Senses Considered As Perceptual Systems:

The Senses Considered as Perceptual Systems James Jerome Gibson, 1966 Dr Gibson does not treat of the different senses as mere producers of visual auditory tactual or other sensations Rather he regards them as active seeking mechanisms for looking listening touching and the like This means that the emphasis is on explanations of how we are able to have the constant perceptions that we need for effective action and avoidance of physical harm in our everyday lives The author clearly supports his view that the perception of reality is not something assembled or computed by the brain from an ever varying kaleidoscope of sensations He emphasizes the importance of regarding the different perceptual systems not only as active but also interrelated

Phenomenology of the Human Person Robert Sokolowski, 2008-05-12 In this book Robert Sokolowski argues that being a person means to be involved with truth He shows that human reason is established by syntactic composition in language pictures and actions and that we understand things when they are presented to us through syntax Sokolowski highlights the role of the spoken word in human reason and examines the bodily and neurological basis for human experience Drawing on Husserl and Aristotle as well as Aquinas and Henry James Sokolowski here employs phenomenology in a highly original way in order to clarify what we are as human agents

The Texture of Mystery J. Bradley Wigger, 1998 This book relies upon the revolutionary work of James Jerome Gibson and his ecological approach to perception in order to reconstruct some basic assumptions about sensing knowing and learning Instead of a closed system Gibson s work can be understood as corresponding to an open systems universe Learning has to do with how bodily perceptive systems attend to the inexhaustible and inherently meaningful reality in which we discover ourselves

Biology of Perceptual Systems Edward Carterette, 2012-12-02 Handbook of Perception

Volume III Biology of Perceptual Systems reviews the literature on the biological aspects of human perception with emphasis on perceptual systems and elements of sensory physiology This volume is organized into 19 chapters and begins with a discussion of energy transduction detection and discrimination along with the properties of neurons alone and as conjoined in nets The focus then shifts to psychogenesis the relatively new field of ethology and the natural diversity and evolutionary divergence of sensory systems The chapters that follow examine the genetics of behavior the facts and theories about the way in which animals and men construct patterned stimulation of receptors into significant objects and the structure and function of sensory systems on which vertebrates depend for their construction of the varieties of experience The book methodically introduces the reader to chemoreception tasting and smelling cutaneous mechanoreception of position velocity transients active texture perception mechanisms of spatial orientation and of motion in space thermoreception vision and audition In almost every case the underlying physiological mechanisms are related to the psychophysical or perceptual observations This book is a valuable resource for psychologists biologists and natural scientists as well as for those who are interested in the biology of human perception *The Senses Considered as Perceptual Systems. [With Illustrations.] (Under the Editorship of Leonard Carmichael.).* James Jerome Gibson, 1968 *The Ecological Approach To Visual Perception* James J. Gibson, 2013-05-13 This is a book about how we see the environment around us its surfaces their layout and their colors and textures where we are in the environment whether or not we are moving and if we are where we are going what things are good for how to do things to thread a needle or drive an automobile or why things look as they do The basic assumption is that vision depends on the eye which is connected to the brain The author suggests that natural vision depends on the eyes in the head on a body supported by the ground the brain being only the central organ of a complete visual system When no constraints are put on the visual system people look around walk up to something interesting and move around it so as to see it from all sides and go from one vista to another That is natural vision and what this book is about **Sensory Design** Joy Monice Malnar, 2004 Malnar architecture U of Illinois Urbana Champaign and Vodvarka fine arts Loyola U Chicago explore the nature of sensory response to the spatial constructs that people invest with meaning ranging from buildings of various sorts and purposes to gardens to constructions of fantasy These responses can serve as a typology for the design of si

Research Methods for Architecture Ray Lucas, Raymond Lucas, 2016-01-18 While fundamentally a design discipline architectural education requires an element of history and theory grouped under the term research However many students struggle with this part of their course This practical handbook provides the necessary grounding in this subject addressing essential questions about what research in architecture can be The first part of the book is a general guide to the fundamentals of how to do research from assembling a literature review to conducting an interview The second section presents a selection of case studies dealing with such topics as environmental psychology the politics of space ethnographic research and mapping *Access and Mediation* Maren Wehrle, Diego D'Angelo, Elizaveta Solomonova, 2022-02-07 Recent

years have seen a rise in interdisciplinary approaches to the study of the mind. However, relatively little emphasis has been placed on attention, its functions, and phenomenology. As a result, there are a multitude of definitions and explanatory frameworks that describe what attention is, what it does, and how it works. This volume proposes that one way to discuss attention is by utilizing an integrative multidisciplinary framework that takes into consideration aspects of attention as a means of accessing the world and as a mediator of experience. It brings together contributions from cognitive science, philosophy, and psychology in order to shed light on these aspects of attention. By including both theoretical and empirical approaches to attention, this volume will provide 1) an innovative framework for examining attention as something that mediates experience and 2) new perspectives on foundational and definitional issues of what attention is and how it contributes to our ability to access the world. By drawing together different disciplines, this volume broadens the concept of attention. It opens up a new way of looking at attention as an active process through which the world is disclosed for us.

