Recycling Cities for People Laurence S. Cutler, Sherrie Stephens Cutler, 1976 Recycling Cities for People: the Urban Design Process: Laurence Stephan Cutler, Sherrie Stephens Cutler Laurence Stephan Cutler, 1976 **Urban Design** Jon Lang, 1994 Urban Design the American Experience Jon Lang Urban Design The American Experience places social and environmental concerns within the context of American history It returns the focus of urban design to the creation of a better world It evaluates the efforts of designers who apply knowledge about the environment and people to the creation of livable enjoyable and even inspiring built worlds Urban Design The American Experience emphasizes that urban design must take a user oriented approach to achieve a higher quality of life in human settlements All the keys to this approach are spelled out in chapters that address Urban design as both a product and process of communal decision making Types of knowledge required as a base for urban design action How to apply recent environmental and behavioral research to professional design How human needs are fulfilled through design The true role of functionalism in design Urban design efforts of the twentieth century in the United States are examined within their socio political context Jon Lang reviews the urban design experience from the beginning of the City Beautiful movement paying particular attention to developments since World War II He explores how the twentieth century city has developed as well as discusses the attitudes that have driven major movements in urban design Readers learn a neo Modernist approach that builds on the successes and failures of Rationalism and Empiricism the two major streams of Modernist thought in architecture and urban design They also gain an understanding of how the environment is experienced by people and the implications of this experiencing for architectural and urban design Numerous illustrations throughout demonstrate how various design schemes can be used Urban Design The American Experience provides architects designers city planners and students in these fields with a model for their own future development as professionals It is a valuable guide to design methodology procedural theory and other issues related to creating optimal urban environments **Contemporary Urban Design Thoughts in China** Jin Duan, Jinhua

Liu, 2022-07-08 This book proposes and systematically discusses four trends of thoughts in contemporary Chinese urban design As the first book to systematically introduce contemporary Chinese urban design thoughts this book objectively displays the macroscopic picture of contemporary urban design development of China from the time dimension sorting out seven historical stages and three disputes This book is mainly divided into two parts The first part focuses on the vertical description taking the major events in the seven historical stages as the context combing the macro picture of the development of contemporary urban design in China in the last 100 years and describing the three controversies in this process contention subject and legalization The second part focuses on horizontal observations puts forward and systematically discusses the four trends of thought formed in the development of contemporary urban design in China including Design of Form Synthesis of Design Control of Design and Design of Rule This part discusses their development

background theoretical support and key concepts in detail and finally conducts critical thinking The whole book is based on historical events archives and papers published in Chinese academic journals While sorting out summarizing and objectively discussing it also makes a critique of urban design activities and academic thinking in China which will greatly benefit scholars and readers who are interested in urban design history of contemporary China

Golany,1995-08-01 The city according to urban design scholar Gideon Golany is the largest and most complicated project ever produced by humankind In *Ethics and Urban Design* he challenges design professionals to reexamine their basic assumptions about the urban environment and offers design strategies based on enduring human values In search of answers to the paradoxical problems of the modern city Golany takes the reader through the sweep of human settlements from the dawn of civilization to the present His authoritative examination of the genesis of the city is illuminated by instructive examples of early urban centers Mesopotamia the Indus River Valley the Egyptian cities of the Nile and the capital cities of ancient China all are examined in the light of what made them work as major centers of human activity What Golany finds in the success stories of the past are cohesive sociocultural values that shaped the design of homes neighborhoods and cities These ethical values helped to maintain an equilibrium within the society that permeated its natural social and human made environments In the present era conversely he finds a major disconnection between human values and the ethics of technology which has resulted in confusion imbalance and dehumanization To help designers gain a perspective on possible solutions Golany explains leading comprehensive design strategies including the valley theory the urban border zone concept and the regional concept of Patrick Geddes In the case study of contemporary Holland he details what a small densely populated country has been able to achieve through design planning rooted in environmental ethics Future Frontiers for Urban Design the culminating section of this groundbreaking book opens with Golany's vision of the future city He examines the issues of thermal performance and climate as they relate to urban design and offers the concept of geospace the earth enveloped habitat Buttressing his presentation with detailed information on the mechanics of geospace Golany describes case studies of the successful use of earth enveloped habitats in China and Tunisia He makes a powerful argument for the geospace city as a renewal of ancient tradition that can restore the vital equilibrium between nature and human settlements that we seem to have lost *Ethics and Urban Design* is a distinguished scholar's analysis and prescription for the city it offers an abundance of stimulating ideas for the architects designers and planners who have assumed responsibility for its future *Ethics and Urban Design* draws on historical examples and contemporary case studies from around the world to illustrate urban design

strategies that can help restore equilibrium to the natural social and built environments of the city In this stimulating book urban design scholar Gideon Golany offers architects designers and planners both an in depth analysis of the fundamental issues of urban design and practical options for the design of the future city Examines the genesis and development of the city from the earliest settlements to the rise of urban society Presents urban design strategies based on historical examples of early urban centers including Mesopotamia the Indus River Valley Egypt and China Offers case studies of environmental success stories from Europe Asia and Africa Details geospace design options the use of underground space for diversified land use housing and transportation Fully illustrated with over 80 photographs drawings and diagrams

Planning Theory Robert Burchell, 2017-09-04 Theory and practice in city planning have never been known for their compatibility The planner dealing with stresses such as the personalities at work in a board meeting and coping with the realities of fund raising political realities and the like can find little guidance in the theory of the trade The issues of poverty groups whether rural or urban the provision of services and the packaging of them are seemingly insuperable The sheer frustration in the inability to deliver which so many planners feel can result in considerable impatience and a questioning of the relevance of theory The editors argue that this state of affairs though understandable is unacceptable While short range meliorism without sense of perspective may be good for the practitioner's individual psyche the cost may be borne by the long run best interests of the groups to be served The risks of a lack of perspective and the experiences generated by this phenomenon are too serious in their implications to permit the process to continue In this new age of anxiety it is essential for both planners and theorists to understand their roles as well as provide guidance in shaping them Burchell and Sternlieb have thus gathered here a variety of individuals all of whom in their separate and distinct fashions are seasoned both in practice and in theory The book is divided into five sections Physical Planning in Change Social Planning in Change Public Policy Planning in Change Economic Planning in Change and a final section detailing the roles of planners and who they are These shared puzzlements and insights will prove useful to all practitioners and theorists in the planning field
