

Red Clover Science

Inderjit

Red Clover Science:

Red Clover Science N.L. Taylor, K. H. Quesenberry, 1996-10-31 This book examines the literature on red clover since about 1985. In each of the 17 chapters an effort was made to summarize the earlier literature and to integrate the recent findings into this background. The timing is appropriate with the present interest in sustainable agriculture in which red clover was so prominent in the past. This is the first book to be published which deals solely with this important forage species. Audience: Primarily scientists and scientifically trained technicians who will appreciate an up to date summary on red clover. Red Clover Science N.L. Taylor, Kenneth Quesenberry, 2014-03-14 **The Red Clover** Krystyna

Żuk-Gołaszewska, 2017 Red clover *Trifolium pratense* L is one of the many species belonging to the genus *Trifolium* which are widely cultivated around the world. It is a perennial plant and offers permanence that determines its uses as well as environmental and agronomic requirements. Red clover is grown mainly for seeds and biomass. The most important environmental factors that affect red clover yield are soil conditions, temperature and precipitation during the growing season. Key agronomic factors include sowing date, cultivation regime, fertilization, plant protection and harvesting date. The species can be grown in pure and mixed stands with alfalfa, cereals and various grass species. Newly bred triploid varieties of red clover are characterized by desirable growth habit traits and yield components as well as high yield. Red clover has many applications. It is currently experiencing a revival of interest as a traditional folk remedy. The species acts as a rich source of compounds with expectorant, analgesic and antiseptic properties. The callus from *Trifolium pratense* has been found to exert inhibitory effects on fungal and bacterial strains. Red clover contains isoflavones, anthocyanin pigments and phytoestrogens which may help reduce the risk of heart disease, breast cancer and endometrial cancer. It also alleviates menopausal symptoms. Red clover lowers blood cholesterol levels and helps prevent prostate cancer. Red clover ointments are used to treat skin diseases including psoriasis. Red clover provides biomass for livestock nutrition and/or biogas production. It has high nutritional value and constitutes valuable raw material for silage making. Red clover can be grown with grasses, barley, oats and wheat, thus providing various types of fodder with high biological value and natural high protein feed. When grown as a cover crop, red clover fixes and supplies nitrogen to cereal crops. It also helps break disease and insect cycles, especially in plantations protected against weeds. The crude protein content of red clover decreases with advancing maturity. Due to its permanence, this perennial plant contributes to environmental protection and amelioration; it helps prevent soil erosion and is used in phytoremediation and barren land management schemes. **Principles of Seed Science and Technology**

Lawrence O. Copeland, Miller F. McDonald, 2012-12-06 This Fourth Edition of *Principles of Seed Science and Technology* like the first three editions is written for the advanced undergraduate student or lay person who desires an introduction to the science and technology of seeds. The first nine chapters present the seed as a biological system and cover its origin, development, composition, function and sometimes nonfunction, performance and ultimate deterioration. The last nine chapters

present the fundamentals of how seeds are produced conditioned evaluated and distributed in our modern agricultural society Two new chapters have been added in this fourth edition one on seed ecology and the second on seed drying Finally revisions have been made throughout to reflect changes that have occurred in the seed industry since publication of the Third Edition Because of the fundamental importance of seeds to both agriculture and to all of society we have taken great care to present the science and technology of seeds with the respect and feeling this study deserves We hope that this feeling will be communicated to our readers Furthermore we have attempted to present information in a straight forward easy to read manner that will be easily understood by students and lay persons alike Special care has been taken to address both current state of the art as well as future trends in seed technology

Clover Science and Technology Norman L. Taylor,1985 The contents of this monograph provide a foundation and direction for further research into the basic biological and agricultural sciences that support clover production utilization development and technology Many of the chapters are of a general nature which apply to the clovers as a genus In addition several chapters focus on individual species or groups of species that are of agricultural importance in North America
