customers As this book relates in order to do so the project consortium merged two advanced communications technologies ATM and PON with contributions from many other disciplines to create a demonstrator which has been subject to extensive trials and testing which have been fruitful both in contributions to international standards and in development work to improve further future generations of the system This book forms an important reference source through the experience gained in this unique experiment in advanced telecommunications Another significant feature of the project should not be overlooked however When the European Commission first began looking at supporting industrial research in Europe in the mid 1980s it was clear that we had important strengths in telecommunications It was equally clear that a revolution was on the way the digital revolution and European pre eminence in the field was not guaranteed for ever **InfoWorld**
