New Horizons in Chinese Linguistics C-T James Huang, Audrey Li Yen Hui, 2012-12-06 The past decade and a half has witnessed a great deal of renewed interest in the study of Chinese linguistics not only in the traditional areas of philological studies and in theoretically oriented areas of synchronic grammar and language change but also in the cultivation of new frontiers in related areas of the cognitive sciences There is a significant increase in the number of students studying one area or another of the linguistic structure of Chinese in various linguistic programs in the United States Europe Australia and in China Hong Kong Singapore Taiwan and other parts of Asia Several new academic departments devoted to the study of linguistics have been established in Taiwan and Hong Kong in the past few years The increasing research and study activities have also resulted in a number of national and international conferences including the North American Conference on Chinese Linguistics NACCL which has been held annually in the United States the International Symposium on Chinese Languages and Linguistics IsCLL which has had its fourth meeting since it was launched by Academia Sinica in Taiwan in 1990 the International Association of Chinese Linguistics IACL created in Singapore in 1992 and now incorporated in Irvine California which has held its annual meetings at major institutions in Asia Europe and the US

Child Language William Snyder, 2007-06-21 This is a systematic presentation of the parametric approach to child language Linguistic theory seeks to

specify the range of grammars permitted by the human language faculty and thereby to specify the child's hypothesis space during language acquisition. Theories of language variation have central implications for the study of child language and vice versa. Yet the acquisitional predictions of such theories are seldom tested against attested data. This book aims to redress this neglect. It considers the nature of the information the child must acquire according to the various linguistic theories. In doing so it sets out in detail the practical aspects of acquisitional research, addresses the challenges of working with children of different ages and shows how the resulting data can be used to test theories of grammatical variation. Particular topics examined in depth include the acquisition of syllable structure, empty categories and wh movement. The data sets on which the book draws are freely available to students and researchers via a website maintained by the author. The book is written for scholars and students of child language acquisition in linguistics, psychology and cognitive science. It will be a valuable reference for researchers in child language acquisition in all fields.

Child Language Acquisition Ben Ambridge, Elena V. M. Lieven, 2011-03-17. Is children's language acquisition based on innate linguistic structures or built from cognitive and communicative skills? This book summarises the major theoretical debates in all of the core domains of child language acquisition research: phonology, word learning, inflectional morphology, syntax and binding, and includes a complete introduction to the two major contrasting theoretical approaches: generativist and constructivist. For each debate, the predictions of the competing accounts are closely and even-handedly evaluated against the empirical data. The result is an evidence-based review of the central issues in language acquisition research that will constitute a valuable resource for students, teachers, course builders and researchers alike.

Syntax Peter W. Culicover, 1982. The Crosslinguistic Study of Language Acquisition Dan Isaac Slobin, 2014-02-25. Continuing the tradition of this series which has become a standard reference work in language acquisition, Volume 4 contains chapters on three additional languages/language groups: Finnish, Greek and Korean. The chapters are selective critical reviews rather than exhaustive summaries of the course of development of each language. Authors approach the language in question as a case study in a potential crosslinguistic typology of acquisitional problems, considering those data which contribute to issues of general theoretical concern in developmental psycholinguistics and linguistic theory. Each chapter therefore provides the following: Grammatical Sketch of Language: Brief grammatical sketch of the language or language group, presenting those linguistic facts which are relevant to the developmental analysis; Sources of Evidence: Summary of basic sources of evidence, characterizing methods of gathering data and listing key references; Overall Course of Development: Brief summary of the overall course of development in the language or language group, giving an idea of the general problems posed to the child in acquiring a language of this type, summarizing typical errors, domains of relatively error-free acquisition and the timing of acquisition; Areas of the grammar that show relatively precocious or delayed development in crosslinguistic perspective; Data: Specific developmental aspects of the language examined in depth, depending on each individual language and available acquisition data; Conclusions: An

interpretive summary of theoretical points raised above attending to general principles of language development and linguistic organization suggested by the study of a language of this type plus comparisons with development of other languages Research in Education ,1971 **Experience, Variation and Generalization** Inbal Arnon,Eve V. Clark,2011 Are all children exposed to the same linguistic input and do they follow the same route in acquisition The answer is no The language that children hear differs even within a social class or cultural setting as do the paths individual children take The linguistic signal itself is also variable both within and across speakers the same sound is different across words the same speech act can be realized with different constructions The challenge here is to explain given their diversity of experience how children arrive at similar generalizations about their first language This volume brings together studies of phonology morphology and syntax in development to present a new perspective on how experience and variation shape children s linguistic generalizations The papers deal with variation in forms learning processes and speaker features and assess the impact of variation on the mechanisms and outcomes of language learning **Evaluation of Theories on Child Grammars** Ton van der Geest,2019-01-14 No detailed description available for Evaluation of Theories on Child Grammars

