Steven Spielberg George Lucas and Francis Ford Coppola **Recording Studio Design** Philip Newell, 2013-04-26 Philip Newell's comprehensive reference work contains pearls of wisdom which anyone involved in sound recording will want to apply to their own studio design. He discusses the fundamentals of good studio acoustics and monitoring in an exhaustive yet accessible manner. *Recording Studio Design* covers the basic principles, their application in practical circumstances, and the reasons for their importance to the daily success of recording studios. All issues are approached from the premise that most readers will be more interested in how these things affect their daily lives rather than wishing to make an in-depth study of pure acoustics. Therefore frequent reference is made to examples of actual studios, their various design problems and solutions. Because of the importance of good acoustics to the success of most studios and because of the financial burden which failure may impose, getting things right first time is essential. The advice contained in *Recording Studio Design* offers workable ways to improve the success rate of any studio, large or small.

Recording Studio Design Philip Richard Newell, 2008 Essential for anyone building, renovating or maintaining a recording studio, includes 3 whole new chapters on foldback, electrical supplies and analogue interfacing, new sections on cinema soundtrack mixing rooms and TV voice rooms. Covering acoustics, electro-acoustics and psychoacoustics, Newell uses real world studios, their problems and solutions to provide the foundations for successful studio design and maintenance. back cover

AIM The aim of the research is to study many acoustic fundamentals which are essential to design a sound recording facility The research also aims to explore as many as possible avenues of available construction techniques methodologies materials indispensable for the construction of a professional sound recording studio OBJECTIVES 1 Familiarizing with current available materials construction methodologies 2 Exploring assessing the common errors made by designers while designing recording studios 3 How to eradicate these common errors in order to deliver a haute sound recording facility 4 How the scope of a designer architect can be defined in case of a recording studio 5 Essentials in terms of services like HVAC electrical plumbing lighting etc 6 Availability of any codes or regulations if any 7 A general understanding in the advancements of equipment in order to better understand the design requirements 8 A comparative study of various studios against the industry standards of constructing an ideal sound recording studio LIMITATIONS 1 The financial aspects of the system at commercial level are not covered 2 Lack of any equipment like sound meter etc METHODOLOGY In order to realize all the objectives one of the most

prominent yielding methodologies is to do case studies where not only the actual recording studios can be assessed analysed but also through interviewing the very people associated with such facilities a lot of information could be gathered The other ways is to go through the literature hitherto created on the history advancements of such studios can be studied

Manufacturers who are involved in the fabrication of acoustic material can also be of great help in the research regarding materials respective costs which in turn would help in understanding of the economics of a sound recording facility
