Lewis,1992 The ability of an organism to combat infection by foreign particles and microbial pathogens is essential for its survival and evolutionary success Such efforts at immunity can take two forms A considerable number of works have been published which focus on the central role of antigen recognition and antibody structure and function in the host response to infection This volume however discusses the recent shift in focus towards the natural or innate immune system which consists of various cell types and factors These cells and factors can take part in immune responses without prior sensitization and have important modulatory effects on later specific responses This work reviews the biology and function of the natural killer cell covering such topics as the molecular basis of natural killer cell function and its role in viral infection tumor biology and transplantation Graduate students and researchers in immunology cell biology and medicine will find this work a valuable resource on current research in this exciting field      **Pancreatic Tumors in Children** G. Bennett Humphrey,Gerald B. Grindey,Louis P. Dehner,Ronald T. Acton,Theodore J. Pysher,2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more      **Immunobiology of Natural Killer Cells** ,1986