The Responsive Environment Larry D. Busbea, 2020-01-21. How new conceptions of human environment interaction became central to design theories and practices in the 1970s. At the end of the 1960s, new models of responsiveness between humans and their environments had a profound impact on theories and practices in architecture, design, art, technology, media, and the sciences. The resulting initiatives, design philosophies, art installations, architectural projects, exhibitions, publications, and symposia sought to bring together insights from biology, systems theory, psychology, and anthropology with modernist legacies of total design. In *The Responsive Environment*, Larry D. Busbea takes up this concept of environment as an object and method of design at the height of its aesthetic, technical, and discursive elaboration. Exploring emerging paradigms of environmental perception, patterning, and control as developed by Gregory Bateson, Edward T. Hall, Wolf Hilbertz, Gyrgy Kepes, Marshall McLuhan, Nicholas Negroponte, Paolo Soleri, and others, he shows how living space itself was reimagined as a domain capable of modification through input from its newly sensitized inhabitants. *The Responsive Environment* intercuts the development of new ideas about environmental awareness with case studies of specific architecture and design projects for responsive environments. Throughout, Busbea connects these theories and practices to the contemporary obsession with smart things, responsive technologies, intelligent environments, biomimetic materials, and digital atmospherics.

Lectures on Perception Michael T. Turvey, 2018-10-31. *Lectures on Perception: An Ecological Perspective* addresses the generic principles by which each and every kind of life form, from single-celled organisms (e.g., diatoms) to multi-celled organisms (e.g., primates), perceives the circumstances of their living so that they can behave adaptively. It focuses on the fundamental ability that relates each and every organism to its surroundings, namely, the ability to perceive things in the sense of how to get about among them and what to do or not to do with them. The book's core thesis breaks from the conventional interpretation of perception as a form of abduction based on innate hypotheses and acquired knowledge and from the historical scientific focus on the perceptual abilities of animals, most especially those abilities ascribed to humankind. Specifically, it advances the

thesis of perception as a matter of laws and principles at nature's ecological scale and gives equal theoretical consideration to the perceptual achievements of all of the classically defined kingdoms of organisms Archaea Bacteria Protocista Fungi Plantae and Animalia

Current Issues in Philosophy of Mind Anthony O'Hear, 1998 Contemporary Issues in Philosophy of Mind brings together leading figures in the area from Britain and the US who lay out their thoughts on key issues in an accessible way

Key Thinkers in Psychology Rom Harré, 2006 The author presents an accessible textbook combining the personal history of the major protagonists of the last century organised by schools of thought with their significant contributions to the discipline

Tactual Perception William Schiff, Emerson Foulke, 1982-03-31 An overview of knowledge about tactual haptic perception

Aesthetics beyond the Arts Arnold Berleant, 2016-03-23 Taking the view that aesthetics is a study grounded in perception the essays in this volume exhibit many sides of the perceptual complex that is the aesthetic field and develop them in different ways They reinvigorate our understanding of such arts as music and architecture they range across the natural landscape to the urban one they reassess the place of beauty in the modern environment and reassess the significance of the contributions to aesthetic theory of Kant and Dewey and they broach the kinds of meanings and larger understanding that aesthetic engagement with the human environment can offer Written over the past decade these original and innovative essays lead to a fresh encounter with the possibilities of aesthetic experience one which has constantly evolved moving in recent years in the direction of what Berleant terms social aesthetics which enhances human environmental integration and sociality

Theorizing Built Form and Culture Kapila D. Silva, Nisha A. Fernando, 2024-03-08 In this collection of essays Theorizing Built Form and Culture The Legacy of Amos Rapoport a felicitation volume to celebrate the significance of Professor Amos Rapoport's lifelong scholarship scholars from around the world discuss the analytical relevance expansion and continuing application of these contributions in developing an advanced understanding of mutual relationships between people and built environments across cultures Professor Amos Rapoport has espoused an intellectual and theoretical legacy on environmental design scholarship that explains how cultural factors play a significant role in the ways people create and use environments as well as the way environments in turn influence people's behavior This volume presents a hitherto not seen unique and singular work that simultaneously articulates a cohesive framework of Rapoport's architectural theories and demonstrates how that theoretical approach be used in architectural inquiry education and practice across environmental scales types and cultural contexts It also acknowledges for the very first time how this theoretical legacy has pioneered the decolonizing of the Eurocentric approaches to architectural inquiry and has thus privileged an inclusive cross cultural perspective that laid the groundwork to understand and analyze non Western design traditions The book thus reflects a wide range of cross cultural and cross contextual range to which Professor Rapoport's theories apply a general notion of theoretical validity he always advocated for in his own writings The volume is a paramount source for scholars and students of architecture who are interested in understanding how culture mediates the creation use
