Pirke,W. Vandereycken,Detlev Ploog,2012-12-06 Research and Treatment in the Psychobiology of Bulimia Nervosa 1/2 K M Pirke and W Vandereycken When we were preparing this book the main purpose was to gather the latest insights from both basic and clinical research in bulimic disorders The burgeoning scientific interest in eating disorders forced us to restrict the focus in such a way that attention was only paid to psychobiological aspects of disturbed nutrition and behavior This implied that other important aspects like sociocultural and familial factors had to be excluded But it turned out that even with such a restricted scope the subject was not an easy one A review of the contributions to this volume clearly shows that our present understanding of bulimia nervosa is still very small Reviewing the hypothalamic and especially neuroendocrine regulation of nutrient balance Bray has emphasized the importance of the autonomic nervous system in regulating food intake and energy expenditure The role of insulin adrenal steroids gonadal steroids and growth hormone in modulating nutrient intake and storage were discussed The studies by Jimerson et al Schweiger et al and Fichter et al show that all these factors are altered in bulimic patients indicating that the whole system of regulating food intake and storage is severely disturbed in bulimia nervosa Evidence has been presented that neurotransmitter alterations may occur in bulimia Jimerson et al **The Psychology of**

Nutrition David Booth, 2016-05-06 This title explores the psychological processes involved in the selection and consumption of foods and drink. The exposition is firmly linked to research evidence on the cognitive, socio-economic and physiological influences on the desire to eat and drink. The basic theory is that appetite is a learned response to a recognized complex of cues from foods, the body and the social and physical environment. The volume starts with infant care-giver interactions in feeding, then moves on to consider how physical and social maturation in Western culture affects attitudes to foods, concentrating on the phenomena of ordinary dieting and the extremes of disordered eating. The concluding chapters deal with the process within the lives of individual consumers which causes the same eating habits to form in different segments of society. It also looks at food technology, marketing and governmental regulation. The Psychology of Nutrition tackles questions about what goes on in eaters and drinkers' minds about the foods and beverages they are consuming and about the cultural meaning of the eating occasion in industrialized cultures. **Nutritional Modulators of Pain in the Aging**

Population Ronald Ross Watson, Sherma Zibadi, 2017-01-25 Nutritional Modulators of Pain in the Aging Population provides an overview on the role of foods, dietary supplements, obesity and nutrients in the prevention and amelioration of pain in various diseases in the aging population. National Library of Medicine (U.S.), First multi-year cumulation covers six years 1965-70. *Handbook of the Behavioral Neurobiology of Serotonin* Christian P. Muller, Barry Jacobs, 2009-12-30 Serotonin (5-hydroxytryptamine, often cited as 5-HT) is one of the major excitatory neurotransmitter and the serotonergic system is one of the best studied and understood transmitter systems. It is crucially involved in the organization of virtually all behaviours and in the regulation of emotion and mood. Alterations in the serotonergic system induced by e.g. learning or pathological processes underlie behavioural plasticity and changes in mood which can finally result in abnormal behaviour and psychiatric conditions. Not surprisingly the serotonergic system and its functional components appear to be targets for a multitude of pharmacological treatments. Examples of very successful drugs targeting the serotonergic system include Prozac and Zoloft. The last decades of research have not only fundamentally expanded our view on serotonin but also revealed in much more detail an astonishing complexity of this system which comprises a multitude of receptors and signalling pathways. A detailed view on its role in basal but also

complex behaviours emerged and was presented in a number of single review articles. Although much is known now the serotonergic system is still a fast growing field of research contributing to our present understanding of the brain's function during normal and disturbed behaviour. This handbook aims towards a detailed and comprehensive overview over the many facets of behavioural serotonin research. As such it will provide the most up to date and thorough reading concerning the serotonergic system's control of behaviour and mood in animals and humans. The goal is to create a systematic overview and first hand reference that can be used by students and scholars alike in the fields of genetics, anatomy, pharmacology, physiology, behavioural neuroscience, pathology and psychiatry. The chapters in this book will be written by leading scientists in this field. Most of them have already written excellent reviews in their field of expertise. The book is divided in 4 sections. After an historical introduction illustrating the growth of ideas about serotonin function in behaviour of the last forty years, section A will focus on the functional anatomy of the serotonergic system. Section B provides a review of the neurophysiology of the serotonergic system and its single components. In section C the involvement of serotonin in behavioural organization will be discussed in great detail while section D deals with the role of serotonin in behavioural pathologies and psychiatric disorders. The first handbook broadly discussing the behavioral neurobiology of the serotonergic transmitter system. Co-edited by one of the pioneers and opinion leaders of the past decades, Barry Jacobs, Princeton, with an international list of 10 countries of highly regarded contributors providing over 50 chapters and including the leaders in the field in number of articles and citations. K. P. Lesch, T. Sharp, A. Caspi, P. Blier, G. K. Aghajanian, E. C. Azmitia and others. The only integrated and complete resource on the market containing the best information integrating international research providing a global perspective to an international community. Of great value not only for researchers and experts but also for students and clinicians as a background reference.
