industry of rigorous software development methods The programme committee was perhaps slightly disappointed by the response from industry to the call in this respect However the recent period could be characterised as one of consolidation when those companies which have made the decision that formal development methods are important to their business have been adopting them where appropriate and finding them to be worthwhile On the other hand the difficult economic climate which exists in most parts of the developed world is perhaps not the context within which companies still dubious about the benefits are goil g to opt for making major changes in their working practices

**Z User Workshop, London 1992** J.P. Bowen, J.E. Nicholls, 2013-03-09 The Z notation has been developed at the Programming Research Group at the Oxford University Computing Laboratory and elsewhere for over a decade It is now used by industry as part of the software and hardware

development process in both Europe and the USA It is currently undergoing BSI standardisation in the UK and has been proposed for ISO standardisation internationally In recent years researchers have begun to focus increasingly on the development of techniques and tools to encourage the wider application of Z and other formal methods and notations This volume contains papers from the Seventh Annual Z User Meeting held in London in December 1992 In contrast to previous years the meeting concentrated specifically on industrial applications of Z and a high proportion of the participants came from an industrial background The theme is well represented by the four invited papers Three of these discuss ways in which formal methods are being introduced and the fourth presents an international survey of industrial applications It also provides a reminder of the improvements which are needed to make these methods an accepted part of software development In addition the volume contains several submitted papers on the industrial use of Z two of which discuss the key area of safety critical applications There are also a number of papers related to the recently completed ZIP project The papers cover all the main areas of the project including methods tools and the development of a Z Standard the first publicly available version of which was made available at the meeting Finally the volume contains a select Z bibliography and section on how to access information on Z through comp specification z the international computer based USENET newsgroup Z User Workshop London 1992 provides an important overview of current research into industrial applications of Z and will provide invaluable reading for researchers postgraduate students and also potential industrial users of Z

IV Higher Order Workshop, Banff 1990 Graham Birtwistle, 2012-12-06 It is many years since Landin Burge and others showed us how to apply higher order techniques and thus laid some foundations for modern functional programming The advantage of higher order descriptions that they can be very succinct and clear has been percolating through ever since Current research topics range from the design implementation and use of higher order proof assistants and theorem provers through program specification and verification and programming language design to its applications in hardware description and verification The papers in this book represent the presentations made at a workshop held at Banff Canada September 10 14 1990 and organised by the Computer Science Department of the University of Calgary The workshop gathered together researchers interested in applying higher order techniques to a range of problems The workshop format had a few but fairly long presentations per day This left ample time for healthy discussion and argument many of which continued on into the small hours With so much to choose from the program had to be selective This year's workshop was divided into five parts 1 Expressing and reasoning about concurrency Warren Burton and Ken Jackson John Hughes and Faron Moller 2 Reasoning about synchronous circuits Geraint Jones and Mary Sheeran with a bonus on the fast Fourier transform from Geraint 3 Reasoning about asynchronous circuits Albert Camilleri Jo Ebergen and Martin Rem 4 Categorical concepts for programming languages Robin Cockett Barry Jay and Andy Pitts

*Advances in Persistent Object Systems* Ron Morrison, Mick Jordan, Malcolm Atkinson, 1999-01-22

Proceedings of the biennial International Workshops on Persistent Object Systems      **5th Refinement Workshop** Cliff B.

Jones, Roger C. Shaw, Tim Denvir, 2013-03-14 Refinement is the term used to describe systematic and formal methods of specifying hard and software and transforming the specifications into designs and implementations The value of formal methods in producing reliable hard and software is widely appreciated by academics and workers in industry despite the fact that certain research areas such as the application to industrial scale problems are still in their infancy This volume contains the papers presented at the 5th Refinement Workshop held in London 8 10 January 1992 Its theme was the theory and practice of software specifications which is the transformation of formal software specifications into more correct specifications designs and codes This has been an important area of research for the last 5 years and the workshop addressed specific issues and problems related to it Among the topics discussed in this volume are the role of refinement in software development parallel designs and implementations methods and tools for verification of critical properties refinement and confidentiality concurrent processes as objects the compliance of Ada programs with Z specifications and a tactic driven refinement tool This is the latest refinement workshop proceedings to be published in the Workshops in Computing series the 3rd and 4th workshops having appeared in 1990 and 1991 respectively It will be of interest to academic and industrial researchers postgraduate students and research oriented developers in the computer industry

