Red Deer Behavior And Ecology Of Two Sexes:

Red Deer T. H. Clutton-Brock, F. E. Guinness, S. D. Albon, 1982-11-15 Red Deer Behavior and Ecology of Two Sexes is the most extensive study yet available of reproduction in wild vertebrate. The authors synthesize data collected over ten years on a population of individually recognizable red deer usually regarded as conspecific with the American elk. Their results reveal the extent of sex differences in behavior, reproduction and ecology and make a substantial contribution to our understanding of sexual selection. Homosexual Behaviour in Animals Volker Sommer, Paul L. Vasey, 2006-07-27 Behavioural observations from both the field and captivity indicate that same sex sexual interactions are widespread throughout the animal kingdom and occur quite frequently in certain non human species. Proximate studies of these phenomena have yielded important insights into genetic, hormonal and neural correlates. In contrast, there has been a relative paucity of research on the evolutionary aspects. Homosexual Behaviour in Animals seeks to readdress this imbalance by exploring animal same sex sexual behaviour from an evolutionary perspective. Contributions focus on animals that routinely engage in homosexual behaviour and include birds, dolphin, deer, bison and cats as well as monkey and apes such as macaques, gorillas and bonobos. A final chapter looks at human primates. This book will appeal to graduate students and researchers in evolutionary biology, biological anthropology, zoology, evolutionary psychology, animal behaviour and anyone interested in the current state of knowledge in this area of behavioural studies. *Advances in the Study of Behavior*, 1999-02-26 Advances in the Study of Behavior continues to serve scientists across a wide spectrum of disciplines. Focusing on new theories and research developments with respect to behavioral ecology, evolutionary biology and comparative psychology, these volumes foster cooperation and communication in these diverse fields. Sexual Segregation in Vertebrates Kathreen Ruckstuhl, Peter Neuhaus, 2006-01-05 Males and females often differ in developmental patterns, adult morphology, ecology and behaviour and in many mammals, males are often larger. Size dimorphism results in divergent nutritional and energetic requirements or reproductive strategies by the sexes which in turn sometimes causes them to select different forage, use different habitats and express differing social affinities. Such divergent life styles often lead males and females to live large parts of their lives separately. Sexual segregation is widespread in animals. Males and females may share the same habitat but at different times for example or they might use different habitats entirely. Why did sexual segregation evolve and what factors contribute to it? Sexual Segregation in Vertebrates explores these questions by looking at a wide range of vertebrates and is aimed as a synthesis of our current understanding and a guide for future research. Sexual Selection and the Origins of Human Mating Systems Alan F. Dixson, 2009-05-14 This book demonstrates how detailed comparative analyses of the anatomy, reproductive physiology and behaviour of non human primates and other mammals can offer profound insights into the origins of human sexual behaviour. *Animals' Influence on the Landscape and Ecological Importance* Friedrich-Karl Holtmeier, 2014-10-22 In its first English language edition, this book introduces the many faceted interactions of animal

populations with their habitats From soil fauna ants and termites to small and large herbivores burrowing mammals and birds the author presents a comprehensive analysis of animals and ecosystems that is as broad and varied as all nature Chapter 2 addresses the functional role of animals in landscape ecosystems emphasizing fluxes of energy and matter within and between ecosystems and the effects of animals on qualitative and structural habitat change Discussion includes chapters on the role of animal population density and the impacts of native herbivores on vegetation and habitats from the tropics to the polar regions Cyclic mass outbreaks of species such as the larch bud moth in Switzerland the mountain pine beetle and the African red billed weaver bird are described and analyzed Other chapters discuss Zoochory the dispersal of seeds by ants mammals and birds and the influence of burrowing animals on soil development and geomorphology Consideration extends to the impact of feral domestic animals Chapter 5 focuses on problems resulting from introduction of alien animals and from re introduction of animal species to their original habitats discusses the effects on ecosystems of burrowing digging and trampling by animals The author also addresses keystone species such as kangaroo rats termites and beavers Chapter 6 addresses the role of animals in landscape management and nature conservation with chapters on the impact of newcomer species such as animals introduced into Australia New Zealand and Europe and the consequences of reintroduction of species to original habitat It also discusses the carrying capacity of natural habit public attitudes toward conservation and more The final section ponders the effects of climate on interactions between animals and their habitats

