Sets Logic And Categories:

Sets, Logic and Categories Peter J. Cameron, 1999-01-22 Set theory logic and category theory lie at the foundations of mathematics and have a dramatic effect on the mathematics that we do through the Axiom of Choice Gödel's Theorem and the Skolem Paradox But they are also rich mathematical theories in their own right contributing techniques and results to working mathematicians such as the Compactness Theorem and module categories The book is aimed at those who know some mathematics and want to know more about its building blocks Set theory is first treated naively an axiomatic treatment is given after the basics of first order logic have been introduced The discussion is supported by a wide range of exercises The final chapter touches on philosophical issues The book is supported by a World Wide Web site containing a variety of supplementary material

Sets and Extensions in the Twentieth Century, 2012-01-24 Set theory is an autonomous and sophisticated field of mathematics that is extremely successful at analyzing mathematical propositions and gauging their consistency strength It is as a field of mathematics that both proceeds with its own internal questions and is capable of contextualizing over a broad range which makes set theory an intriguing and highly distinctive subject This handbook covers the rich history of scientific turning points in set theory providing fresh insights and points of view Written by leading researchers in the field both this volume and the Handbook as a whole are definitive reference tools for senior undergraduates graduate students and researchers in mathematics the history of philosophy and any discipline such as computer science cognitive psychology and artificial intelligence for whom the historical background of his or her work is a salient consideration Serves as a singular contribution to the intellectual history of the 20th century Contains the latest scholarly discoveries and interpretative insights

Fuzziness and Approximate Reasoning K. K.

Dompere, Kofi Kissi Dompere, 2009-03-25 This monograph is special in its orientation and contribution to current state of our understanding of decision choice process and knowledge production Its special orientation is to bring to the scientific community the discussions on the epistemic structure of the relationships among uncertainty expectations risk possibility probability and how the rules of fuzzy paradigm and the methods of fuzzy rationality bring new and different understanding to the relationships At the level of theory of knowledge it presents the structure and epistemic analysis of uncertainty expectations and risk in decision choice actions through the characteristics of substitution transformation and input output processes in categorial dynamics of actual potential duality The interactive effects of rationality and expectation are examined around belief prospect time and conditions of belief justification where the relationship between possibility and probability as a sequential link between potential and actual is analyzed to provide some understanding of the role of relative costs and benefits in defining risk in both nature and society The concepts of possibilistic and probabilistic beliefs are

explicated in relation to rationality and the decision choice process where the analytical relationship between uncertainty and expectation formation is presented leading to the introduction of two types of uncertainty composed of fuzzy uncertainty and stochastic uncertainty **Mathematical Logic and Theoretical Computer Science** David Kueker,2020-12-22

Self, Logic, and Figurative Thinking
Harwood Fisher, 2008-12-31 Harwood Fisher argues against neuroscientific and cognitive scientific explanations of mental states for they fail to account for the gaps between actions in the brain cognitive operations linguistic mapping and an individual's account of experience Fisher probes a rich array of thought from the primitive and the dream to the artistic figure of speech and extending to the scientific metaphor He draws on first person methodologies to restore the conscious self to a primary function in the generation of figurative thinking How does the individual originate and organize terms and ideas How can we differentiate between different types of thought and account for their origins Fisher depicts the self as mediator between trope and logical form Conversely he explicates the creation and articulation of the self through interplay between logic and icon Fisher explains how the I can step out of scripted roles The self is neither a discursive agent of postmodern linguistics nor a socially determined entity Rather it is a historically situated dynamically constituted place at the crossroads of conscious agency and unconscious actions and evolving contextual logics and figures
