Haab Ph.D., John C. Whitehead, 2014-03-28

Accessible to students and practitioners without an advanced degree in environmental economics this essential reference work pinpoints the role of the economy in both creating and solving many of the world's most pressing environmental challenges. Given the number and scope of environmental problems we face today everyone from high school students to policy makers to concerned citizens should understand how the economy works and grasp how meltdowns both economic and environmental in nature can be avoided. *Environmental and Natural Resource Economics: An Encyclopedia* offers the critical information needed to comprehend these complex issues. The entries cover topics in a manner parallel to how environmental economics is commonly taught addressing basic concepts environmental policy natural resource economics market failure exhaustible and renewable resources benefit cost analysis and applied welfare economics. Additionally the book includes entries on key concepts of economics movements events organizations important individuals and research areas relevant to the study of environmental and natural resource economics. This work stands alone as the only title currently offering such a breadth of coverage and level of detail written specifically for readers without specialized knowledge of environmental economics *Development of the Dynamic Agro-Economic Soil Salinity (DASS) Model*, 1990

Rethinking Sustainability Jonathan Mark Harris, 2009-11-12 Bringing together the thoughts of economists political scientists anthropologists philosophers and agricultural policy professionals this volume focuses on the issues of sustainability in development. Examining such topics as international trade political power gender roles legal institutions and agricultural research the contributors focus on the missing links in theory and practice that have been barriers to the achievement of truly sustainable development. Any theory of sustainable development must take into account economic social and environmental dimensions. Until recently the question What is development was often answered predominantly from the economist's perspective with high priority being assigned to expansion of economic output. Social political institutional and ethical aspects have often been neglected. But now that sustainable development has become a broadly accepted concept it is

impossible to maintain a narrowly economic view of development For this reason the varied perspectives offered by the contributors to this volume are crucial to understanding the process of development as it relates to environmental sustainability and human well being The selection of articles is meant to be stimulating and provocative rather than comprehensive They are roughly divided between those dealing with broad theoretical issues concerning the economic political and social aspects of development Part I and those presenting more applied analysis Part II The common thread is a concern for examining which factors contribute to making development socially just and environmentally sound Rethinking Sustainability will be of interest to economists and social scientists development professionals and instructors seeking to offer their students a broad perspective on development issues Jonathan Harris is Senior Research Associate Global Development and Environment Institute at Tufts University as well as Adjunct Associate Professor of International Economics at Tufts University Fletcher School of Law

Linking the Natural Environment and the Economy: Essays from the Eco-Eco Group Carl Folke, Tomas Kåberger, 2013-11-09

Natural Resource Pricing and Rents Andrey Vavilov, Georgy Trofimov, 2021-08-03 This book examines the economics of natural resource markets and pricing as well as the field of natural resource economics in general It presents the key contributions to this field of research including the pioneering works and contemporary studies The book highlights the basic principles and ideas underlying theoretical models of resource pricing The models considered in the book underline the fundamental determinants of resource prices and the economic nature of rents for non renewable and renewable resources Besides the classical theory of exhaustible resource economics the book includes several issues that are of high importance for global economic growth such as the transition to alternative energy and the economics of climate change The authors also consider the issues of commodity pricing and a resource cartel's activity that are relevant to the world oil market The book provides analytical solutions illustrated with numerical examples It allows an intuitive understanding of the subject and the model inferences through graphical illustrations and an informal introduction It therefore is a must read for everybody interested in a better understanding of resource prices resource markets and resource economics

[Estimating Economic Values for Nature](#) Vincent Kerry Smith, 1996-06 Estimating Economic Values for Nature presents in one volume a collection of V Kerry Smith's papers prepared over 25 years dealing with the theory and practice of non market valuation for environmental resources Taken together the papers explore the conceptual basis the implementation process and empirical performance of all available methods of measuring economic values for the services of nature and how these values are constructed from people's choices The issues discussed in this volume include travel cost recreation demand averting behaviour household production hedonic property value hedonic wage and contingent valuation methods These essays describe what has been learned from past benefit analysis using meta analysis as well as the issues at the frontier of current research in the area This important volume will be welcomed by environmental and public economists as well as practitioners of cost benefit analysis as an authoritative and comprehensive

discussion of non market valuation Biodiversity Conservation C. A. Perrings, 2012-12-06 This volume is one of a number of publications to carry the results of the first research programme of the Royal Swedish Academy of Science s Beijer Institute The Institute was formed in 1991 in order to promote interdisciplinary research between natural and social scientists on the interdependency between economic and ecological systems In its first research programme the Biodiversity Programme the Institute brought together a number of leading economists and ecologists to address the theoretical and policy issues associated with the current high rates of biodiversity loss in such systems whether the result of direct depletion the destruction of habitat or specialisation in agriculture forestry and fisheries l This volume reports some of the more policy oriented work carried out under the programme The broad aim of the programme is to further our understanding of the causes and consequences of biodiversity loss and to identify the options for addressing the problem The results have turned out to be surprising to those who see biodiversity loss primarily in terms of the erosion of the genetic library In various ways the work carried out under the programme has already begun to alter our perception of where the problem in biodiversity loss lies and what policy options are available to deal with it Indeed the programme has provided a powerful set of arguments for reappraising not just the economic and ecological implications of biodiversity loss but the whole case for development based on specialisation of resource use
