always a special honor to chair the European Dependable Computing Conference EDCC EDCC has become one of the well established conferences in the field of dependability in the European research area Budapest was selected as the host of this conference due to its traditions in organizing international scientific events and its traditional role of serving as a meeting point between East and West EDCC 5 was the fifth in the series of these high quality scientific conferences In addition to the overall significance of such a pan European event this year's conference was a special one due to historic reasons The roots of EDCC date back to the moment when the Iron Curtain fell Originally two groups of scientists from different European

countries in Western and Eastern Europe who were active in research and education related to dependability created a joint forum in order to merge their communities as early as in 1989 This trend has continued up to today This year's conference was the first one where the overwhelming majority of the research groups belong to the family of European nations united in the European Union During the past 16 years we observed that the same roots in all the professional cultural and scientific senses led to a seamless integration of these research communities previously separated especially for a long time EDCC has become one of the main European platforms to exchange new search ideas in the field of dependability

**Privacy-Respecting Intrusion Detection** Ulrich Flegel,2007-08-28 Computer and network security is an issue that has been studied for many years The Ware Report which was published in 1970 pointed out the need for c puter security and highlighted the di culties in evaluating a system to determine if it provided the necessary security for particular applications The Anderson Report published in 1972 was the outcome of an Air Force Planning Study whose intent was to de ne the research and development paths required to make secure computers a reality in the USAF A major contribution of this report was the de nition of the reference monitor concept which led to security kernel architectures In the mid to late 1970s a number of systems were designed and implemented using a security kernel architecture These systems were mostly sponsored by the defense establishment and were not in wide use Fast forwarding to more recent times the advent of the world wide web inexp sive workstations for the o ce and home and high speed connections has made it possible for most people to be connected This access has greatly bene ted society allowing users to do their banking shopping and research on the Int net Most every business government agency and public institution has a public facing web page that can be accessed by anyone anywhere on the Internet fortunately society s increased dependency on networked software systems has also given easy access to the attackers and the number of attacks is steadily increasing