Mechanisms of Language Acquisition Brian MacWhinney,2014-02-04 First published in 1987 Three decades of intensive study of language development have led to an enormous accumulation of descriptive data But there is still no overarching theory of language development that can make orderly sense of this huge stockpile of observations Grand structuralist theories such as those of Chomsky Jakobson and Piaget have kept researchers asking the right questions but they seldom allow us to make detailed experimental predictions or to formulate detailed accounts The papers collected in this volume attempt to address this gap between data and theory by formulating a series of mechanistic accounts of the acquisition of language **Journal of Educational Research Monographs** ,1922 Grammatical Features and the Acquisition of Reference Sergio Baauw,2013-12-16 This book discusses to what extent errors young children make with their interpretation of definite articles and pronouns are due to their immature pragmatic skills and to what extent incomplete syntactic development plays a role *MIT Working Papers in Linguistics* ,1994 **Competing Motivations in Grammar and Usage** Brian MacWhinney,Andreï L'vovich Mal'chukov,Edith A. Moravcsik,2014 This volume examines the conflicting factors that shape the content and form of grammatical rules in language usage Speakers and addressees need to contend with these rules when expressing themselves and when trying to comprehend messages For example there are on going competitions between the speaker s interests and the addressee s needs or between constraints imposed by grammar and those imposed by online processing These competitions influence a wide variety of systems including case marking agreement and word order politeness forms lexical choices and the position of relative clauses Chapters in the book analyse grammar and usage in adult language as well as first and second language acquisition and the motivations that drive historical change Several of the chapters seek explanations for the competitions involved based on earlier accounts including

the Competition Model Natural Morphology the functional typological tradition and Optimality Theory The book will be of interest to linguists from a wide variety of backgrounds particularly those interested in psycholinguistics historical linguistics philosophy of language and language acquisition from advanced undergraduate level upwards The Cambridge Handbook of Child Language Edith L. Bavin, Letitia R. Naigles, 2015-11-26 The most authoritative resource for students and researchers The Cambridge Handbook of Child Language has been thoroughly updated and extended Enhancements include new chapters on the acquisition of words processing deficits in children with specific language impairments and language in children with Williams syndrome new authors for the bilingualism and autism chapters a refocused discourse chapter on written narratives and a new section on reading and reading disorders cementing the handbook's position as the best study of the subject available In a wide ranging survey language development is traced from prelinguistic infancy to adolescence in typical and atypical contexts the material is intuitively grouped into six thematic sections enabling readers to easily find specific in depth information With topics as varied as statistical learning bilingualism and the neurobiology of reading disorders this multidisciplinary Handbook is an essential reference for students and researchers in linguistics psychology cognitive science speech pathology education and anthropology *Child Language* Barbara C. Lust, 2006-09-21 The remarkable way in which young children acquire language has long fascinated linguists and developmental psychologists alike Language is a skill that we have essentially mastered by the age of three and with incredible ease and speed despite the complexity of the task This accessible textbook introduces the field of child language acquisition exploring language development from birth Setting out the key theoretical debates it considers questions such as what characteristics of the human mind make it possible to acquire language how far acquisition is biologically programmed and how far it is influenced by our environment what makes second language learning in adulthood different from first language acquisition and whether the specific stages in language development are universal across languages Clear and comprehensive it is set to become a key text for all courses in child language acquisition within linguistics developmental psychology and cognitive science

The Child's Conception of Language A. Sinclair, R. J. Jarvella, W. J. M. Levelt, 2013-03-12 It is obvious that the growing child manifests an increasing understanding of his language and facility to use it A major part of the child language literature is concerned with the child's developing linguistic and communicative competence Scattered evidence also shows however that children become progressively more aware of language as Zlanguage It is interesting to consider in what ways the internal structure and mechanisms of language become more accessible Little is known about linguistic awareness of this kind the role it plays or how it develops When the new Projektgruppe fUr Psycholinguistik of the Max Planck Gesellschaft was founded the child's conception of language in analogy to Piaget's child's conception of the physical world became one of the research unit's topics of study As previous work on linguistic awareness was largely amorphous we first organized a kind of conference workshop with some of those who had worked in the area The aims of this meeting were to map out the field of

study detail the phenomena of interest and define major theoretical issues The meeting took place just after the creation of the project group on May 3 7 1977 The participants were psychologists and linguists who had either published work on metalinguistic issues in child language or who could be expected to contribute substantially to the discussion This book is a direct outcome of that conference though it is not a complete reflection of the papers presented or of the discussion that took place