First International Workshop on Larch Ursula Martin, Jeannette M. Wing, 2013-11-11 The papers in this volume were presented at the First International Workshop on Larch held at MIT Endicott House near Boston on 13 15 July 1992 Larch is a family of formal specification languages and tools and this workshop was a forum for those who have designed the Larch languages built tool support for them particularly the Larch Prover and used them to specify and reason about software and hardware systems The Larch Project started in 1980 led by John Guttag at MIT and James Horning then at Xerox Palo Alto Research Center and now at Digital Equipment Corporation Systems Research Center DEC SRC Major applications have included VLSI circuit synthesis medical device communications compiler development and concurrent systems based on Lamport's TLA as well as several applications to classical theorem proving and algebraic specification Larch supports a two tiered approach to specifying software and hardware modules One tier of a specification is written in the Larch Shared Language LSL An LSL specification describes mathematical abstractions such as sets relations and algebras its semantics is defined in terms of first order theories The second tier is written in a Larch interface language one designed for a specific programming language An interface specification describes the effects of individual modules e.g. state changes resource allocation and exceptions its semantics is defined in terms of first order predicates over two states where state is defined in terms of the programming language's notion of state Thus LSL is programming language independent a Larch interface language is programming language dependent Z User Workshop, Oxford 1990 J.E. Nicholls, 2013-11-11 Neural Computation and Psychology Leslie S. Smith, Peter J.B. Hancock, 2013-06-29 The papers that appear in this volume are refereed versions of presentations made at the third Neural Computation and Psychology Workshop held at Stirling

University Scotland from 31 August to 2 September 1994 The aim of this series of conferences has been to explore the interface between Neural Computing and Psychology this has been a fruitful area for many researchers for a number of reasons The development of Neural Computation has supplied tools to researchers in Cognitive Neuroscience allowing them to look at possible mechanisms for implementing theories which would otherwise remain black box techniques These theories may be high level theories concerned with interaction between a number of brain areas or low level describing the way in which smaller local groups of neurons behave Neural Computation techniques have allowed computer scientists to implement systems which are based on how real brains appear to function providing effective pattern recognition systems We can thus mount a two pronged attack on perception The papers here come from both the Cognitive Psychology viewpoint and from the Computer Science viewpoint it is a mark of the growing maturity of the interface between the two subjects that they can understand each other's papers and the level of discussion at the workshop itself showed how important each camp considers the other to be The papers here are divided into four sections reflecting the primary areas of the material

Algebra of Communicating Processes Alban Ponse, Christiaan Verhoef, Sebastiaan F.M. van Vlijmen, 2012-12-06 ACP the Algebra of Communicating Processes is an algebraic approach to the study of concurrent processes initiated by Jan Bergstra and Jan Willem Klop in the early eighties These proceedings comprise the contributions to ACP94 the first workshop devoted to ACP The workshop was held at Utrecht University 16-17 May 1994 These proceedings are meant to provide an overview of current research in the area of ACP They contain fifteen contributions The first one is a classical paper on ACP by J.A. Bergstra and J.W. Klop The Algebra of Recursively Defined Processes and the Algebra of Regular Processes Report IW 235/83 Mathematical Centre Amsterdam 1983 It serves as an introduction to the remainder of the proceedings and indeed as a general introduction to ACP An extended abstract of this paper is published under the same title in the ICALP 84 proceedings Of the remaining contributions three were submitted by the invited speakers and the others were selected by the programme committee As for the presentations Jos Baeten, Rob van Glabbeek, Jan Friso Groote and Frits Vaandrager were each invited to deliver a lecture A paper relating to Frits Vaandrager's lecture has already been submitted for publication elsewhere and is not therefore included in these proceedings Gabriel Ciobanu, one of our guests, gave an impression of his work in an extra lecture Furthermore ten presentations were given on the basis of selected papers