Pillars of Evolution Douglas W. Morris, Per Lundberg, 2011-07-14 Pillars of Evolution provides a fresh and provocative perspective on adaptive evolution Readers new to the study of evolution will find a refreshing new insight that establishes evolutionary biology as a rigorous and predictive science whilst practicing biologists will discover a provocative book that challenges traditional approaches The book begins by leading readers through the mechanics of heredity reproduction movement survival and development With that framework in place it then explores the numerous ways that traits emerge from the interactions between genetics development and the environment The key message is that adaptive changes in traits and their underlying allelic frequencies evolve through the traits functions and their connection with fitness The complex mappings from genes to traits to fitness are characterized in the structure of evolution A single structure matrix describes why individuals vary in the values of adaptive traits their ability to perform the function of those traits and in the fitness they accrue Fitness depends on how organisms interact with and perceive their environment in time and space These relationships are made explicit in spatial temporal and organizational scale that also sets the stage for the crucially important role that ecology always plays in evolution The ecological hallmarks of density and frequency dependent interactions allow the authors to explore new and exciting insights into evolution s dynamics The theories and principles are then brought together in a final synthesis on adaptation The book s unique approach unites genetic development and environmental influences into a single comprehensive treatment of the eco evolutionary process *Animal Body Size* Felisa A. Smith, S.

Kathleen Lyons,2013-08-09 Galileo wrote that nature cannot produce a horse as large as twenty ordinary horses or a giant ten times taller than an ordinary man unless by miracle or by greatly altering the proportions of his limbs and especially of his bones a statement that wonderfully captures a long standing scientific fascination with body size Why are organisms the size that they are And what determines their optimum size This volume explores animal body size from a macroecological perspective examining species populations and other large groups of animals in order to uncover the patterns and causal mechanisms of body size throughout time and across the globe The chapters represent diverse scientific perspectives and are divided into two sections The first includes chapters on insects snails birds bats and terrestrial mammals and discusses the body size patterns of these various organisms The second examines some of the factors behind and consequences of body size patterns and includes chapters on community assembly body mass distribution life history and the influence of flight on body size

Comparative Psychology Mauricio Papini,2020-10-20 This revised third edition provides an up to date comprehensive overview of the field of comparative psychology integrating both evolutionary and developmental studies of brain and behavior This book provides a unique combination of areas normally covered independently to satisfy the requirements of comparative psychology courses Papini ensures thorough coverage of topics like the fundamentals of neural function the cognitive and associative capacities of animals the development of the central nervous system and behavior and the fossil record of animals including human ancestors This text includes many examples drawn from the study of human behavior highlighting general and basic principles that apply broadly to the animal kingdom New topics introduced in this edition include genetics epigenetics neurobiological and cognitive advances made in recent years into this evolutionary developmental framework An essential textbook for upper level undergraduate and graduate courses in comparative psychology animal behavior and evolutionary psychology developmental psychology neuroscience and behavioral biology

The Oxford Handbook of Evolutionary Perspectives on Violence, Homicide, and War Todd K. Shackelford,Viviana A. Weekes-Shackelford,2012-08-23 This volume synthesizes the theoretical and empirical work of leading scholars in the evolutionary sciences to produce an extensive and authoritative review of this literature

On the Move Sue Boinski,Paul A. Garber,2000-05-15 Getting from here to there may be simple for one individual But as any parent scout leader or CEO knows herding a whole troop in one direction is a lot more complicated Who leads the group Who decides where the group will travel and using what information How do they accomplish these tasks On the Move addresses these questions examining the social cognitive and ecological processes that underlie patterns and strategies of group travel Chapters discuss how factors such as group size resource distribution and availability the costs of travel predation social cohesion and cognitive skills affect how individuals as well as social groups exploit their environment Most chapters focus on field studies of a wide range of human and nonhuman primate groups from squirrel monkeys to Turkana pastoralists but chapters covering group travel in hyenas birds dolphins and bees provide a broad taxonomic perspective and offer new insights into comparative questions

