Séminaire de Théorie des Nombres, Paris 1987-88 Goldstein,2012-12-06 *Representation Theory of Finite Groups and Finite-Dimensional Algebras* Michler,Ringel,2012-12-06 From April 1 1984 until March 31 1991 the Deutsche Forschungsgemeinschaft has sponsored the project Representation Theory of Finite Groups and Finite Dimensional Algebras The proposal for this project was submitted by B Huppert Mainz B Fischer Bielefeld G Michler Essen H Pahlings Aachen and C M Ringel Bielefeld in order to strengthen the interaction between the different research areas in representation theory The Deutsche Forschungsgemeinschaft has given many research positions and fellowships for young algebraists enabling them to do research at their own universities or as visitors at well known research institutions in America Australia England

and France The whole project benefitted very much from an extensive exchange programme between German and American scientists sponsored by the Deutsche Forschungsgemeinschaft and by the National Science Foundation of the United States This volume presents lectures given in a final conference and reports by members of the project It is divided into two parts The first part contains seven survey articles describing recent advances in different areas of representation theory These articles do not only concentrate on the work done by the German research groups but also inform on major developments of the subject at all The volume omits those topics already treated in book form In particular it does not contain a survey on K

Effective Methods in Algebraic Geometry T. Mora, C. Traverso, 2012-12-06 The symposium MEGA 90 Effective Methods in Algebraic Geometry was held in Castiglioncello Livorno Italy in April 17-21 1990 The themes we quote from the Call for papers were the following Effective methods and complexity issues in commutative algebra projective geometry real geometry algebraic number theory Algebraic geometric methods in algebraic computing Contributions in related fields computational aspects of group theory differential algebra and geometry algebraic and differential topology etc were also welcome The origin and the motivation of such a meeting that is supposed to be the first of a series deserves to be explained The subject the theory and the practice of computation in algebraic geometry and related domains from the mathematical viewpoint has been one of the themes of the symposia organized by SIGSAM the Special Interest Group for Symbolic and Algebraic Manipulation of the Association for Computing Machinery SAME Symbolic and Algebraic Manipulation in Europe and AAEECC the semantics of the name is varying an average meaning is Applied Algebra and Error Correcting Codes

Geometry and Spectra of Compact Riemann Surfaces Peter Buser, 2010-10-29 This monograph is a self contained introduction to the geometry of Riemann Surfaces of constant curvature 1 and their length and eigenvalue spectra It focuses on two subjects the geometric theory of compact Riemann surfaces of genus greater than one and the relationship of the Laplace operator with the geometry of such surfaces Research workers and graduate students interested in compact

Harmonic Analysis on

Reductive Groups W. Barker, P. Sally, 2012-12-06 A conference on Harmonic Analysis on Reductive Groups was held at Bowdoin College in Brunswick Maine from July 31 to August 11 1989 The stated goal of the conference was to explore recent advances in harmonic analysis on both real and p adic groups It was the first conference since the AMS Summer Symposium on Harmonic Analysis on Homogeneous Spaces held at Williamstown Massachusetts in 1972 to cover local harmonic analysis on reductive groups in such detail and to such an extent While the Williamstown conference was longer three weeks and somewhat broader nilpotent groups solvable groups as well as semisimple and reductive groups the structure and timeliness of the two meetings was remarkably similar The program of the Bowdoin Conference consisted of two parts First there were six major lecture series each consisting of several talks addressing those topics in harmonic analysis on real and p adic groups which were the focus of intensive research during the previous decade These lectures began at an introductory level and advanced to the current state of research Second there was a series of single lectures in which the speakers presented an overview of their latest research

Radon Integrals B. Anger, C. Portenier, 2012-12-06 In topological measure theory Radon measures are the most important objects In the context of locally compact spaces there are two equivalent canonical definitions As a set function a Radon measure is an inner compact regular Borel measure finite on compact sets As a functional it is simply a positive linear form defined on the vector lattice of continuous real valued functions with compact support During the last few decades in particular because of the developments of modern probability theory and mathematical physics attention has been focussed on measures on general topological spaces which are no longer locally compact e.g. spaces of continuous functions or Schwartz distributions For a Radon measure on an arbitrary Hausdorff space essentially three equivalent definitions have been proposed As a set function it was defined by L. Schwartz as an inner compact regular Borel measure which is locally bounded G. Choquet considered it as a strongly additive right continuous content on the lattice of compact subsets Following P. A. Meyer N. Bourbaki defined a Radon measure as a locally uniformly bounded family of compatible positive linear forms each defined on the vector lattice of continuous functions on some compact subset

Pseudodifferential Operators and Nonlinear PDE Michael Taylor, 1991-11-01 For the past 25 years the theory of pseudodifferential operators has played an important role in many exciting and deep investigations into linear PDE Over the past decade this tool has also begun to yield interesting results in nonlinear PDE This book is devoted to a summary and reconsideration of some used of pseudodifferential operator techniques in nonlinear PDE The book should be of interest to graduate students instructors and researchers interested in partial differential equations nonlinear analysis in classical mathematical physics and differential geometry and in harmonic analysis

Diophantine Approximation Wolfgang M. Schmidt, 1970

Diophantine Approximation David Masser, Yuri V. Nesterenko, Hans Peter Schlickewei, Wolfgang M. Schmidt, Michel Waldschmidt, 2008-02-01 Diophantine Approximation is a branch of Number Theory having its origins in the problem of producing best rational approximations to given real numbers Since the early work of Lagrange on Pell's equation and the pioneering work of Thue on the rational approximations to algebraic numbers of degree 3 it has been clear how in addition to its own specific importance and interest the theory can have fundamental applications to classical diophantine problems in Number Theory During the whole 20th century until very recent times this fruitful interplay went much further also involving Transcendental Number Theory and leading to the solution of several central conjectures on diophantine equations and class number and to other important achievements These developments naturally raised further intensive research so at the moment the subject is a most lively one This motivated our proposal for a C I M E session with the aim to

make it available to a public wider than specialists an overview of the subject with special emphasis on modern advances and techniques Our project was kindly supported by the C I M E Committee and met with the interest of a large number of applicants forty two participants from several countries both graduate students and senior mathematicians intensively followed courses and seminars in a friendly and co operative atmosphere The main part of the session was arranged in four six hours courses by Professors D Masser Basel H P Schlickewei Marburg W M Schmidt Boulder and M Waldschmidt Paris VI This volume contains expanded notes by the authors of the four courses together with a paper by Professor Yu V
