Perception And Understanding In Young Children An Experimental Approach:

Perception and Understanding in Young Children Peter Bryant, 2017-03-31 Originally published in 1974 This book sets forth a theory of cognitive development based on simple but powerful processes of inference The theory is applied with great ingenuity and freshness to complex phenomena found during intellectual development Dr Bryant has written an important and original book J S Bruner In this elegant timely and brief volume Dr Bryant produces strong experimental evidence which not only challenges Piaget's ideas but even more importantly synthesizes the old and new findings into a newer theory of perceptual development The importance of this book lies both in its demonstration of elegant experimental techniques in working with young children and in the optimism it will eventually bring to all concerned with their education Realizing that children can make deductive inferences at an early age educators will have to rethink some of their approaches to the teaching of young children The studies related to the understanding of number have crucial implications for the future teaching of mathematics This book will cause many people to take fresh thoughts on the subjects here dealt with and so it can be strongly recommended for all students of child development William Yule British Journal of Psychiatry

Children's Understanding Graeme S. Halford, 2014-02-25 This work argues that cognitive development is experience driven and processes entailed in acquiring information about the world are analyzed based on recent models of learning and induction The way information is represented and accessed when performing cognitive tasks is considered paying particular attention to the implications of Parallel Distributed Processing PDP models for cognitive development The first half of the book contains analyses of human reasoning processes drawing on PDP models of analogy development of strategies and task complexity all based on aspects of PDP representations It is proposed that PDP representations become more differentiated with age so more vectors can be processed in parallel with the result that structures of greater complexity can be processed This model gives an account of previously unexplained difficulties in children's reasoning including some which were influential in stage theories The second half of the book examines processes entailed in some representative cognitive developmental tasks including transitive inference deductive inference categorical syllogisms hypothesis testing learning set acquisition acquisition and transfer of relational structures humor hierarchical classification and inclusion understanding of quantity arithmetic word problems algebra conservation mechanics and the concept of mind Process accounts of tasks are emphasized based on applications of recent developments in cognitive science

Children's Logical and Mathematical Cognition C.J. Brainerd, 2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books to be devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors The flagship for the Springer Series will be a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Each volume in the Progress sequence will be strongly thematic in that it will be limited to some well defined domain of cognitive developmental research e.g. logical and mathematical development semantic development All Progress volumes will be edited collections Editors of such collections upon consultation with the Series Editor may elect to have their books published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors will be published as separate volumes within the series A fairly broad definition of cognitive development is being used in the selection of books for this series

Metalinguistic Awareness in Children W.E. Tunmer, J. Bowey, C. Pratt, R. Grieve, M. Herriman, M. Myhill, A. Nesdale, 2013-03-07 In the past fifteen years there has been a growing interest in the development of children's awareness of language as an object in itself a phenomenon now generally referred to as metalinguistic awareness Until the publication of an earlier volume in the Springer Series in Language and Communication The Child's Conception of Language edited by A. Sinclair, R. Jarvella and W. J. M. Levelt there had been no systematic treatment of metalinguistic awareness The major goal of that volume was to map out the field of study by describing the phenomenon of interest and defining major theoretical issues The aim of the present volume is to present an overview of metalinguistic awareness in children which reflects the current state of research and theory The volume is divided into three major sections The first considers various conceptual and methodological issues that have arisen from efforts to study metalinguistic awareness It addresses such questions as what is metalinguistic awareness

when does it begin to emerge and what tasks and procedures can be employed to assess its development in young children The second section critically reviews the research that has been conducted into the four general types of metalinguistic awareness phonological word syntactic and pragmatic awareness In the final section the development of metalinguistic awareness is examined in relation to general cognitive development reading acquisition bilingualism and early childhood education

Cognitive Development David Klahr, J. G. Wallace, 2022-02-16 Originally published in 1976 the authors present a theory of cognitive development based upon an information processing approach This approach leads to the presentation of precise models of performance on a number of tasks derived from a set of critical quantitative concepts elementary quantification number concepts conservation and transitivity These models encompass both early and late developmental stages and a process model of the developmental mechanism itself is outlined Here is one of the first attempts to apply the information processing view of cognitive psychology to developmental issues raised by empirical work in the Piagetian tradition It includes an extensive analysis of the processing demands of several of the classic tasks and describes the development of a system capable of performing a wide range of other tasks including the ability to be self modifying It provides an introduction to general concepts and detailed properties of cognitive models stated as production systems It will be most valuable for students in cognitive development and related courses in developmental cognitive and educational psychology as well as computer science

Bremner, David J. Lewkowicz, Charles Spence, 2012-06-21 We perceive and understand our environment using many sensory systems vision touch hearing taste smell and proprioception These multiple sensory modalities not only give us complementary sources of information about the environment but also an understanding that is richer and more complex than one modality alone could achieve As adults we integrate the multiple signals from these sense organs into unified functional representations However the ease with which we accomplish this feat belies its computational complexity Not only do the senses convey information about the environment in different neural codes but the relationship between the senses frequently changes when for example the body changes posture e g when the eyes move in their sockets or indeed shape when the body grows across development These computational problems prompt an important question which represents the key focus of this book How do we develop the ability to integrate the senses While there is a considerable literature on the development of single senses such as vision or hearing few books have considered the development of all our senses and more importantly how they develop the ability to work with each other This book is unique in exploring this extraordinary feat of human nature how we develop the ability to integrate our senses It will be an important book for all those in the fields of cognitive and developmental neuroscience *Spatial Cognition* D.
