Natural Language Parsing Systems:

Natural Language Parsing Systems Leonard Bolc, 2012-12-06 Up to now there has been no scientific publication on natural language research that presents a broad and complex description of the current problems of parsing in the context of Artificial Intelligence. However, there are many interesting results from this domain appearing mainly in numerous articles published in professional journals. In view of this situation, the objective of this book is to enable scientists from different countries to present the results of their research on natural language parsing in the form of more detailed papers than would be possible in professional journals. This book thus provides a collection of studies written by well-known scientists whose earlier publications have greatly contributed to the development of research on natural language parsing. Jaime G. Carbonell and Philip J. Hayes present in their paper *Robust Parsing Using Multiple Construction Specific Strategies* two small experimental parsers implemented to illustrate the advantages of a multi-strategy approach to parsers with strategies selected according to the type of construction being parsed at any given time. This presentation is followed by the description of a parsing algorithm integrating some of the best features of the two smaller parsers including case frame instantiation and partial pattern matching strategies.

Natural Language Processing and Information Systems Farid Meziane, 2004-08-13 This book constitutes the refereed proceedings of the 9th International Conference on Applications of Natural Language to Information Systems (NLDB 2004) held in Salford, UK, in June 2004. The 29 revised full papers and 13 revised short papers presented were carefully reviewed and selected from 65 submissions. The papers are organized in topical sections on natural language conversational systems, intelligent querying, linguistic aspects of modeling, information retrieval, natural language text understanding, knowledge bases, knowledge management, and content management.

Natural Language Processing and Information Systems Gosse Bouma, Ashwin Ittoo, Elisabeth Métais, Hans Wortmann, 2012-06-22 This book constitutes the refereed proceedings of the 17th International Conference on Applications of Natural Language to Information Systems held in Groningen, The Netherlands, in June 2012. The 12 full papers, 24 short papers, and 16 poster papers presented in this volume together with a full paper length invited talk were carefully reviewed and selected from 90 submissions. The rapidly evolving state of the art in NLP and the shifting interest to applications targeting document and data collections available on the Web, including an increasing amount of user-generated content, is reflected in the contributions to this book. Topics covered are information retrieval, text classification and clustering, summarization, normalization of user-generated content, forensic NLP, ontologies, and natural language sentiment analysis, question answering, and information extraction, terminology, and named entity recognition, and NLP tools development.
