Acquired Aphasia in Children Isabel Pavão Martins,A. Castro-Caldas,Hugo R. van Dongen,Anne van Hout,1991-07-31 One of the most fascinating problems in Behavioural Neurology is the question of the cerebral organization for language during childhood Acquired aphasia in children albeit rare is a unique circumstance in which to study the relations between language and the brain during cerebral maturation Its study further contributes to our understanding of the recovery processes and brain plasticity during childhood But while there is a great amount of information and experimental work on brain behaviour relationships in adult subjects the literature about the effects of focal brain lesions in children is both exiguous and scattered throughout scientific journals and books We felt it was time to organize a meeting where scientists in this field could compare their experiences and discuss ideas coming from different areas of research A workshop on Acquired Aphasia in Children was held in Sintra Portugal on September 13 15 1990 and attended by 44 participants from 13 different countries The atmosphere was relaxed and informal and the group was kept small to achieve this effect It was a very lively and pleasant meeting Some consensus was indeed arrived at concerning methodological problems definition of terms and guidelines for future research The main contributions are collected in this book which we hope will serve the scientific community as a reference work on Childhood Aphasia I P M A C C
