Recombinant DNA Methodology, 2014-05-19 Recombinant DNA methods are powerful revolutionary techniques that allow the isolation of single genes in large amounts from a pool of thousands or millions of genes and the modification of these isolated genes or their regulatory regions for reintroduction into cells for expression at the RNA or protein levels These attributes lead to the solution of complex biological problems and the production of new and better products in the areas of medicine agriculture and industry *Recombinant DNA Methodology* a volume in the *Selected Methods in Enzymology* series produced in benchtop format contains a selection of key articles from Volumes 68 100 101 153 154 and 155 of *Methods in Enzymology* The essential and widely used procedures provided at an affordable price will be an invaluable aid to the graduate student and the researcher Enzymes in DNA research DNA isolation hybridization and cloning DNA sequence analysis cDNA cloning Gene products Identification of cloned genes and mapping of genes Monitoring cloned gene expression Cloning and transferring of genes into yeast cells Cloning and transferring of genes into plant cells Cloning and transferring of genes into animal cells Site directed mutagenesis Protein engineering Expression vectors Handbook of Preformulation Sarfaraz K. Niazi, 2019-03-22 Preformulation studies are the physical chemical and biological studies needed to characterize a drug substance for enabling the proper design of a drug product whereas the effectiveness of a drug product is determined during the formulation studies phase Though the two disciplines overlap in practice each is a significantly distinct phase of new drug development Entirely focused on preformulation principles this fully revised and updated *Handbook of Preformulation Chemical Biological and Botanical Drugs Second Edition* provides detailed descriptions of preformulation methodologies gives a state of the art description of each technique and lists the currently available tools useful in providing a comprehensive characterization of a new drug entity Features Addresses the preformulation studies of three different types of new active entities chemical biological and botanical which is the latest established class of active ingredient classified by the FDA Illustrates the activities comprised in preformulation studies and establishes a method of tasking for drug development projects Includes extensive flow charts for characterization decision making Gives extensive
