This is designed as a textbook for medical practitioners preparing for higher qualification examinations in pain medicine as well as a reference book for other medical and allied healthcare workers. Essential topics in pain medicine are grouped under five sections: scientific basis of pain medicine, common clinical pain conditions, pain pharmacology, interventional procedures and multidisciplinary approach. Different aspects and approaches in modern pain medicine are covered including advances in research on pain mechanism, pain psychology, epidemiology, diagnosis, pain assessment, patient evaluation, pain medications up to date, interventional procedures, cognitive behavioral therapy and other specialized therapeutic modalities.