such as whether primates are unique in their ability to coordinate group level activities *Bioenergetics Of Wild Herbivores* Robert J. Hudson, 2018-01-18 Bioenergetics is an emerging discipline which offers a more profound understanding of the ecology behaviour and evolution of wild herbivores Increasingly bioenergetic principles have been applied in management since they provide insight into population dynamics and are relevant to manipulation of habitats and assessment of the impacts of resource development Growing interest in the agricultural potential of wild herbivores has provided further impetus In spite of this promise there are few comprehensive syntheses of the concept and its application to wild herbivores This volume attempts to fill this need This book provides a great amount of detail but its expressive aim is to lead us to the whole animal to a herd to population as integral parts of an ecological entity which in turn is the result of evolutionary forces The concept of this book promises the realization of an overdue change in the approach to bioenergetics to nutrition and husbandry and thus to the management of wild herbivores the final emancipation from rules and views based primarily on domesticated herbivores or on experimental animals held under unnatural conditions necessarily impeding them behaviourally physically and psychically *The Behavioural Biology of Aggression* John Archer, 1988-04-29 Part of a new multidisciplinary series examining the functions and evolution of behaviour this book aims to elucidate the general principles underlying animal aggression The work divides forms of aggression according to function examining different species sexes and life cycle stages *The Role of Behavior in Evolution* Henry C. Plotkin, 1988 These six original essays focus on a potentially important aspect of evolutionary biology the possible causal role of phenotypic behavior in evolution Balancing theory with actual or potential empiricism they provide the first full examination of this topic Plotkin's opening chapter outlines the conceptual minefields that the contributors attempt to negotiate What is an adequate theory of evolution What is behavior and is it possible to maintain a distinction between behavior and other attributes of the phenotype is all or only a special subset of behavior both a cause and a consequence of evolution And what do the theoretical issues mean in empirical terms He concludes that any attempt to understand the causal role of behavior in evolution requires a more complicated theoretical structure than that of orthodox neoDarwinism a conceptualization of behavior as a distinctive set of phenotypic attributes and the accumulation of more data David L Hull Northwestern University provides an alternative account of the evolutionary process by developing a hierarchy of replicators interactors lineages to replace the traditional one of genes organisms species Robert N Brandon Duke University also posits hierarchy as an appropriate architecture for the theoretical complexity needed to support an examination of the role of behavior in evolution F J Odling Smee Brunei University outlines a theoretical structure to encompass the behavior of phenotypes concentrating on the unrestricted definition of behavior everything that an animal does The remaining chapters are as much concerned with evidence as with theory Plotkin concentrates on a restricted definition of behavior behavior that is a product of choosing intelligence reviewing our empirical knowledge of how learning might influence evolution R I M Dunbar University College London uses empirical studies of

vertebrate social behavior to deal with the question of how the social systems especially of primates might have a causal role in species evolution A Bradford Book **Essays in Animal Behaviour** Jeffrey R. Lucas, Leigh W. Simmons, 2005-11-07

distinguished scholars from different and specialized disciplines discuss aspects of sex gender and gender and society In his contribution to this series of essays on Gender and Society Peter Goodfellow states sex the biological separation into male and female is controlled by DNA and is determined by DNA Gender the arbitrary social division between masculine and feminine is a social construct that involves interaction between an individual and society The definition of gender offered by Goodfellow is cogently developed by Germaine Greer in her essay on women as victims of rape Some of the newest and most controversial aspects of modern criminology Susan Watkins suggests that the understanding of gender has influenced the analysis of population change the efforts by activists to ensure reductions in fertility internationally and the acceptance of birth control in local communities in Kenya This analysis is complimented by Michele Le Doeuff in a discussion of the complex interplay between reduced fertility increased literacy and the function of work in the everyday life of every woman whatever her social class or level of education The question of how the sexes differ in their perception and processing of information about their external world is tackled by Lucia Jacobs within a biological and evolutionary context She proposes that sexual selection should be given credit for the rapid evolution of our unique abilities and complex culture concluding that it is the female that is the smaller the ecological sex best adapted to survive in the ecological niche of the species and it is the

male who carries the heavier burden or handicap of sexual selection his fitness dependent on arbitrary traits that reduce his competitive ability as a human being although they are all too necessary for his competitive ability as a man The contribution of the sociobiologist Sarah Hrdy focussed on sexual selection drawing on a wide range of research on the physiological and behavioural responses of subhuman primates but appropriately drawing her inspiration from Spencer's own writings on physical beauty and its consequences for posterity The chapters in this book were originally delivered as The Herbert Spencer Lectures in 1995 at Oxford University

