Red Dwarf Better Than Life Abridged:

The Life of Stars Giora Shaviv, 2009-10-03 It is the stars The stars above us govern our conditions William Shakespeare King Lear A Few Words about What Why and How The structure of the stars in general and the Sun in particular has been the subject of extensive scientific research and debate for over a century The discovery of quantum theory during the first half of the nineteenth century provided much of the theoretical background needed to understand the making of the stars and how they live off their energy source Progress in the theory of stellar structure was made through extensive discussions and controversies between the giants of the field as well as brilliant discoveries by astronomers In this book we shall carefully expose the building of the theory of stellar structure and evolution and explain how our understanding of the stars has emerged from this background of incessant debate About hundred years were required for astrophysics to answer the crucial questions What is the energy source of the stars How are the stars made How do they evolve and eventually die The answers to these questions have profound implications for astrophysics physics and biology and the question of how we ourselves come to be here While we already possess many of the answers the theory of stellar structure is far from being complete and there are many open questions for example concerning the mechanisms which trigger giant supernova explosions Many internal hydrodynamic processes remain a mystery Yet some global pictures can indeed be outlined and this is what we shall attempt to do here
