Sense Of Being Stared At And Other Unexplained Powers Of The Human Mind:

The Sense of Being Stared At Rupert Sheldrake, 2013-06-22 Explores Rupert Sheldrake's more than 25 years of research into telepathy, staring and intention precognition and animal premonitions. Shows that unexplained human abilities such as the sense of being stared at and phone telepathy are not paranormal but normal part of our biological nature. Draws on more than 5 000 case histories, 4 000 questionnaire responses and the results of experiments carried out with more than 20 000 people. Reveals that our minds and intentions extend beyond our brains into the world around us and even into the future. Nearly everyone has experienced the feeling of being watched or had their stare result in a glance in their direction. The phenomenon has been cited throughout history in nearly every culture along with other commonplace paranormal occurrences such as premonitions and telepathy. In this newly updated edition, Sheldrake shares his more than 25 years of research into telepathy, the power of staring, remote viewing, precognition and animal premonitions. Drawing on more than 5 000 case histories, 4 000 questionnaire responses and the results of experiments on staring, thought transference, phone telepathy and other phenomena carried out with more than 20 000 people as well as reports and data from dozens of independent research teams, Sheldrake shows that these unexplained human abilities such as the sense of being stared at are not paranormal but normal part of our biological nature. He reveals that telepathy depends on social bonds and traces its evolution from the connections between members of animal groups such as flocks, schools and packs. Sheldrake shows that our minds and intentions extend beyond our brains into our surroundings with invisible connections that link us to each other, to the world around us and even to the future.

The Sense of Being Stared At Rupert Sheldrake, 2011-07-20 Most of us know it well, the almost physical sensation that we are the object of someone's attention. Is the feeling all in our heads? What about related phenomena such as telepathy and premonitions? Are they merely subjective beliefs? In *The Sense of Being Stared At*, renowned biologist Rupert Sheldrake explores the intricacies of the mind and discovers that our perceptive abilities are stronger than most of us could have imagined. Sheldrake argues persuasively in this compelling book that such phenomena are in fact real. He rejects the label of paranormal and shows how these psychic occurrences are in fact a normal part of human nature. Combining the tradition of pragmatic experimentation with a refusal to accept the conventional answers to explain such phenomena, Sheldrake pioneers an intriguing new inquiry into the mysteries of our deepest nature. Rigorously researched yet completely accessible, this groundbreaking book provides a refreshing new way of thinking about ourselves and our relationships with other people, animals and the world around us. From the Trade Paperback edition.

The Archaeology of Art Andrew Meirion Jones,Andrew Cochrane,2018-05-20 How can archaeologists interpret ancient art and images if they do not treat them as symbols or signifiers of identity Traditional approaches to the archaeology of art have borrowed from the history of art and the anthropology of art by focusing on iconography meaning communication and identity This puts the archaeology of art at a disadvantage as an understanding of iconography and meaning requires a detailed knowledge of historical or ethnographic context unavailable to many archaeologists Rather than playing to archaeology s weaknesses the authors argue that an archaeology of art should instead play to archaeology s strength the material character of archaeological evidence Using case studies examining rock art figurines beadwork murals coffin decorations sculpture and architecture from Europe the Americas Asia Australia and north Africa the authors develop an understanding of the affective and effective nature of ancient art and imagery An analysis of a series of material based practices from gesture and improvisation to miniaturisation and gigantism assembly and disassembly and the use of distinctions in colour enable key concepts such as style and meaning to be re imagined as affective practices Recasting the archaeology of art as the study of affects offers a new prospectus for the study of ancient art and imagery

Ordaining Reality in Brief Joseph E. Donlan, 2009 Many people believe in the Power of Positive Thinking but no one had succeeded in credibly explaining how mere thoughts can tangibly influence future occurrences To explain the connection Joseph Donlan presented highly plausible theories in two preceding books Each of these books presents a new paradigm of nature and couples it with a convincing explanation of how our right brain hemispheres have a unique ability to tap into the hidden domain of the metaphysical This final book in the series also supports these premises however it does so at a higher more condensed level so that readers with no background in science can gain enough information to appreciate the divergent worlds of physics and metaphysics and gain a view of nature that undeniably links mind to matter *Science and the Self* Ian James Kidd, Liz McKinnell, 2015-08-27 Mary Midgley is one of the most important moral philosophers working today Over the last thirty years her writings have informed debates concerning animals the environment and evolutionary theory The invited essays in this volume offer critical reflections upon Midgley's work and further developments of her ideas The contributors include many of the leading commentators on her work including distinguished figures from the disciplines of

Darwin, Divinity, and the Dance of the Cosmos

Bruce Sanguin, 2007 In March 2005 the United Nations released its Millennium Ecosystem Assessment Among the findings 23 of the world's ecosystems are seriously degraded 90 percent of the world's fish stocks are depleted and climate change is not just something that might happen it is already upon us Many people including many Christians will hear this and delude themselves into thinking that technology can and will save the day A wiser and more helpful response especially for Christians is to find a way to step back into the flow of nature from which we have extricated ourselves In Darwin Divinity and the Dance of the Cosmos Bruce Sanguin shows us the way Sanguin draws on the latest scientific understandings of the nature of the universe and weaves them together with biblical meta narratives and frequently overlooked strands of the Judeo Christian tradition to create an ecological and truly evolutionary Christian theology a feat few theologians have even attempted This book and more importantly the work of integration it suggests represents a fundamental challenge to our theological and liturgical models But for those who are ready and willing to embark on an exciting theological journey of discovery it also represents a rich opportunity to become reacquainted with the Spirit of God moving in and through the very dynamics of an unfolding universe In Darwin Divinity and the Dance of the Cosmos Sanguin draws on the latest scientific understandings of the nature of the universe and weaves them together with biblical meta narratives and frequently overlooked strands of the Judeo Christian tradition to create an ecological and truly evolutionary Christian theology

Parapsychology Etzel Cardeña, John Palmer, David Marcusson-Clavertz, 2015-07-25 Many people have experienced such unusual phenomena as dreams that later seem to correspond with unforeseeable events thinking of a long lost friend just before he or she unexpectedly calls or the ability to feel the presence of deceased loved ones What many do not realize is that these types of experiences have been researched for more than a century by eminent scientists including Nobel laureates Most of these researchers have concluded that some of these phenomena do occur although we are far from explaining them to everyone's satisfaction This book is the first in almost 40 years to provide a comprehensive scientific overview of research

in the field of parapsychology explaining what we know and don't know about so called psi phenomena such as telepathy precognition or psychokinesis Contributors evaluate the evidence for these phenomena accounting for factors such as selective memory wish fulfillment and incorrect methods or analyses in some cases offering psychological physical and biological theories