Animal Behavior Ken Yasukawa, 2014-01-22 Discover why animals do what they do based on their genes physiologies cultures traditions survival and mating advantages and evolutionary histories and find out how studying behavior in the animal world helps us understand human behavior The three volumes of Animal Behavior How and Why Animals Do the Things They Do cover the breadth of the field addressing causation development function and evolution in a wide range of animals from invertebrates to humans Inspired by Nobel laureate Nikolaas Tinbergen's work the first two volumes follow Tinbergen's four classic questions of animal behavior while the third volume supplies integrated examples of Tinbergen's investigative process applied in specific cases Written in an engaging accessible manner ideal for college students as well as general audiences this evidence based collection provides a fascinating tour of animal behaviorists findings such as how animal communication can be truthful or deceitful the deadly serious business behind clashes in the battle of the sexes and how documentation of animal behavior can lead to a deeper understanding of human behavior Each chapter provides both historical background and information about current developments in animal behavior knowledge

Maternal Effects in Mammals Dario Maestriperi, Jill M. Mateo, 2009-08-01 Evolutionary maternal effects occur whenever a mother's phenotypic traits directly affect her offspring's phenotype independent of the offspring's genotype Some of the phenotypic traits that result in maternal effects have a genetic basis whereas others are environmentally determined For example the size of a litter produced by a mammalian mother a trait with a strong genetic basis can affect the growth rate of her offspring while a mother's dominance rank an environmentally determined trait can affect the dominance rank of her offspring The first volume published on the subject in more than a decade Maternal Effects in Mammals reflects advances in genomic ecological and behavioral research as well new understandings of the evolutionary interplay between mothers and their offspring Dario Maestriperi and Jill M Mateo bring together a learned group of contributors to synthesize the vast literature on a range of species highlight evolutionary processes that were previously overlooked and propose new avenues of research Maternal Effects in Mammals will serve as the most comprehensive compendium on and stimulus for interdisciplinary treatments of mammalian maternal effects

Nourishment Fred Provenza, 2018 Reflections on feeding body and spirit in a world of change Animal scientists have long considered domestic livestock to be too dumb to know how to eat right but the lifetime research of animal behaviorist Fred Provenza and his colleagues has debunked this myth Their work shows that when given a choice of natural foods livestock have an

astoundingly refined palate nibbling through the day on as many as fifty kinds of grasses forbs and shrubs to meet their nutritional needs with remarkable precision In *Nourishment* Provenza presents his thesis of the wisdom body a wisdom that links flavor feedback relationships at a cellular level with biochemically rich foods to meet the body's nutritional and medicinal needs Provenza explores the fascinating complexity of these relationships as he raises and answers thought provoking questions about what we can learn from animals about nutritional wisdom What kinds of memories form the basis for how herbivores and humans recognize foods Can a body develop nutritional and medicinal memories in utero and early in life Do humans still possess the wisdom to select nourishing diets Or has that ability been hijacked by nutritional authorities Consumers eager for a quick fix have empowered the multibillion dollar a year supplement industry but is taking supplements and enriching and fortifying foods helping us or is it hurting us On a broader scale Provenza explores the relationships among facets of complex poorly understood ever changing ecological social and economic systems in light of an unpredictable future To what degree do we lose contact with life sustaining energies when the foods we eat come from anywhere but where we live To what degree do we lose the mythological relationship that links us physically and spiritually with Mother Earth who nurtures our lives Provenza's paradigm changing exploration of these questions has implications that could vastly improve our health through a simple change in the way we view our relationships with the plants and animals we eat Our health could be improved by eating biochemically rich foods and by creating cultures that know how to combine foods into meals that nourish and satiate Provenza contends the voices of authority disconnect most people from a personal search to discover the inner wisdom that can nourish body and spirit That journey means embracing wonder and uncertainty and avoiding illusions of stability and control as we dine on a planet in a universe bent on consuming itself
