Recording Structures of Mammals Galina Aleksandrovna Klevezal', 1996 *Recording Structures of Mammals* Galina A. Klevezal, 2017-10-19 This text focuses on the principles and methods of using growth layers formed in teeth and bones of mammals to make a judgement on essential traits of the animal's life history. In nearly all mammalian species including man the age of individuals can be determined from the number of growth layers and at least in some of them it is possible to estimate the season of an animal's birth and death age of sexual maturation periodicity of reproduction certain feeding habits and other aspects of the individual's biology. It is also possible from tooth enamel analysis to assess doses of radiation accumulated by animals and human beings during their lifetime. This book is intended for zoologists wild game biologists and zoo archaeologists but some of the sections could also be of interest for anthropologists radioecologists and conservation biologists. CRC Handbook of Marine Mammal Medicine Leslie Dierauf, Frances M.D. Gulland, 2001-06-27 CRC Handbook of Marine Mammal Medicine Second Edition is the only handbook specifically devoted to marine mammal medicine and health. Analysis of vertebrate predator-prey community Vadim Sidorovich, 2011-09-01 This monograph is about predation in vertebrate animal community. The studies were done in the seminatural terrains with transitional mixed forest within the European forest zone in Belarus. The result part was organised as a top down flow. First the community characteristics related to predators were estimated. I presented data on predator species richness, population density and biomass with special attention paid to the changes in predator species diversity occurred during the last two centuries and particularly in connection with the American mink and raccoon dog naturalization. Then the main features of predator food niches were given and the structure of various predator guilds and size structure in predators were analysed. The next part of the monograph was devoted to examining of community important factors acting in semi natural terrains. Such factors affected either the whole community or its marked fragment. The last quite a large part of the monograph consisted of many chapters which present more or less essential results on different predator species and stresses hot questions of their population ecology.

The Evolution of the Human Head Daniel Lieberman, 2011-01-03 Exhaustively researched and years in the making, this innovative book documents how the many components of the head function, how they evolved since we diverged from the apes and how they interact in diverse ways both functionally and developmentally, causing them to be highly integrated. This integration not only permits the head's many units to accommodate each other as they grow and work but also facilitates evolutionary change. Lieberman shows how, when and why the major transformations evident in the

evolution of the human head occurred The special way the head is integrated Lieberman argues made it possible for a few developmental shifts to have had widespread effects on craniofacial growth yet still permit the head to function exquisitely
