Natural Particulars:

Natural Particulars Anthony Grafton, Nancy G. Siraisi, 1999 Recently the history of science in early modern Europe has been both invigorated and obscured by divisions between scholars of different schools One school tends to claim that rigorous textual analysis provides the key to the development of science whereas others tend to focus on the social and cultural contexts within which disciplines grew This volume challenges such divisions suggesting that multiple historical approaches are both legitimate and mutually complementary *Tradition, Rationality, and Virtue* Thomas D. D'Andrea, 2017-09-29 Tradition Rationality and Virtue provides the first comprehensive and detailed treatment of the work of Alasdair MacIntyre In this book Thomas D Andrea presents an accessible critical study of the full range of MacIntyre's thought across ethical theory psychoanalytic theory social and political philosophy Marxist theory and the philosophy of religion Moving from the roots of MacIntyre's thought in ethical inquiry this book examines MacIntyre's treatment of Marx Christianity and the nature of human action and discusses in depth the development and applications of MacIntyre's After Virtue project The book culminates in an examination of major internal and external criticisms of MacIntyre's work and a consideration of its future directions Natural and Conventional Meaning Bernard E. Rollin, 2019-10-08 No detailed description available for Natural and Conventional Meaning **Classifying Reality** David S. Oderberg, 2013-02-25 Distinguished metaphysicians examine issues central to the high profile debate between philosophers over how to classify the natural world and discuss issues in applied ontology such as the classification of diseases Leading metaphysicians explore fundamental questions related to the classification and structure of the natural world An essential commentary on issues at the heart of the contemporary debate between philosophy and science Interweaves discussion of overarching themes with detailed material on applied ontology Secrets and Knowledge in Medicine and Science, 1500-1800 Alisha Rankin, 2016-04-01 Secrets played a central role in transformations in medical and scientific knowledge in early modern Europe As a new fascination with novelty began to take hold from the late fifteenth century Europeans thirsted for previously unknown details about the natural world new plants animals and other objects from nature new recipes for medical and alchemical procedures new knowledge about the human body and new facts about the way nature worked These secrets became popular items of commerce and trade as the quest for new and exclusive bits of information met the vibrant early modern marketplace Whether disclosed widely in print or kept more circumspect in manuscripts secrets helped drive an expanding interest in acquiring knowledge throughout early modern Europe Bringing together international scholars this volume provides a pan European and interdisciplinary overview on the topic Each essay offers significant new interpretations of the role played by secrets in their area of specialization Chapters address key themes in early modern history and the history of medicine science and technology including the possession circulation and exchange of secret knowledge across Europe alchemical secrets and laboratory processes patronage and the upper class market for secrets medical secrets and

the emerging market for proprietary medicines secrets and cosmetics secrets and the body and finally gender and secrets

Conservation Reconsidered Charles T. Rubin, 2000 The prominent contributors in *Conservation Reconsidered* establish a fundamentally original view of the conservation movement and the impact of public policy on nature This collection of essays articulate the belief that the thinkers and actors who helped develop the conservation movement notably John Muir Theodore Roosevelt Gifford Pinchot and Aldo Leopold have been seriously misunderstood by scholars who have analyzed them in the context of contemporary environmental debates Conservationism the contributors argue was a diverse movement dealing with difficult questions about the relationship of human beings to nature in a modern liberal democratic state The essays place conservationism within the framework of 19th century American political thinkers including Darwin Emerson Thoreau and Olmsted and they illuminate perennial questions about citizenship and our place in the natural world *Conservation Reconsidered* takes a new look at what is problematic about the legacy of American conservationism and explores worthy alternatives to the dominant environmentalist thinking of today

Civic Medicine J. Andrew Mendelsohn, Annemarie Kinzelbach, Ruth Schilling, 2019-07-30 Communities great and small across Europe for eight centuries have contracted with doctors Physicians provided citizen care helped govern and often led in public life *Civic Medicine* stakes out this timely subject by focusing on its golden age when cities rivaled territorial states in local and global Europe and when civic doctors were central to the rise of shared organized written information about the human and natural world This opens the prospect of a long history of knowledge and action shaped more by community and responsibility than market or state exchange or power
