*Recycling of Polymers* Jaroslav Kahovec, 1998 Since polymers contribute a large volume to the waste streams they have become a particular source of concern with regard to environmental protection This volume is devoted to the recycling of polymers either by reusing them directly or by recovering their chemical or energy content **RAPRA Review Reports**

Rapra Technology Limited, **Life Cycle Assessment and Environmental Impact of Polymeric Products** T. J.

O'Neill, 2003 This review describes the process of life cycle analysis in some detail It describes the different organisations involved in researching and applying these techniques and the database resources being used to generate comparative reports The overview explains the factors to be considered the terminology the organisations involved in developing these techniques and the legislation which is driving the whole process forward The ISO standards relating to environmental management are also discussed briefly in the document Design for the environment is covered in the report This review is accompanied by summaries of selected papers on life cycle analysis and environmental impact from the Rapra Polymer Library database **Polymer Processing with Supercritical Fluids** Vanessa Goodship, Erich Ogur, 2004 SCFs are

currently the subjects of intense research and commercial interest Applications such as the RESS rapid expansion of supercritical fluid solutions process are part of standard industrial practice In view of their ever growing importance in the polymer industry there is a need to fully comprehend how supercritical fluids interrelate with polymeric materials to realise the potential that can be gained from their use The authors review the basic principles of SCFs and their application within the polymer industry characteristics and properties extraction of unwanted residual products polymerisation solvents and polymer impregnation Processing applications such as plasticisation foaming and blending are also considered There is discussion of the potential within the polymer recycling industry for use of SCFs as cleaning agents or within supercritical oxidation processes Around 400 references with abstracts from recent global literature accompany this review sourced from the Polymer Library to facilitate further reading A subject index and a company index are included **Polymer Blends** L.A.

Utracki, 2000 This report begins by summarising the basis of polymer blending This includes an outline of the techniques being used to characterise blends including spectroscopic techniques and rheometry The types of polymer blends which have been studied are outlined Methods of compatibilisation are discussed The morphology of the phases in a blend is critical to property development the types of morphology observed are described Flow induced morphology is described Processing of blends and the effects on morphology are discussed including extrusion thermoforming blow moulding injection moulding and foaming The accompanying abstracts from the Rapra Polymer Library database provide useful further information and indicate sources of additional material **IUPAC Handbook** International Union of Pure and Applied Chemistry, 1998

*Introduction to Plastics Recycling* Vanessa Goodship, 2007 As in the successful first edition this book provides straightforward information on plastic materials and technology including the options for recycling plastics with special focus

on mechanical recycling This new edition reflects the great strides that have been made to increase recycling rates worldwide in recent years It considers the expansion of infrastructure in the UK to support plastic recycling and major achievements that have been made in gaining widespread public support and participation for recycling schemes specifically the need to manage waste on an individual household level Current issues surrounding council recycling of plastic bottles and the practice of providing free plastic carrier bags by supermarkets are also considered Biopolymers are expected to have a major impact on plastic markets in the future and therefore some of the issues of biodegradability versus recycling are expanded in this second edition as is the wider context of life cycle analysis and legislation     Polystyrene J. R. Wünsch,2000 This review describes the production of styrene polymers in detail including the synthesis of raw materials polymerisation routes to polystyrene production of high impact polystyrene and anionic block copolymers The review also describes the mechanical properties of styrenic polymers their electrical properties and their behaviour in fire An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database gives useful references for further reading     The Year Book of the International Council of Scientific Unions International Council of Scientific Unions,1997     *Materials and Civilization* ,2004     *World Meetings Outside U.S.A. and Canada* ,1996     Index of Conference Proceedings British Library.
