Serial Learning And Paralearning:

Serial Learning and Paralearning Eugene Rae Harcum, 1975 **A Psychology for People of God** E. Rae Harcum, 2012-04-19 This book combats the anti religious sentiment of some psychologists It argues that Christians do not have to give up their religious faith to keep the contributions of science A science compatible with religion accepts that human beings have freedom of will to select behaviors and that all methods of studying human behavior are acceptable Both of these premises are accepted by a modern view of science which recognizes its inherent subjectivity E Rae Harcum explicitly asserts the important role of spirituality in psychology especially in psychotherapy The book confronts the relation between the human body and its non material parts the mind and spirit and provides a way of looking at these metaphysical issues A Psychology for People of God promotes the need of the Christian to love and to care for his or her fellows After all fitness for survival entails the willingness to serve **Technical Report** , 1979 Children's Logical and Mathematical Cognition C.J. Brainerd, 2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books to be devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors The flagship for the Springer Series will be a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Each volume in the Progress sequence will be strongly thematic in that it will be limited to some well defined domain of cognitive developmental research e g logical and mathematical development semantic development All Progress volumes will be edited collections Editors of such collections upon consultation with the Series Editor may elect to have their books published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors will be published as separate volumes within the series A fairly broad definition of cognitive development is being used in the selection of books for this series **Visual Perception and Action in Sport** Keith Davids, A Mark Williams, John G. Williams, 2005-08-10 Athletes are dependent upon a constant supply of accurate and reliable information from the environment whilst performing complex movements Visual Perception and Action in Sport examines the information which is perceived by the human visual system and the way it is utilised to support actions in sport It focuses attention on the rich diversity of sport related studies drawn together from a number of theoretical approaches Divided into three sections this book covers indirect theories of perception and action direct theories of perception and action skill acquisition in the sports context Each of the sections features learning objectives summary and study questions to help facilitate student learning Throughout the text the integration of theoretical knowledge and practical expertise is emphasised All three authors

are specialists have expertise in the teaching and researching of motor learning and control in sport Visual Perception and Action in Sport A. Mark Williams, Keith Davids, John Garrett Pascoe Williams, 1999 This book provides a detailed review of much of the existing research on visual perception and sports performance It summarises and integrates the findings of up to five hundred articles from areas as diverse as cognitive and ecological psychology *Temporal Codes for Memories (PLE: Memory)* Benton Underwood, 2014-05-09 Given two events both of which are well remembered can we specify which event occurred first If so how For example did Nixon resign before or after Billie Jean King beat Bobby Riggs Originally published in 1977 little was known about the accuracy of temporal codes for memories and still less about the nature of the codes This volume addresses the central question of the mechanisms by which order information is attached to memories The results of sixteen previously unpublished experiments indicate the role of some independent variables on temporal coding in relatively short term memory and in long term memory Several experiments in which changes in proactive inhibition are used as an index of temporal differentiation show that the nature of the words making up the lists is involved fundamentally in temporal coding Other experiments demonstrate that in relatively short term memory a subject cannot learn to improve his performance in estimating how far apart in time two events occurred Still other experiments show that recency judgments for two events improve with practice but the improvement is independent of the temporal separation The context in which memories are established is shown to influence temporal codes only if an ordering metric is part of the context The author advances several theoretical propositions to account for the various findings In doing so he has given initial structuring for subsequent research to a neglected area This volume will still be of significant interest to all those interested in learning and memory **The American Journal of Psychology** Granville Stanley Hall, Edward Bradford Titchener, Karl M. Dallenbach, Madison Bentley, Edwin Garrigues Boring, Margaret Floy Washburn, 1978 *Correctional Rehabilitation and Management* Teodoro Ayllon, Michael A. Milan, 1979 *Catalog of Copyright Entries. Third Series* Library of Congress. Copyright Office, 1977 **Human Memory** Ian Neath, 1998 In this up to date book author Ian Neath offers readers an exploration of the wonders of accumulated knowledge With an emphasis on theory and models as well as on research Neath maintains an ideal balance between historically significant findings and current state of the art research He illustrates the process of designing and conducting diagnostic research and in the process gives readers an appreciation of experimental design The various theories of memory are introduced with an examination of how each has been developed and evaluated Memory and Learning David S. Gorfein, 1987 First published in 1987 Routledge is an imprint of Taylor Francis an informa company *Divided Consciousness* Ernest R. Hilgard, 1986-05-12 A seminal work on the unconscious and its mechanisms Examines the interaction between voluntary conscious and involuntary unconscious human control mechanisms in terms of dissociation of divided consciousness Delineates a neodissociation interpretation that recognizes historical roots without requiring commitment Presents a wide range of data on possession states fugues multiple personalities amnesia dreams

hallucinations automatic writing and aggressions Fundamentals of Scaling and Psychophysics John C. Baird, Elliot Jason Noma, 1978 **Subject Catalog, 1975** Library of Congress, 1975 **Library of Congress Catalogs** Library of Congress, 1976 **The British National Bibliography** Arthur James Wells, 1968 **Psychology for Daily Living** Eugene Rae Harcum, 1979 **Annual Review of Psychology** Calvin Perry Stone, 1977 Publishes original critical reviews of the significant literature and current developments in psychology *Phenomenology and Psychological Research* Amedeo Giorgi, 1985 This book is both a theoretical justification of a phenomenological and human scientific approach to psychological research and a presentation of findings in the areas of cognitive clinical and social psychology The book is important because it is the most sustained statement to date about a phenomenological approach to psychological research along with original findings to compare with mainstream psychology in crucial areas of psychology cognitive clinical and social psychology Phenomenology and Psychological Research is further clarification of the phenomenological approach to psychological research along with examples of application in four different content areas learning and thinking both examples of alternative approaches to cognitive processes self deception clinical psychology and criminal victimization social psychology As such it gives the reader who is merely curious about the possibilities of phenomenological approaches a good opportunity to evaluate its fruitfulness whereas those who are already sympathetic to the approach will find a greater articulation of the theory behind the procedures Lastly the reader will find in this study an example of a descriptive and qualitative approach to psychological research that claims to meet both phenomenological and human scientific criteria It is one of the first books to make such a claim about psychological research
