Sertoli Cell Biology:

Sertoli Cell Biology Michael K. Skinner, Michael D. Griswold, 2004-11-23 Sertoli cells assist in the production of sperm in the male reproductive system This book provides a state of the art update on the topic of sertoli cells and male reproduction It addresses such highly topical areas as stem cells genomics and molecular genetics as well as provides historical information on the discovery of this type of cell and the pathophysiology of male infertility Presents the state of the art research on topics such as stem cell research transplantation and genomics Includes contributions from leaders in the field including several members of the National Academy of Science *Sertoli Cell Metabolism and Spermatogenesis* Pedro F. Oliveira, Marco G. Alves, 2015-11-29 This book is focused on Sertoli cell physiology and its role in the spermatogenic event These cells known as nurse cells are essential for the normal development of germ cells by offering not only physical support and creating an immune privileged environment but also for providing nutritional support The presence of Sertoli cells promotes the establishment of the appropriate microenvironment so that spermatogenesis may occur Spermatogenesis maintenance in vivo is highly dependent on the metabolic cooperation established between Sertoli cells and developing germ cells For many years this metabolic cooperation between testicular cells has been disregarded but recent advances have highlighted the relevance of these processes for male fertility Thus the understanding of the functioning and regulation of these metabolic processes is a crucial step to identify key mechanisms associated with Sertoli cell dys function and to enlighten their influence on male fertility

Regulation of Sertoli Cell and Germ Cell Differentiation R. Brehm, Klaus Steger, 2005-09-16 Unwanted childlessness affects approximately one in six couples worldwide though the exact proportion of the predominant cause of the problem remains controversial according to the World Health Organization WHO in nearly 40% of cases the cause can be attributed to the female in 20% to the male in 25% to both and in 15% the cause remains unknown Based on these figures the incidence of male factor infertility in the general population is approximately 7% The majority of these men approximately 30% experience irreversible idiopathic infertility and cannot father children without some form of medical intervention Male factor infertility in addition may be caused by testicular germ cell cancer which is known to represent the most common cancer among young men aged 15 to 35 years in Western industrialized countries The number of affected men has increased dramatically over the past 50 years There is now growing evidence that human testicular germ cell cancer originates from fetal germ cells exhibiting an aberrant programme of gene expression and tumour progression may be favoured by an aberrant Sertoli cell germ cell communication

Regulation of Sertoli Cell and Germ Cell Differentiation R. Brehm, Klaus Steger, 2005-12-12 Unwanted childlessness affects approximately one in six couples worldwide though the exact proportion of the predominant cause of the problem remains controversial according to the World Health Organization WHO in nearly 40% of cases the cause can be attributed to the female in 20% to the male in 25% to both and in 15% the cause remains unknown Based on these figures the incidence of male factor infertility in the general

population is approximately 7% The majority of these men approximately 30% experience irreversible idiopathic infertility and cannot father children without some form of medical intervention Male factor infertility in addition may be caused by testicular germ cell cancer which is known to represent the most common cancer among young men aged 15 to 35 years in Western industrialized countries The number of affected men has increased dramatically over the past 50 years There is now growing evidence that human testicular germ cell cancer originates from fetal germ cells exhibiting an aberrant programme of gene expression and tumour progression may be favoured by an aberrant Sertoli cell germ cell communication

Cell Biology and Translational Medicine, Volume 24 Kursad Turksen, 2025-05-23 This volume in the Cell Biology and Translational Medicine series continues to explore the potential utility of stem cells in regenerative medicine Topics covered include various aspects of stem cells in regeneration both in health and cancer These include research into microenvironments signals exosomes biomaterials and their role in regeneration in general and in various types of cancer A goal of the series continues to be to highlight timely often emerging topics and novel approaches that can accelerate the utility of stem cells in regenerative medicine

Cell and Molecular Biology of the Testis Claude Desjardins, Larry L. Ewing, 1993 This book is a comprehensive multi authored work on the structure and function of the mammalian testis The approach emphasizes gene expression translation and production of specific gene products and the cellular and molecular regulation of these fundamental processes Rather than provide a global survey of all aspects of male reproduction this book stresses specific mechanisms that underscore the structure and function of the testis It explains old and new concepts from a cellular and molecular perspective This novel approach allows the authors to forge links between cell and molecular biology and well established aspects of spermatogenesis and steroidogenesis The result is a well focused comprehensive and synthetic analysis of testicular biology

Molecular Male Reproductive Medicine C. Yan Cheng, Fei Sun, 2025-04-29 This book bridges the gap of basic research in male reproductive biology and its relationship to clinical studies Bringing together a group of senior investigators with decades of experience in research and clinical investigation and keen interest in collaboration between the two areas this book provides a balanced treatment of technical and basic research insights and cutting edge findings while introducing new ideas for clinical applications of this research Section I is devoted to clinical aspects including testis biology prostate biology and spermatogenesis by senior investigators of male infertility treatment particularly non obstructive azoospermia Section II presents the latest findings in male reproductive biology from a basic research perspective as well as covering cutting edge technology such as scRNA Seq scATAC Seq DNA chromatin accessibility and organization studies genetic models cell biology molecular biology and biochemistry on testis biology and spermatogenesis This book offers not only a cohesive summary of new findings and concepts in basic and clinical male

reproductive research it analyzes and assembles these concepts into a roadmap for the next decade of translational research bringing lab discoveries to the bedside **Cell Biology and Translational Medicine, Volume 3** Kursad

Turksen,2018-11-28 Much research has focused on the basic cellular and molecular biological aspects of stem cells Much of this research has been fueled by their potential for use in regenerative medicine applications which has in turn spurred growing numbers of translational and clinical studies However more work is needed if the potential is to be realized for improvement of the lives and well being of patients with numerous diseases and conditions This book series Cell Biology and Translational Medicine CBTMED as part of SpringerNature s longstanding and very successful Advances in Experimental Medicine and Biology book series has the goal to accelerate advances by timely information exchange Emerging areas of regenerative medicine and translational aspects of stem cells are covered in each volume Outstanding researchers are recruited to highlight developments and remaining challenges in both the basic research and clinical arenas This current book is the third volume of a continuing series **Male Reproductive Anatomy** Wei Wu,2022-01-19 The male reproductive

system which is made up of the testes scrotum epididymis vas deferens seminal vesicles prostate gland bulbourethral gland ejaculatory duct urethra and penis functions mainly in the production nourishment and temporary storage of spermatozoa Epigenetic modifications are essential to regulate normal gonadal development and spermatogenesis The sperm epigenome is highly susceptible influence by a wide spectrum of environmental stimuli This book focuses on the male reproductive system discussing topics ranging from aspects of anatomy and risk factors for male infertility to clinical techniques and management of male reproductive health **Molecular Mechanisms in Spermatogenesis** C.Yan Cheng,Fei