**Rough Sets, Fuzzy Sets and Knowledge Discovery** Wojciech P. Ziarko, 2012-12-06 The objective of this book is two fold Firstly it is aimed at bringing together key research articles concerned with methodologies for knowledge discovery in databases and their applications Secondly it also contains articles discussing fundamentals of rough sets and their relationship to fuzzy sets machine learning management of uncertainty and systems of logic for formal reasoning about knowledge Applications of rough sets in different areas such as medicine logic design image processing and expert systems are also represented The articles included in the book are based on selected papers presented at the International Workshop on Rough Sets and

Knowledge Discovery held in Banff Canada in 1993 The primary methodological approach emphasized in the book is the mathematical theory of rough sets a relatively new branch of mathematics concerned with the modeling and analysis of classification problems with imprecise uncertain or incomplete information The methods of the theory of rough sets have applications in many sub areas of artificial intelligence including knowledge discovery machine learning formal reasoning in the presence of uncertainty knowledge acquisition and others This spectrum of applications is reflected in this book where articles although centered around knowledge discovery problems touch a number of related issues The book is intended to provide an important reference material for students researchers and developers working in the areas of knowledge discovery machine learning reasoning with uncertainty adaptive expert systems and pattern classification Rules in Database Systems Norman W. Paton, M. Howard Williams, 2012-12-06 This book is the proceedings of a workshop held at Heriot Watt University in Edinburgh in August 1993 The central theme of the workshop was rules in database systems and the papers presented covered a range of different aspects of database rule systems These aspects are reflected in the sessions of the workshop which are the same as the sections in this proceedings Active Databases Architectures Incorporating Temporal Rules Rules and Transactions Analysis and Debugging of Active Rules Integrating Graphs Objects with Deduction Integrating Deductive and Active Rules Integrity Constraints Deductive Databases The incorporation of rules into database systems is an important area of research as it is a major component in the integration of behavioural information with the structural data with which commercial databases have traditionally been associated This integration of the behavioural aspects of an application with the data to which it applies in database systems leads to more straightforward application development and more efficient processing of data Many novel applications seem to need database systems in which structural and behavioural information are fully integrated Rules are only one means of expressing behavioural information but it is clear that different types of rule can be used to capture directly different properties of an application which are cumbersome to support using conventional database architectures In recent years there has been a surge of research activity focusing upon active database systems and this volume opens with a collection of papers devoted specifically to this topic Functional Programming, Glasgow 1993 John T. O'Donnell, Kevin Hammond, 2012-12-06 The Functional Programming Group at the University of Glasgow was started in 1986 by John Hughes and Mary Sheeran Since then it has grown in size and strength becoming one of the largest computing science research groups at Glasgow and earning an international reputation The first Glasgow Functional Programming Workshop was organised in the summer of 1988 Its purpose was threefold to provide a snapshot of all the research going on within the group to share research ideas between Glaswegians and colleagues in the U K and abroad and to introduce research students to the art of writing and presenting papers at a semi formal but still local and friendly conference The success of the first workshop has led to an annual series Rothesay 1988 Fraserburgh 1989 Ullapool 1990 Portree 1991 Ayr 1992 and the workshop reported in these

proceedings Ayr 1993 Most participants wrote a paper that appeared in the draft proceedings distributed at the workshop and each draft paper was presented by one of the authors The papers were all refereed by several other participants at the workshop both internal and external and the programme committee selected papers for these proceedings Most papers have been revised twice based firstly on feedback at the workshop and secondly using the referee reports
