The Natural Rate of Unemployment Rod Cross,1995-06-22 For 25 years theory about the causes of and possible solutions to the problem of unemployment has been dominated by Phelps and Friedman's natural rate of unemployment hypothesis This postulates that the equilibrium rate of unemployment consistent with steady inflation is determined by structural variables sustainable reductions in unemployment can be achieved only by measures to change underlying microeconomic structures such as benefit and pay bargaining systems Belief in the hypothesis has faltered since the 1980s the hypothesis being unable to explain the dramatic upward shifts in European unemployment rates These essays reflect upon the fundamental structures underlying the hypothesis assess the related evidence and look forwards suggesting possible modifications In contrast to the single rate postulated by the natural rate hypothesis several of the contributors propose that there are ranges of unemployment rates consistent with steady inflation

The Econometrics of Macroeconomic Modelling Gunnar

Bårdsen, Øyvind Eitrheim, Eilev Jansen, Ragnar Nymoen, 2005-04-14 Macroeconometric models in many ways the flagships of the economist's profession in the 1960s came under increasing attack from both theoretical economist and practitioners in the late 1970s Critics referred to their lack of microeconomic theoretical foundations ad hoc models of expectations lack of identification neglect of dynamics and non stationarity and poor forecasting properties By the start of the 1990s the status of macroeconometric models had declined markedly and had fallen completely out of and with academic economics Nevertheless unlike the dinosaurs to which they often have been likened macroeconometric models have never completely disappeared from the scene This book describes how and why the discipline of macroeconometric modelling continues to play a role for economic policymaking by adapting to changing demands in response for instance to new policy regimes like inflation targeting Model builders have adopted new insights from economic theory and taken advantage of the methodological and conceptual advances within time series econometrics over the last twenty years The modelling of wages and prices takes a central part in the book as the authors interpret and evaluate the last forty years of international research experience in the light of the Norwegian main course model of inflation in a small open economy The preferred model is a dynamic model of incomplete competition which is evaluated against alternatives as diverse as the Phillips curve Nickell Layard wage curves the New Keynesian Phillips curve and monetary inflation models on data from the Euro area the UK and Norway The wage price core model is built into a small econometric model for Norway to analyse the transmission mechanism and to evaluate monetary policy rules The final chapter explores the main sources of forecast failure likely to occur in a practical modelling situation using the large scale model RIMINI and the inflation models of earlier chapters as case studies
